Proceedings
Fourth IEEE International Conference on
Software Engineering and Formal Methods

SEFM 2006

Table of Contents

Preface .......................................................................................................................................................... viii
Committees ................................................................................................................................................ ix
Reviewers .................................................................................................................................................. xi

Invited Papers

Modeling Heterogeneous Real-Time Components in BIP ................................................................. 3
Ananda Basu, Marius Bozga, and Joseph Sifakis

The Context of Object Computation ...................................................................................................... 13
Bertrand Meyer

Automatic Property Checking for Software: Past, Present and Future ............................................... 18
Sriram K. Rajamani

Harnessing Disruptive Innovation in Formal Verification ................................................................. 21
John Rushby
Contributed Papers

A Semi-automatic Methodology for Repairing Faulty Web Sites ................................................................. 31
Maria Alpuente, Demis Ballis, Moreno Falaschi, and Daniel Romero

On Bisimilarities Induced by Relations on Actions ...................................................................................... 41
S. Arun-Kumar

Formalizing AspectJ Weaving for Static Pointcuts ..................................................................................... 50
Nadia Belblidia and Mourad Debbabi

Filtering Retrenchments into Refinements .................................................................................................. 60
Richard Banach and John Derrick

Computing Complete Test Graphs for Hierarchical Systems ....................................................................... 70
Deepak D’Souza and Madhu Gopinathan

Jose: Aspects for Design by Contract .......................................................................................................... 80
Yishai A. Feldman, Ohad Barzilay, and Shmuel Tyszberowicz

DISCERN: Towards the Automatic Discovery of Software Contracts ....................................................... 90
Yishai A. Feldman and Leon Gendler

A Model for Temporal Relations between Object Roles ............................................................................. 100
G. Naresh and B. D. Chaudhary

A PVS Based Framework for Validating Compiler Optimizations .............................................................. 108
Aditya Kanade, Amitabha Sanyal, and Uday Khedker

Formal Modelling and Verification of an Asynchronous DLX Pipeline ..................................................... 118
Hemangee K. Kapoor

Product Automata and Process Algebra ....................................................................................................... 128
Kamal Lodaya

Verification of JAVA CARD Applets Behavior with Respect to Transactions and Card Tears .................. 137
Claude Marché and Nicolas Rousset

Specifying Data-Flow Requirements for the Automated Composition of Web Services .......................... 147
Annapaola Marconi, Marco Pistore, and Paolo Traverso

Requirements Modeling—Experience from an Insurance Project ........................................................... 157
G. Murali Krishna

VPA-Based Aspects: Better Support for AOP over Protocols ................................................................. 167
Dong Ha Nguyen and Mario Südholt

A Formal Model of Context-Awareness and Context-Dependency .......................................................... 177
Mats Neovius, Kaisa Sere, Lu Yan, and M. Satpathy

Composing Context Sensitive Analysis ..................................................................................................... 186
Prahladavaradan Sampath and Shrawan Kumar
ASEHA: A Framework for Modelling and Verification of Web Services Protocols

Pemadeep Ramsokul and Arcot Sowmya

A Theory of Singly-Linked Lists and Its Extensible Decision Procedure

Silvio Ranise and Calogero Zarba

Describing and Executing Random Reactive Systems

Pascal Raymond, Erwan Jahier, and Yvan Roux

A Bag-of-Tasks Approach for State Space Exploration Using Computational Grids

Cássio L. Rodrigues, Paulo E. S. Barbosa, Jairson M. Cabral, Jorge C. A. de Figueiredo, and Dalton D. S. Guerrero

A Rigorous Approach to Requirements Validation

Srihari Sukumaran, Ashok Sreenivas, and R. Venkatesh

Declarative Performance Modeling for Component-Based System Using UML Profile for Schedulability, Performance and Time

Yong Zhang, Tao Huang, and Jun Wei

Tutorials

Retrenchment Tutorial

Richard Banach

Integrating Object-Oriented Design and Deductive Verification of Software

Bernhard Beckert, Reiner Hähnle, and Peter H. Schmitt

Static Analysis of Programs: A Heap Centric View

Uday Khedker

Automated Formal Methods with PVS, SAL and Yices

John Rushby

Author Index
