# TABLE OF CONTENTS

561-102 Optimum ISI-Free DMT Systems with Arbitrary Data Rates and PSK Modulation: When Does Orthonormality Suffice?
Xuejie Song ................................................................. 1

561-805 A Symbol Synchronization Algorithm for PCC OFDM Systems
T. Salim ................................................................. 6

561-047 The New Method for Analyzing Bounds of OOC for OCDMA System Based on Optical Code-Hoop
Li Chuanqi .................................................................. 11

561-178 Development of an AOA Location Method Using Covariance Estimation
Dong-Hyouk Kim .......................................................... 14

561-059 PAPR Reduction in OFDM Systems by Hybrid Algorithm Based on the PTS and APPR Methods
Chusit Pradapbet .......................................................... 19

561-083 A Tibetan Mobile Phone Based on CDMA System
Nyima Trashi ............................................................ 24

561-084 Optimum Detector for HF Radio Links Using Genetic Algorithm
Farid Ghani ............................................................... 29

561-095 An Adaptive Step Size Power Control with Transmit Power Control Command Aided Mobility Estimation
Rachod Patachaianand .................................................. 34

561-129 Performance Analysis of MIMO Adaptive Modulation System Over Fading Channel Model
Phichet Moungnoul ......................................................... 40

561-130 Performance Improvement of MC-FH-CDMA System Using Multi Linear Chirp Technique
Phichet Moungnoul ......................................................... 44

561-151 An Iterative Bit and Power Allocation Scheme for Multi-Cell OFDM Systems
Yung-Fang Chen .......................................................... 49

561-153 Bit and Power Allocation for OFDM Systems in Interference Channels with MVDR Beamforming
Liang-Ying Chen .......................................................... 55

561-162 Joint Estimation and Compensation for Frequency Independent and Frequency Selective IQ Imbalances in OFDM Systems
Injae Hwang ............................................................... 61

561-163 Obtaining Diversity Gain in OFDM Systems Distorted by TX/RX IQ Imbalances
Hyojoong Kim ............................................................ 67
561-177 A Subcarrier, Bit, and Power Allocation Scheme for MIMO OFDM-Based Multiuser Communication Systems .................................................................72
Chun-Ye Lin

561-096 RSVP-TE Extensions to Offer Guarantee of Service to Privileged Flows in MPLS Networks .................................................................77
Javier Rodriguez-Perez

561-105 Systolic Array for String Matching in NIDS .........................................84
Tran Ngoc Thinh

561-116 Intelligence System Approach for Computer Network Security ..................89
Surat Srinoy

561-126 A Hybrid Multi-Application Authentication and Authorization Model Using Multi-Agent System and PKI .............................................96
Somchart Fugkeaw

561-136 An Improved End-to-End Secure Authentication Scheme for CDMA Networks ..................................................................................................102
Mounita Saha

561-157 Dynamic Separated Host Configuration Protocol (DSHCP) ....................108
Atikhom Siri

561-173 Graphical Passwords: Drawing A Secret with Rotation as a New Degree of Freedom ..............................................................114
Saikat Chakrabarti

561-175 Fast End-to-End Encryption for Voice in GSM Networks .........................121
Marko Hassinen

561-808 Coverage Restoration of Wireless Sensor Networks Through the Usage of Decision Trees .................................................................126
Mashael Al-Mutairi

561-155 Interference and Backbone Sensor Network .........................................131
Min Tun

561-023 Towards Dual Fallible Agreement in a Virtual Subnet Network .................137
Shu-Ching Wang

561-042 An Adaptive Physiological Homeostasis Congestion Control ..........................143
Xiumei Fan

561-046 Connectivity Performance for CDMA-Based Wireless Sensor Networks with Variations of Deployment ..........................................................147
Yung-Fa Huang

561-058 The Study of Transmission Performance for Integrated TFRC and ARQ Over WLANS .................................................................153
Chu-Chuan Lee

561-061 Statistical Texture Analysis Methods for Network Traffic Classification .............158
Thorsten Kisner

561-070 Path Selection Strategies for Multipath AD HOC Network .......................164
Supachote Lertvonatham

561-075 A Bit-Serial Word-Parallel Finite Field Multiplier Using Redundant Basis in F2M .................................................................171
Ashkan Hosseinzadeh Namin
561-079 Secure Localization in Wireless Sensor Networks ......................................................... 177
Tanveer Zia

561-085 A Discovery Method for Node-Disjoint Multi-Paths by Valid Source-Destination Edges .................................................................................................................. 181
SeokHo Jung

561-090 A New Hybrid ANT Based Routing Mobile AD HOC Networks .................................. 186
Sunita Prasad

561-137 Throughput Performance of Modified Inhibit Sense Multiple Access Protocol in Packet Satellite System ................................................................. 191
Phichet Moungnoul

561-141 Mobility Mechanism Between MIPv4 and MIPv6 ...................................................... 196
Kuljaree Tantayakul

561-146 Performance Comparison of Probabilistic and Closed Loop Fast Rate Control in Wireless Cellular Data Networks ............................................. 202
 Wiklom Teerapabkajomdet

561-147 A Comparison of M-Commerce and E-Commerce Transport Layer Security Protocols ........................................................................................................ 207
Ntima Mabanza

561-148 Error Rate Performance of MC DS-CDMA System with Multiple Receive Antennas in Nakagami-m Fading Channel ...................................................... 212
Abdel-Awal Hashem

561-156 Adaptive Access Points Selection for 802.11 Wireless Networks ................................ 218
I-Ping Hsieh

561-161 About the Random Walker Merging Problem .......................................................... 223
Hauke Coltzau

561-024 Reaching Reliable Agreement on Wireless Mobile Network ........................................ 227
Kuo-Qin Yan

561-027 Modelling Internet Delay Dynamics: Comparative Study ........................................... 233
H.R. Karampoorian

561-063 Design on Efficient User-Cooperation Scheme with Cyclic Coding Using Leach .............................................................. 239
Ho Van Khuong

561-064 Quality of VOIP Traffic Over Multi-Hop Wireless LAN Networks ................................. 243
Nabil Afifi

561-066 N2R vs. DR Network Infrastructure Evaluation: A Case Study from North Jutland ......................................................................................................................... 248
Lars Jessen Roost

561-068 Performance and Protocol Testing of User Equipment in 3G Networks ................................. 254
Teemu Kanstren

561-078 Performance Analysis of Sigcomp for 3G Cellular Networks ......................................... 260
Woojin Han

561-120 Optimal Contention Windo Assignment for Best Effort Services in IEEE 802.16 Systems ..................................................................................................................... 265
Chien-Chung Chen
561-138 Mobility Based Call Admission Control in Hierarchical Mobile IPv6 Networks .......................................................... 271
   Shun-Fang Yang

561-150 Early Fast Binding Update for Fast Handover in Mobile IPV6 Networks .......................... 277
   Hanh Van Nguyen

561-166 IP Mobility and High-Speed Access Technologies in IPTV Systems .......................... 281
   Nguyen Thi Thanh Tu

561-176 A Policy-Based Conflict Detection Model for Billing Rules .............................................. 286
   Keda Lv

561-806 Evolution of Wireless LAN Security Architecture to IEEE 802.11i (WPA2) .................... 292
   Moffat Matthews

561-807 Extended Policy-Based Management Framework to Provide Always Best Connected Services in Heterogeneous Mobile Environments ................................................... 298
   Mayank Keshariya

561-082 A Scalable Barrel Shifter Topology for All Optical Networks ............................................ 304
   Nabendu Chaki

561-107 Performance Evaluation of the Scale-Net: An Optimal, Irregular Logical Topology for All-Optical Networks ................................................................. 310
   Ritupama Chaki

561-174 Introducing Modified Degree 4 Chordal Rings with Two Chord Lengths .................... 316
   Bozydar Dubalski

561-021 GPS Satellite Visibility Viewed by Vehicles in Bangkok, Thailand ............................... 323
   Prasert Kenpankho

561-127 The Design and Implementation of Hierarchical Evactuation Alarm System ...................... 327
   Kuo-An Hwang

561-171 Study of Rain Effects on 4G Communication Systems in Malaysia ............................... 333
   Lee Hsien Kou

561-809 A PVM Analyzer for Wireshark .................................................................................... 338
   Christian Di Biagio
