# TABLE OF CONTENTS

Architecture Research and VLSI Implementation for Discrete Wavelet Packet Transform .................................................. 1
Xu Mei-hua, Chen Zhang-jin, Ran Feng, Cheng Yu-lan

Design of an Embedded On-Chip Debug Support Module of a MCU ................................................................. 5
Hu Yue-li, Xiong Bing

An Improved Method of Endpoints Detection Based on Energy-Frequency-Value ......................................................... 9
Chen Guanghua, Liu Junhai, Ye Jun

A Low-Voltage Bandgap Reference with Resistive Subdivision ...................................................................................... 12
Xu Xing, Wang Xichuan, Si Cuiying

Analysis and Application Performance Simulation of Subband Adaptive filtering structures .................................... 16
Chen Guanghua, Ye Jun, Liu Junhai

Curvature-Compensated CMOS Bandgap Reference with 1.8-V Operation ............................................................ 20
Wang Xichuan, Si Cuiying, Xu Xing

Modeling and identification of a sub-mini helicopter ................................................................................................. 24
Liang Liu, Weilong Zheng, Li Chen

System-on-Flexible-Substrates: Electronics for Future Smart-Intelligent World ......................................................... 29
Li-Rong Zheng, Majid B. Nejad, Saul Rodriguez, Liu Zhang, Caiyong Chen, Hannu Tenhunen

Computer Modeling of a Micro-manufactured One-turn Inductor .............................................................................. 37
Hua Lu, David Flynn, Chris Bailey, Marc Desmulliez

Motherboard Heat Transfer Modeling Methodology ...................................................................................................... 43
Kar Mun Ng, Ketan R. Shah

Cooling Challenges and Best Practices for High Density Data and Telecommunication Centers .................................. 49
David Wang, Ph.D.

Design and Development of Thermal-Mechanical Solutions for a Community Personal Computer .......................... 55
David Zhou, Ize Yang Han, Keat Ghee Tan, Boon Howe On

Design of an Architecture for Multiprocessor System-on-Chip (MPSoc) ................................................................. 63
Hu Yue-li, Ding Qian

Checking Causality of Interconnects through Minimum-phase and All-pass Decomposition .................................... 67
Bao Shu Xu, Xing Yun Zeng, Jiangqi He, Dong-ho Han

Nonlinear Behaviors of Transducer Dynamics for Thermosonic Bonding ................................................................. 70
Lei Han, Jue Zhong

Experimental Identification of Parasitic Vibrations on Ultrasonic Bonding Transducer ............................................ 78
Aijun Song, Han Lei, Han-Xiong Li

Studies of Electrical Characteristics of Wire Bonder Transducer by Clamp Condition and On/Off of Bonding Tool ........................................ 82
Guang Ming’an, Han Lei, Li Hanxiang

Effect of bonding parameters on thermosonic flip chip bonding under pressure constraint parameter ................... 87
Fuliang Wang, Junhui Li, Lei Han, Jue Zhong

Laser Soldering System Calibration Based on Computer Vision ..................................................................................... 90
Xinjue Zou, Zhenhua Xiong, Yulin Wang, Han Ding

Research on manufacturing execution system for the SMT industry ......................................................................... 96
Chen Dongfan, Zhou Lincun

Effects of Thermosonic Bonding Parameters on Flip Chip LEDs .............................................................................. 101
Kun Zhoua, Lei Jiab, Ji’an Duanc, Jianhua Zhang

Reliability of fine pitch Sn-3.8Ag-0.7Cu flip chip solder joints with different connection pads ................................... 108
Dezhi Li, Changqing Liu, Paul P. Conway

Homogenization Model Based on Micropolar Theory for the Interconnection Layer in Microsystem Packaging ........ 115
Yan Zhang, Ragnar Larsson, Jing-ya Fan, Zhanmin Cheng, Johan Liu

On the Heat Transfer Enhancement Based on Micro-Scale Air Impinging Jets with Microstructure Heat Sink in Electronics Cooling ........................................................................................................ 120
Jing-ya Fan, Yan Zhang, Johan Liu

Experimental Studies on Bonding Pressure in Wire Bonding ....................................................................................... 125
Rongzhi Gao, Lei Han, Jue Zhong

Effect of Bonding Pressure on Transducer Ultrasonic Propagation in Thermosonic Flip Chip Bonding ....................... 130
Long Zhili, Han Lei, Wu Yunxin, Zhong Jue

Experimental Research on Compulsive Cooling of Jet Impingement ........................................................................ 137
Yifeng Fu, Jiemin Zhou, Ying Yang

Development and Prototyping of a HIB-LED Array Module for Indoor Solid State Lighting ......................................... 141
S. W. Ricky Lee, C. H. Lau, S. P. Chan, K. Y. Ma, M. H. Ng, Y. W. Ng, K. H. Lee, Jeffery C. C. Lo
Lead Free Solder Bump manufacturing with IBM’s C4NP Process .................................................. 292
Eric Laine, Klaus Ruhmer, Eric Perfecto, Hao Longworth, David Hawken
The Microstructure of Eutectic Au-Sn and In-Sn Solders on Au/Ti and Au/Ni Metallizations
during Laser Solder Bonding Process for Optical Fiber Alignment ........................................... 298
Yan Bohan, Wang Chuqing, Zhang Wei
A Novel Structure for CdZnTe Capacitive Frisch Grid Radiation Detector ................................. 304
Qian Yongbiao, Sang Wenbin, Xia Jun, Min jiahua, Teng jianyong, Liang xiaoyan
Failure Analysis of the CdZnTe Detector Electrode Contacts ...................................................... 308
Teng Jianyong, Sang Wenbin, Qin Kaifeng, Min Jiahua, Xia Jun
Simulation design of capacitive Frisch grid CdZnTe detectors ..................................................... 311
Xia Jun, Sang Wenbin, Qian Yongbiao, Min jiahua, Teng jianyong, Liang xiaoyan
Study of assembling ZnO nanowires on AFM tips ................................................................. 315
Hu Siyan, Sang Wenbin, Zhu Zhenghui, Wang Bin, Min Jiahua
Analysis of Mechanical Strength for Flip-chip Bonding of GaAs MMIC ...................................... 319
Bo Zhang, Vignesh Marugesan, Niklas Billström, Patrik Stenquist, Johan Liu

Keynote Speech
Design, Manufacture and Testing of Microengineered Stencils Used for Sub 100 micron Wafer Level Bumping ................................................................. 323
N. J. Gorman, R. W. Kay, I. Roney, M. P. Y. Desmulliez

Keynote Speech
Design and Modeling Challenges for High Density Packaging ..................................................... 324
Chris Bailey
