General Conference Director PCIM Europe
Prof. Alfred Rufer, EPFL, Switzerland

Directors Power Electronics
Prof. Leo Lorenz, Infineon Technologies China, China
Dr. Uwe Scheuermann, Semikron Elektronik, Germany

Directors Intelligent Motion
Prof. Helmut Knöll, University of Applied Sciences Würzburg-Schweinfurt, Germany
Prof. Jose Mario Pacas, University Siegen, Germany

Directors Power Quality/Energy Management
Jean-Paul Beaudet, MGE UPS Systems, France
Prof. Johann Walter Kolar, ETH Zürich, Switzerland

This CD is distributed exclusively by

### TABLE OF CONTENTS

#### KEYNOTE PAPERS

**Energy Efficiency through Power Electronics - From State of the Art to the Future**
- Erich Prem, Manfred Schlenk, Peter Zwanzige

**Power Electronics Research and Education in China**
- Dehong Xu

**High Power Electronics, Trends of Technology and Applications**
- Peter K. Steimer

#### SESSION 1

**S1a AUTOMOTIVE**

**Soft-switching Converter Using Current Controlled Non-linear Inductors**
- Michael Stadler

**A New Power Module Concept for Automotive Applications**
- P. Beckedahl

**Cascaded Boost-Buck DC/DC-Converter for Dual-Voltage Automotive Power-Nets with Overlapping Voltage Ranges**
- D. Polenov

**A Phase-Shifted Dual Half-Bridge ZVS Bidirectional DC–DC Converter for Supercapacitor Interface**
- Tomokazu Mishima

**S1b THERMAL MANAGEMENT AND STRESSES**

**Experimental Identification of Failure Risks Due to Thermo-mechanical Stress in Power Electronics**
- Michael Hertl

**Power Cycling of IGBT-Modules with Different Current Waveforms**
- M. Feller

**Sprayed Stress Reducing Interlayers for Highly Reliable Large Solder Joints**
- Frank Osterwald

**Pressure Sintering for Thermal Stack Assembly**
- Ronald Eisele

**S1c DC/DC POWER CONVERSION I**

**Design and Analysis of a Novel HF-Link ZCS-PWM Half-Bridge DC-DC Converter with Asymmetrical Lossless Switched Capacitive Snubber**
- Tomokazu Mishima
A New Soft-Switching PWM High Frequency Half-Bridge Inverter Linked DC-DC Converter with Diode Clamped Active Edge Resonant Snubbers
Khairy Fathy

High Current Low Voltage Solution For Microprocessor Applications from 48V Input
Paul Yeaman

Load Transient Boost Technology(TM) to Improve the Performances of Multiphase Controllers with the Load Frequency Variations
Osvaldo Zambett

S1d MOTORS AND ACTUATORS
A New Consideration in the Design Optimization of Submersible Electric Motors
Shehab Ahmed

Increased Torque Density of Permanent-Magnet Motors Using Concentrated Windings and Intensive Cooling
Csaba Deak

A New Design for Super-Efficient Electric Motors
John Petro

Optimal Design of IPM-PMASR Motors for Wide Constant Power Speed Range Applications
P. Guglielmi

SESSION 2
S2a INNOVATIVE POWER DEVICES
The 6th Generation 1200V Advanced Trench FS-IGBT Chip Technologies Achieving Low Noise and Improved Performance
M. Otsuki

Degrees of Freedom for Optimisation of IGBTs for 400 V AC-line
A. Ciliox

A New High Voltage Diode Technology with Reduced Switching Losses and Improved Softness
H. Hüsken

Requirements and Trade-offs for Modern Low-voltage MOSFETs
Lutz Görgens

High Voltage SPT+ HiPak Modules Rated at 4500V
A. Kopta

S2b RENEWABLE ENERGY SYSTEMS/ENERGY STORAGE
Modeling of a Vanadium Redox Flow Battery
Christian Blanc

A Method to Investigate the Cycling Lifetime of Supercaps
Th. Keutel

Optimal and Predictive Energy Management of Photovaltaic-fuel Cell Hybrid Systems with Short-time Energy Storage
Thilo Bocklisch

Static Synchronous Series Compensation applied to Wind Energy Conversion System
A. Singer
S2c  DC/DC POWER CONVERSION II

Interleaved ZCS Boost DC-DC Converters Using Quasi-Resonant Switch Blocks for PV Interface and Its Performance Evaluations .............................................................. 168
  Khairy Fathy

Design and Optimization of Emulated Peak-current Mode Controlled Buck Regulators ...................................................................................................................... 176
  A. DeNardo

A New Compact Monolithic Step-down Synchronous Regulator Manages High Current ......................................................................................................................... 182
  Fulvio Lissoni

Optimizing Efficiency in Isolated DC-DC Converters .................................................................................................................................. 188
  Juan M. Martinez Sánchez

S2d  PASSIVE COMPONENTS, TECHNOLOGIES

Using Fourier Analysis, to Estimate the Influence of Parasitic Elements of Aluminum Electrolytic Capacitors, in Steady Regime of Switch Mode Power Supplies ........................................................................................................... 194
  Acácio Amaral

Inductance of Coils with Rod Cores as a Function of Core Geometry and Winding Layout .................................................................................................................. 200
  Matthias Spang

Optimisation of Contactless Inductive Transmission Systems for High Power Applications .................................................................................................................. 206
  Daniel Kürschner

Media Motion and Its Application by a Polyphase AC Motor Without a Rotor ................................................................................................................................. 212
  Osamu Sugiura

POSTER / DIALOG SESSION PP 1 – PP 99

Switching Times of Stressed MOSFETs at High Temperatures ................................................................................................................................. 218
  C. Salame

1200V IGBT4 Low and Medium Power - Chips designed to the Needs of the Application ........................................................................................................... 224
  M. Bäßler

A new Approach of Single-Inline High Power Density Molded Module for drives applications ................................................................................................. 228
  W. Frank

Off-line SMPS High Power IC Converter - A Novel Hybrid Approach for Next-generation, Energy Saving, Low-cost Devices .................................................................. 234
  Lorenzo M. Selgi

Low Profile Power Module Combined with State of the Art MOSFET Switches and SiC Diodes Allows High Frequency and Very Compact Three-phase Sinusoidal Input Rectifiers ........................................................................................................... 240
  Serge Bontemps

I²f: Making Power Supplies Easier to Design and Manufacture ............................................................................................................................. 246
  Donald Ashley

Universal Chipset for IGBT and Power-MOSFET Gate Drivers ................................................................................................................................. 251
  Jan Thalheim
Power Cycling Lifetime of Power Modules at High Junction Temperature Swings .................. 257
M. Ikonen

Utilizing Press-fit for Solderless Assembly of Pin Grid Connected Power Modules .......... 262
M. Thoben

Simulation of Self-oscillating Control System for Series Resonant Inverters Using
Spice ................................................................................................................................................. 268
Georgi Kunov

Implementation of a Pulse Generator for the Investigation of Dead-Time effects in
Half-Bridges by a DSP system ......................................................................................................... 274
Markus Schmid

Design and Realization of a Multi-Cell-Switch-Mode Power Amplifier Employing a
Digital Poly-Phase-Pulse-Width-Modulator .................................................................................. 280
Michael Hartmann

Investigation on a DSP-system to Digitally Control a Switch-mode Power Supply .......... 286
Markus Schmid

New Devices for Power Factor Correction Applications .......................................................... 292
Francisco J. Azcondo

Design Optimization for LCD TV Power Supply with Resonant Technique ..................... 298
S.-A. Liang

Basic Three Phase Electronic Energy Meter Power Supply for Solar Plants
Applications ......................................................................................................................................... 304
Matej Martinjak

Methods for the Analysis of the Parallel Resonant Converter with Capacitive
Output Filter ........................................................................................................................................ 308
M. Schmid

Optimizing Power Density using Laminated Busbars ............................................................. 314
Michael Stibgen

Mass Spectrometer and Its High Voltage Power Supply Generator .................................. 318
Aurika Janulyte

Design of a Line Voltage Booster in a New Supply System for 1.5 kV Catenaries ............ 323
G. Postiglione

Mosolver(TM) - A combined Motor and Resolver ................................................................. 329
Donald Labriola II

The Control Problems of the Switched Reluctance Motor .................................................. 335
Jiri Fort

Non Intrusive and Continuous Monitoring of Standby Batteries ...................................... 341
N. D. Scott

Permanent Magnet Claw-pole Synchronous Generators Behavior in Wind
Conversion ........................................................................................................................................... 347
Nicolae-Florin Jurca

Modular Communication Concepts for PV Inverter ............................................................... 352
Jochen Mielke
SESSION 3

S3a HIGH POWER MODULES
Rapid Solutions for Application Specific IGBT Module Design .......................................................... 358
D. R. Newcombe

The New Concept IGBT-PIM with the 6th Generation V-IGBT Chip Technology ...................................... 365
Y. Kobayashi

A New Non-isolated Power Module Concept .......................................................................................... 371
Thomas Grasshoff

Investigations of High Temperature IGBT Module Package Structure ..................................................... 376
M. Horio

S3b CONTROL IN POWER ELECTRONICS
The Impact of Open-loop OP-AMP Dynamic Response on the Design of High-frequency DC-DC
Switching Regulators .................................................................................................................................. 382
A. DeNardo

Gate Driving of a 3.3 KV IGBT Chopper by an 8 Bits Encoded Wireless Transmission ........................................ 388
Stéphane Bréhaut

Minimum Configuration Design for Digital Control of Power Converters ................................................. 394
C. W. Fung

High Performance IGBT-driver in Microtransformer Technology Providing Outstanding Insulation Capability ......................................................................................................................... 400
Bernhard Strzalkowski

Digital Control Maximizes Performance for Multi-Rail, Multi-Output DC/DC Systems ................................... 406
Olivier Monnier

S3c UNITY POWER FACTOR AND HARMONICS
Harmonic Analyses and Mitigation at a Large Industrial Steel Plant - A Case Study ........................................ 410
Johan Enslin

A Systematic Approach to Frequency Compensation of the Voltage Loop in Boost PFC Pre-regulators ......... 418
Claudio Adragna

Negative Influence of Controlled Rectifiers on Power Distribution Network ............................................. 424
Pavel Drabek

VOLUME 2

Harmonic and Interharmonic Currents Generated by Softstarts ............................................................. 428
Václav Kus

S3d DRIVE TECHNOLOGIES
Online Parameter Tuning of Stator Resistance and Stator Inductance in Sensorless Controlled PMSM-Machines at Low Speed ......................................................................................................................... 432
Manfred Schröd

Measures to Improve the Torque Accuracy of Permanently Excited Synchronous Motors .................................. 438
Guido Stoeppler
Comparison of Field Oriented Control and Indirect Flux Control Applied to
Segmented Long Stator Linear Machine.............................................................. 444
Rodrigo Benavides

A Robust Control Scheme for Induction Motor Drives for Applications in the
Field-Weakening Speed Range........................................................................... 450
Domenico Casadei

SESSION 4

S4a  LOW POWER PACKAGES

Solid State Intelligent AC Switch........................................................................ 456
Ghafour Benabdellaziz

Power Integration Module for Personal Computers............................................ 462
Alan Elbanhawy

A New SOI Single Chip Inverter IC Implemented Into a Newly Designed SMD
Package................................................................................................................ 465
Kiyoto Watabe

Numerical and Experimental Study on Surge Current Limitations........................ 470
Thomas Hunger

S4b  THERMAL CHARACTERIZATION

Modelling the Thermal Coupling between Internal Power Semiconductor Dies of a
Water-Cooled 3300V/1200A HiPak IGBT Module............................................. 476
Uwe Drofenik

Measurement Techniques for the Thermal Characterization of Power Modules........ 484
Thies Wernicke

Thermal Shielding Techniques for Power Electronic Devices in High Temperature
Applications.......................................................................................................... 490
Markus Billmann

Real-time Prediction of the Steady State Temperature of Circuit............................ 495
Frank Bertling

S4c  ACTIVE FILTERS

Modification of a Commercial Frequency Converter to an Active Power Filter in
690 V Power System.......................................................................................... 501
Perttu Parkatti

Thyristor Switched Reactor - Active Power Filter Combination for Power Quality
Solution of a Light Rail Transportation System................................................. 507
Alper Terciyani

Application of a Simplified Control Scheme for the Generalised Instantaneous
Reactive Power Theory in Active Power Filters for Decentralised Energy
Generation........................................................................................................... 513
Igor Merfert

A Digital Time-Domain Method for Instantaneous Harmonics Extraction in Active
Power Line Conditioning.................................................................................... 519
J. Ahmadian
S4d  EMBEDDED MOTION

Optimisation of Servo Control for Highly Dynamic Axes for Ultra Precision Freeform Machining............................................................... 525
Christian Brecher

Sensorless Controlled External Rotor PMSM for Light Vehicles................................................. 531
Eilenberger Andreas

FPGA Based Sine-cosine Encoder Feedback Processing for Servo Drive Applications.......................................................... 537
Jens Onno Krah

PAD - Piezoelectric Actuator Drive, New High Precision and Sensitive Actuator System ......................................................... 543
R. Keller

POSTER / DIALOG SESSION PP 30 – PP 56

A Secondary Side Post Regulator PWM Scheme Utilizing Valley Current Mode Control in Conjunction with Leading Edge Modulation ....................................................... 548
Sameh Sarhan

Innovative Power Device to Support Intermediate Bus Architecture Designs ......................... 554
Jeffrey A. Ham

Soft-Switching Inverter Using Pulse Density Modulated High Frequency Technique for Induction-Heated Drum Rotor Working Coil Stator .................................................. 558
Farag K. Abo-elusr

Using Trench-Gate IGBTs in New Boost-active Clamp One-Stage Soft Switching PWM High Frequency Inverter ............................................................... 564
Farag K. Abo-elusr

Low Voltage DC-to-DC Converter for Solar Applications .......................................................... 570
K. H. Edelmoser

The Analysis and Simulation of Power Circuits for a High Voltage Converter .......................... 575
V.Y. Shergin

SEPIC Converter and ESBT(R) Devices Used to Implement a PFC Stage for Very High Voltage Input Lighting Applications .......................................................... 581
Giovanni Vitale

Hugo Marques

Evaluation of Power LEDs and Their Efficiency by Driving Them with Currents Typical to Switch-mode Power Supplies .......................................................... 592
Markus Schmid

Computer Analysis of Fault Tolerant H-Bridge Multilevel DC/DC Converters ........................ 598
Volker Pickert

High Performance, HB-LLC Resonant Adapter with PFC for Laptop Computers ....................... 604
Claudio Spini

Automotive Switching DC to DC Regulator Concepts with High Efficiency Sleep Mode .......................................................... 610
Frederik Dostal

Optimised Induction Motor Drive for Automotive Applications .................................................. 613
Dušan Graovac
Interpolation of Discrete Data Sets by Neural Networks ........................................... 618
M. Bayer

The Optimum Design Technology for Turn-off Oscillation Avoidance ...................... 624
Shuichi Kitamura

A Low QGD and Low Specific On-resistance Power Trench(TM) MOSFET for Power Supply Applications ................................................................. 630
Sampat Shekhawat

How the Carriers’ Mobility in the Transistor Channel and Its Thermal Gradient Affects the Power MOSFET Thermal Coefficient (TC) During the Linear Zone Operation Mode: Theoretical Study, Measurements and Simulation ........................................ 635
Giuseppe Consentino

A New Offline Method for Stator Inductance Detection for Use in Induction Motor Controllers ................................................................................................... 641
Ertan Murat

Nonlinear Stator Oriented Control of Induction Motor with Power Measurement ........... 646
Haithem Abu-Rub

A Versatile Low-Cost Integrated Circuit Transducer for Isolated Current Measurements ............................................................................................................. 652
David Jobling

Detection of Rolling Bearing Faults by Frequency Response Analysis ......................... 658
Sebastian Villwock

Optimal Design of Fuel Cell-Battery Hybrid Power Supplies for Mobile Transport Platform Applications ......................................................................................... 664
Wolf-Jürgen Trompke

Practical Evaluation of Simple 12-Pulse Three-Phase-Bridge Diode Rectifier of Capacitor-Input-Type ....................................................................................... 670
Yasuyuki Nishida

Neural Network Based Soft Switching Control of AC-AC Converter for Voltage Harmonics and EMI Reduction .............................................................................. 676
Kayhan Gulez

Investigation of Transformer Failure Factors and Mitigation Technique ...................... 682
Ismail Daut

SESSION 5

S5a DC/AC POWER CONVERSION

Variable DC-Link Voltage Source Inverter for Reactive Power Compensation in Single Phase 25kV AC Railway Systems ......................................................... 689
Christoph Haederli

Space Vector Modulation for 3 Phase 3 Level Neutral Leg PV-inverter ......................... 695
Salem Fouzey

Implementation of Space Vector Modulation for Two-Stage Direct Power Converter feeding a Speed Controlled Induction Motor ........................................ 701
Oleksandr Tyshakin

A New Carrier-based PWM for the Reduction of Common Mode Currents Applied to Neutral Point Clamped Inverters .......................................................... 707
Arnaud Videt

S5b ENERGY SAVING AND IMPROVED ENERGY
EFFICIENCY VIA POWER ELECTRONICS

Impact of Motor Drives on Energy Efficiency ................................................................. 713
Peter Barbosa

Energy Efficiency in Lighting: Concepts, Potentials and Challenges ............................. 719
Dietmar Klien

System Advantages and Semiconductor Requirements of 3-stage DC/DC-
converters for Server Switch Mode Power Supply (SMPS) Applications ...................... 724
Ulf Schwalbe

S5c POWER QUALITY SOLUTIONS

Load Sharing and Stability Analysis of Iso-Parallel UPS Systems .................................. 730
Ralf Briest

Result of Field Survey on User Needs for Multiple Power Quality Distribution .............. 736
Yukio Ishigaki

Contribution of Power Electronic Devices in the Grid Integration of Disturbance
Loads .................................................................................................................................. 742
X. Mamo

Power Calculations Based on New Definitions for Measured Data of Arc Furnace
and Transformer Inrush Current ....................................................................................... 748
Arash Kiyoumarsi

S5d SOFTWARE TOOLS AND APPLICATIONS

An Optimization based Control Design for Electric Drive Systems ................................. 754
Lutz Zacharias

Monte-carlo Simulation of Paralleled IGBT Modules - from Worst Case
Simulations to a Full Statistical Approach ........................................................................ 760
C. Messelke

Rapid Simulation of Permanent Magnet Drives ................................................................. 766
Praveen Kumar

FlowSIM - New Innovative Electrical and Thermal Simulation Method for Power
Modules in Inverter Applications ....................................................................................... 772
Temesi Erno

SESSION 6

S6a SPECIAL CONVERTERS

Power Converters for the Magnets of the New Elettra Booster Synchrotron .................... 778
Roberto Visintini

High Voltage Pulse Generator with Switching at 2.5 kV ................................................ 783
Victor Reyes

35 kW Active Rectifier with Integrated Power Modules ..................................................... 789
Peter Wiedemuth

S6b METERING AND DIAGNOSTICS

Smart Algorithms for Reliable Power Quality Measurements ......................................... 795
Martin Hannink
Technology of Distance Measurement and Monitoring for Power Conversion and Intelligent motion ................................................................. 800
  P. Bauer

Prediction and Measurement of Common Mode EMI Influence on High Side Current Measurements ................................................................. 806
  Matthias Spang

S6c  SENSORS

A Transducer at the Limits of Current Measurement Accuracy ................................. 812
  Claude Gudel

Closed-loop Current Sensing Systems with Magnetic Field Probe Incorporating a New Sensor Signal Conditioning IC ........................................... 817
  Klaus Reichert

High Speed Low Noise Current Sensing ................................................................. 822
  John Cummings

Calibration of Rogowski Transducers with Non-inverting OP-AMP Integrators .......... 828
  W. F. Ray

S6d  DRIVES FOR SPECIAL APPLICATIONS

A PWM Scheme for Five-Leg VSI Supplying Two Three-Phase Induction Motors with a Common Inverter Leg .................................................. 834
  Dražen Dujic

Multiscalar Control of Induction Motor Supplied by Current Source Inverter .......... 840
  Marcin Glab

Motor Parameter-Independent Sine Wave Drive Technology for PMSM using AC220V Single Chip Inverter IC and 8-bit Microcomputer ....................... 846
  Kenji Sakurai

FPGA-based Controller Applied to a DC Starter-generator Dedicated to an Helicopter Isolated Grid ................................................................. 852
  N. Patin
