Seventh IEEE International Symposium on a
World of Wireless Mobile and Multimedia Networks — WoWMoM 2006

Message from the General Chairs ........................................................... xv
Message from the TPC Chairs............................................................... xvi
Organizing Committee ........................................................................ xvii
Program Committee ........................................................................... xviii
Reviewers .......................................................................................... xx
Message from the Workshop Chair ...................................................... xxii
Message from the Workshop Organizers-ACC 2006 ............................. xxiii
ACC 2006 Workshop Organization...................................................... xxiv
Message from the Workshop Organizers-EXPONWIRELESS 2006 ....... xxv
EXPONWIRELESS 2006 Workshop Organization ............................... xxvi
Message from the Workshop Organizers-MDC 2006 ........................... xxvii
MDC 2006 Workshop Organization ................................................... xxviii
MDC Reviewers .................................................................................. xxx
Message from the Workshop Organizers-TSPUC 2006 ....................... xxxi
TSPUC 2006 Workshop Organization................................................... xxxii

# Technical Sessions

## Session 1: Sensor Networks I

Multiple-Access Insights from Bounds on Sensor Localization............ 3
Swaroop Venkatesh and R. Michael Buehrer

Zehua Zhou, Xiaojing Xiang, Xin Wang, and Jianping Pan

Entrapping Adversaries for Source Protection in Sensor Networks ......................................................... 23
Yi Ouyang, Zhengyi Le, Guanling Chen, James Ford, and Fillia Makedon

## Session 2A: Next-Generation Wireless LANs

Group-Based Medium Access for Next-Generation Wireless LANs ......................................................... 35
Zakhia Abichar, J. Morris Chang, and Daji Qiao

AISLE: Autonomic Interface SeLEction for Wireless Users ................................................................. 42
Claudio Casetti, Carla-Fabiana Chiasserini, Roberta Fracchia, and Michela Meo

MCMSDA: A Multi-Channel Multi-Sector Directional Antenna Wireless LAN ........................................ 49
Yong Huang, Weibo Gong, and Dev Gupta
Session 2B: Wireless Multicast

Cross-Layer Resource-Consumption Optimization for Mobile Multicast in Wireless Networks
Qinghe Du and Xi Zhang

Evaluating Different One to Many Packet Delivery Schemes for UMTS
Antonios Alexiou, Dimitrios Antonellis, and Christos Bouras

An Efficient Geographic Multicast Protocol for Mobile Ad Hoc Networks
Xiaojing Xiang, Xin Wang, and Zehua Zhou

Session 3: Data Routing and Encoding Strategies

Mobile Element Based Differentiated Message Delivery in Wireless Sensor Networks
Yaoyao Gu, Doruk Bozdağ, and Eylem Ekici

Inter-Regional Messenger Scheduling in Delay Tolerant Mobile Networks
Khaled Harras and Kevin Almeroth

Network Coding for Wireless Mesh Networks: A Case Study
Anwar Al Hamra, Chadi Barakat, and Thierry Turletti

Session 4A: Energy-Efficient Networking

Energy Conservation in Sensor Networks through Selective Nodes Activation
P. Sharma, A. Khan, A. Narasimhan, S. Ramalingam, and Satish K. Tripathi

Energy-Efficient Forwarding Schemes for Wireless Sensor Networks
Marcel Busse, Thomas Haenselmann, and Wolfgang Effelsberg

A Distributed Minimum Energy Multicast Algorithm in MANETs
Song Guo, Victor Leung, and Oliver Yang

Session 4B: Multi-Hop and Mesh Networks

A Flow Control Framework for Improving Throughput and Energy Efficiency in CSMA/CA Based Wireless Multihop Networks
Jaya Shankar Pathmasuntharam, Amitabha Das, and Prasant Mohapatra

Po2V: Network Layer Position Verification in Multi-Hop Wireless Networks
Xiaoxin Wu and Cristina Nita-Rotaru

Adapting AODV for IEEE 802.15.4 Mesh Sensor Networks: Theoretical Discussion and Performance Evaluation in a Real Environment
C. Gomez, P. Salvatella, O. Alonso, and J. Paradells

Session 5: MAC Enhancements

A New MAC Scheme for Very High-Speed WLANs
Tianji Li, Qiang Ni, David Malone, Douglas Leith, Yang Xiao, and Thierry Turletti

Practical Schemes for Smooth MAC Layer Handoff in IEEE 802.11 Wireless Networks
Yong Liao and Lixin Gao
MAC-Layer Scheduling in Cognitive Radio Based Multi-Hop Wireless Networks .................................................................191
Mansi Thoppian, S. Venkatesan, Ravi Prakash, and R. Chandrasekaran

Session 6A: Next-Generation Networks

Middleware Support for Context-Awareness in 4G Systems ..........................................................................................203
Thomas Springer, Kay Kadner, Frank Steuer, and Ming Yin

A Comprehensive and Efficient Handoff Procedure for IPv6 Mobility Support .............................................................212
Christian Vogt

Simulative Analysis of Access Selection Algorithms for Multi-Access Networks ..........................................................219
Denio Mariz, Igor Cananéa, Djamel Sadok, and Gábor Fodor

Minimum Cost Wireless Broadband Overlay Network Planning ..................................................................................228
Peng Lin, Hung Ngo, ChunMing Qiao, Xin Wang, Ting Wang, and DaYou Qian

Session 6B: Sensor Networks II

Pradip De, Yonghe Liu, and Sajal Das

Optimal Transmission Range for Cluster-Based Wireless Sensor Networks with Mixed Communication Modes ............244
Hang Su and Xi Zhang

On-Demand Reliable Medium Access in Sensor Networks ............................................................................................251
Ratnabali Biswas, Vivek Jain, Chittabrata Ghosh, and Dharma Agrawal

Wireless Sensor Networks: To Cluster or Not To Cluster? .........................................................................................258
N. Vlajic and D. Xia

Session 7: Multimedia Traffic and Wireless Scheduling

Rate Scheduling of Multimedia Streams over Parallel Wireless Data Channels with Heterogeneous Reliability .................269
Ki-Dong Lee and Victor Leung

Opportunistic Scheduling of Delay Sensitive Traffic in OFDMA-Based Wireless Networks ..............................................279
Ahmed Khattab and Khaled Elsayed

Selective Channel Feedback Mechanisms for Wireless Multichannel Scheduling ........................................................289
Young-June Choi and Saewoong Bahk

Session 8A: Testbeds and Experimental Results

Management and Diagnosis Architecture for a Large-Scale Public WLAN .................................................................301
Seongkwan Kim, Se-kyu Park, Sunghyun Choi, Jaehwan Lee, and Hanwook Jung

Squeezing 100+ VoIP Calls Out of 802.11b WLANs .................................................................................................308
Sangki Yun, Hyogon Kim, and Inhye Kang

Gauging VoIP Call Quality from 802.11 WLAN Resource Usage ................................................................................315
Miroslaw Narbutt and Mark Davis
Session 8B: Higher-Layer Protocols

A 3D Image-Based Rendering Technique for Mobile Handheld Devices .................................................................325
Azzedine Boukerche, Jing Feng, and Regina Borges de Araujo

Multimedia Correlation Analysis in Unstructured Peer-to-Peer Networks ...............................................................332
Bo Yang, Ali Hurson, Yu Jiao, and Thomas E. Potok

TCP over Rate-Adaptive WLAN - An Analytical Model and its Simulative Verification.........................................................339
Carsten Burmeister, Ulrich Killat, and Jens Bachmann

Session 9: QoS and Performance of Next Generation Cellular Networks

Performance Evaluation of a File Repair Procedure Based on a Combination of MBMS and Unicast Bearers .................................................................349
Thorsten Lohmar, Zhaoyi Peng, and Petri Mähönen

Performance Analysis and Enhancement of the Next Generation Cellular Networks .................................................................358
Xiang Yu, Chunming Qiao, Xin Wang, and Dahai Xu

Cross-Layer Resource-Consumption Optimization for Mobile Multicast in Wireless Networks .................................................................368
Qinghe Du and Xi Zhang

Session 10A: Link Models and Optimization

A New Wireless Channel Fade Duration Model for Exploiting Multi-User Diversity Gain and Its Applications .................................................................377
Chengzhi Li, Hao Che, Sanqi Li, and Dapeng Wu

Fast Downloading of Large Files over Fading Wireless Channels .........................................................................................384
Enzo Baccarelli, Mauro Biagi, Nicola Cordeschi, Cristian Pelizzoni, and Roberto Sabella

Selective Cooperation Based on Link Distance Estimations in Wireless Ad Hoc Networks .................................................................391
Tong Lee Lim, Vineet Srivastava, and Mehul Motani

Session 10B: 802.11 Enhancements

LIHP: A Low Latency Layer-3 Handoff Scheme for 802.11 Wireless Networks .........................................................................................401
John C. Lin and Sampath Rangarajan

A Station-Based Adaptation Algorithm to Improve the Robustness of IEEE 802.11 .........................................................................................410
Jean Cao, Yujing Wu, and Carey Williamson

Resource Control for the EDCA Mechanism in Multi-Rate IEEE 802.11e Networks .........................................................................................419
Vasilios Siris and Cosmas Courcoubetis

Poster Session

Enabling Engineering Document in Mobile Computing Environment .........................................................................................429
Xiaoyong Su, Chi-Cheng Chu, B.S. Prabhu, and Rajit Gadh

Power Control in Multihop CSMA .................................................................................................................................................432
Bo Yan and Hamid Gharavi
Can I Add a Secure VoIP Call? .................................................................................................................................435  
Ariên Nascimento, Alexandre Passito, Edjair Mota, Edson Nascimento, and Leandro Carvalho

HRPD-A Downlink Voice/IP and Data Throughput and Delay Analysis .................................................................438  
Tony Dean, Dennis Schaeffer, Weimin Xiao, and Fan Wang

A Real-Time Smoothing Scheme of MPEG-4 Video for CDMA Systems ...............................................................441  
Jie Qin, Binzhang Liu, Xin Zhang, and Dacheng Yang

An Energy-Efficient DSR Routing Protocol Based on Mobility Prediction..............................................................444  
Yuhong Luo, Jianxin Wang, and SongQiao Chen

A MAC Layer Protocol for Priority-Based Reliable Broadcast in Wireless Ad Hoc Networks ..........................................................447  
Murat Demirbas and Muzammil Hussain

An Efficient Key Revocation Protocol for Wireless Sensor Networks ...........................................................................450  
Gianluca Dini and Ida Savino

Analysis of Contention Based Multi-Channel Wireless MAC for Point-to-Multipoint Networks .............................................................453  
Rajagopal Iyengar, Vicky Sharma, Koushik Kar, and Biplab Sikdar

Engineering of Replica Voting Protocols for Energy-Efficient in Data Delivery ..........................................................456  
Jiang Wu, Kaliappa Ravindran, Ali Sabbir and Kevin A. Kwiat

Preserving Privacy in Wireless Mesh Networks .........................................................................................................459  
Taojun Wu, Yuan Xue, and Yi Cui

An Adaptive Rate Control Algorithm for Real-Time Streaming of 3D Image-Based Rendering over Heterogeneous Wireless Networks ........................................................................................................462  
Azzedine Boukerche and Firas Kasem
ACC-1
SymbioticSphere: A Biologically-Inspired Autonomic Architecture for Self-Adaptive
and Self-Healing Server Farms..........................................................................................................................469
Paskorn Champrasert and Junichi Suzuki

ACC -2
Using Policies to Drive Autonomic Management..................................................................................................475
Raphael Bahati, Michael Bauer, Elvis Vieira, O. K. Baek, and Chang-Won Ahn

ACC -3
A Framework for the Deployment of Self-Managing and Self-Configuring
Components in Autonomic Environments........................................................................................................480
Eleni Patouni and Nancy Alonistioti

ACC -4
Traffic-Adaptive Packet Filtering of Denial of Service Attacks.............................................................................485
Lukas Kencl and Christian Schwarzer

ACC -5
Designing Smart Environments: A Perspective from Autonomic Computing Viewpoint........................................490
S. Das

ACC -6
Evaluating Context Information Predictability for Autonomic Communication....................................................495
Mirco Musolesi and Cecilia Mascolo

ACC -7
Towards the Knowledge-Driven Benchmarking of Autonomic Communications.................................................500
David Lewis, Declan O’Sullivan, and John Keeney

ACC –8
Self-Sizing of Clustered Databases..........................................................................................................................506
Christophe Taton, Sara Bouchenak, Noël De Palma,
Daniel Hagimont, and Sylvain Sicard
Workshop on Advanced Experimental Activities on Wireless Networks

EXPONWIRELESS-01
An Experimental Testbed and Methodology for Characterizing IEEE 802.11 Network Cards.................................................. 513
A. Di Stefano, G. Terrazzino, L. Scalia, I. Tinnirello, G. Bianchi, C. Giaconia

EXPONWIRELESS-02
Measurements from an 802.11b Mobile Ad Hoc Network.......................................................... 519
Vincent Lenders, Jörg Wagner, and Martin May

EXPONWIRELESS-03
802.11b/g Link Level Measurements for an Outdoor Wireless Campus Network.......................... 525
Giuseppe Bianchi, Fabrizio Formisano, and Domenico Giustiniano

EXPONWIRELESS-04
Means and Methods for Collecting and Analyzing QoE Measurements in Wireless Networks........ 531
David Soldani

EXPONWIRELESS-05
Modeling the Roaming in Large-scale Wireless Networks Using Real Measurements ................ 536
Maria Papadopouli, Michael Moudatsos, and Merkourios Karaliopoulos

EXPONWIRELESS-06
Experimental Evaluation of the Source Specific Multicast Model in Mobile Environments........ 542
Tiago Sousa, Paulo Mendes, and Edmundo Monteiro

EXPONWIRELESS-07
Fast Handoff in Mobile Virtual Private Networks........................................................................ 548
Jyh-Cheng Chen, Jui-Chi Liang, Siao-Ting Wang, Shin-Ying Pan, Yin-Shin Chen, and Ying-Yu Chen

EXPONWIRELESS-08
INSIGHT: Internet-Sensor Integration for Habitat Monitoring....................................................... 553
Murat Demirbas, Ken Yian Chow, and Chieh Shyan Wan

EXPONWIRELESS-09
Evaluation of a Stastical Technique to Mitigate Malicious Control Packets in Ad Hoc Networks......................................................... 559
Rajendra V. Boppana and Saman Desilva

EXPONWIRELESS-10
An RSSI-Based Scheme for Sybil Attack Detection in Wireless Sensor Networks........................ 564
Murat Demirbas and Youngwhan Song
Workshop on Mobile Distributed Computing

MDC-1
The Geodesic Broadcast Scheme for Wireless Ad Hoc Networks ............................................................... 571
   Dimitrios Katsaros and Yannis Manolopoulos

MDC -2
Securing Weakly-Dominating Virtual Backbones in Mobile Ad Hoc Networks ........................................... 576
   Giovanni Di Crescenzo, Renwei Ge, Mariusz Fecko, and Gonzalo R. Arce

MDC -4
On The Traffic Behavior of Distributed Wireless Mesh Networks ............................................................... 581
   Brian Braunstein, Troy Trimble, Rajesh Mishra, B. S. Manoj, and Ramesh Rao

MDC –5
Virtual Sensors: Abstracting Data from Physical Sensors ........................................................................ 587
   Sanem Kabadayi, Adam Pridgen, and Christine Julien

MDC -6
P2P Common API for Structured Overlay Networks: A Cross-Layer Extension ........................................ 593
   Franca Delmastro, Marco Conti, and Enrico Gregori

MDC -8
Making Distributed Transactions Resilient to Intermittent Network Connections ....................................... 598
   Nuno Santos and Paulo Ferreira

MDC -9
Tree Slotted Aloha: A New Protocol for Tag Identification in RFID Networks ........................................ 603
   Maurizio A. Bonuccelli, Francesca Lonetti, and Francesca Martelli

MDC -10
A Flexible Middleware for Service Provision over Heterogeneous Pervasive Networks ............................. 609
   Emerson Loureiro, Frederico Bublitz, Nadia Barbosa, Angelo Perkusich, Hyggo Almeida, and Glauber Ferreira

MDC -11
ROVERS: Pervasive Computing Platform for Heterogeneous Sensor-Actuator Networks .......................... 615
   J. Domaszewicz, M. Rój, A. Pruszkowski, M. Golański, and K. Kacperski

MDC -12
GridStix: Supporting Flood Prediction Using Embedded Hardware and Next Generation Grid Middleware ........................................ 621
   Danny Hughes, Phil Greenwood, Geoff Coulson, and Gordon Blair
MDC -13
Building Reliable Mobile Applications with Space-Elastic Adaptation............................................................ 627
Mélanie Bouroche, Barbara Hughes, and Vinny Cahill

MDC -14
SPRINGS: A Scalable Platform for Highly Mobile Agents in Distributed Computing Environments......................................................................................................... 633
Sergio Ilarri, Raquel Trillo, and Eduardo Mena

MDC -15
A Measurement Study of the Mobile Agent JADE Platform ................................................................................. 638
Francesca Lo Piccolo, Giuseppe Bianchi, and Stefano Salsano
Workshop on Trust, Security and Privacy for Ubiquitous Computing
TSPUC 2006

TSPUC-1
Stefano Campadello

TSPUC-2
Strong Ramp Secret Sharing Scheme Using Matrix Projection.................................................................652
Li Bai

TSPUC-3
Towards Blocking Outgoing Malicious Impostor Emails ..............................................................................657
Erhan Kartaltepe and Shouhuai Xu

TSPUC-4
Credentials and Beliefs in Remote Trusted Platforms Attestation................................................................662
Andrea Bottoni, Gianluca Dini, and Evangelos Kranakis

TSPUC-5
PHONEY: Mimicking User Response to Detect Phishing Attacks ...............................................................668
Madhusudhanan Chandrasekaran, Ramkumar Chinchani, and Shambhu Upadhyaya

TSPUC-6
Privacy Preserving Trust Authorization Framework Using XACML .............................................................673
U. M. Mbanaso, G. S. Cooper, D. W. Chadwick, and Seth Proctor

Author Index ...................................................................................................................................................679
