2006 4th IEEE/IFIP Workshop on
End-to-End Monitoring Techniques and Services

3 – 7 April 2006

Vancouver, BC, Canada
Table of Contents

Preface ........................................................................................................ i
Workshop Co-chairs and Program Committee ....................................... iii
Reviewers ................................................................................................... iv

Traffic Monitoring and Data Mining

A Hybrid Approach for Accurate Application Traffic Identification .... 1
Young Won, Byung-Chul Park, James Hong (POSTECH),
Hong-Toek Ju (Keimyung University),
Myung Sup Kim (University of Toronto)

Object-Relational DBMS for Packet-Level Traffic Analysis:
Case Study on Performance Optimization .............................................. 9
Matti Siekkinen (Institut Eurecom), Vera Goebel (University of Oslo),
Ernst Biersack (Institut Eurecom)

How to Identify the Speed Limiting Factor of a TCP Flow ............... 17
Mark Timmer, Piet-Jerk de Boer, Atko Pras (University of Twente)

Active Probing Approach for Fault Localization in Computer
Networks .................................................................................................. 25
Maitreya Natu, Adarsh Sethi (University of Delaware)

Real-time Monitoring

Implementation and evaluation of an inline network measurement
algorithm and its application to TCP-based service ............................ 34
Tomoaki Tsugawa, Go Hasegawa, Masayuki Murata (Osaka University)

Implementation and Evaluation of a Protocol for Detecting
Network-Wide Threshold Crossing Alerts ............................................. 42
Fetah Wuhib, Rolf Stadler (KTH Royal Institute of Technology),
Alexander Clemm (Cisco Systems)

A Classification Scheme for Evaluating Management Instrumentation
in Distributed Middleware Infrastructure ............................................. 50
Fariaz Karim (Intel Corporation)
Path Characteristics Monitoring

Tuning the Temporal Characteristics of a Kalman-Filter Method for End-to-End Bandwidth Estimation ........................................ 58
Erik Hartikainen (Linkoping University), Svante Ekelin (Ericsson Research)

ICIM: An Inline Network Measurement Mechanism for Highspeed Networks ........................................................................... 66
Cao LeThanhMan, Go Hasegawa (Osaka University)

An Analysis of Active End-to-End Bandwidth Measurements in Wireless Networks ................................................................. 74
Andreas Johnsson, Mats Björkman (Mälardalen University), Bob Melander (Ericsson Research)

PPrate: A Passive Capacity Estimation Tool ........................................ 82
Taoufik En-Najjary (Institut Eurecom)

Author Index .............................................................................. 90
