Proceedings of the Symposium on Air Quality Measurement Methods and Technology CP-165-CD

Publication Policy
This compact disk contains technical papers presented at the Symposium on Air Quality Measurement Methods and Technology, held April 30 - May 3, 2007, in San Francisco, CA. The information and opinions expressed in these papers are solely of the authors and should not be considered as having the endorsement or support of the Association.

Compilation Copyright ©2007 by the Air & Waste Management Association. Copyright of the individual papers are retained by the authors. Published in June 2007.

Manufactured in the United States of America

Additional copies of these and other A&WMA conference proceedings are available through the A&WMA Online Library. To place an order, please visit the Online Library at http://secure.awma.org/OnlineLibrary/ or contact the A&WMA Publications Order Department at onlinelibrary@awma.org, +1-412-232-3444 (phone) or +1-412-232-3450 (fax).

For a complete listing of books, CDs, and educational materials offered in the Online Library, visit our Web Site, or contact the Publication Department at onlinelibrary@awma.org, +1-412-232-3444 (phone) or +1-412-232-3450 (fax).
### TABLE OF CONTENTS

**SESSION 1: Advances In The Measurement And Data Analysis Of Ambient Particulate Matter Carbon**

ACHEX plus 1/3 Century: How Have We Done, What Do We Do Next? .......................... N/A  
Thomas Cahill, University of California, Davis

Effects of Quartz Filter Type on Sampling and Organic Carbon/Elemental Carbon Analysis of PM$_{2.5}$ ............................................................... 1  
M. Peterson, RTI International

Long-Term Continuous Observation of the Carbon Component Concentration in the Atmospheric Aerosol Particles in Osaka, Japan ............................................. 10  
A. Mizohata, Osaka Prefecture University

Effects of an Organic Denuder onSampling and Organic Carbon/Elemental Carbon Analysis of PM$_{2.5}$ Collected on Pall Tissue Quartz and Whatman QMA Quartz Filters ................................................................. 14  
M. Peterson, RTI International

Methodologies to Compensate for Optical Saturation and Scattering in AethalometerTM Black Carbon Measurements .............................................. 20  
J. Turner, Washington University

Volutility of Organic Material from Quartz Filter: Research Methods and Preliminary Results ..................................................................................... 25  
C. Phuah, University of California, Davis

PM$_{2.5}$ Carbon Measurements in New York: Comparison of Techniques and Seasonal, Weekday, and Diurnal Patterns ................................................. 30  
O. Rattigan, New York State Department of Environmental Conservation

Multi-Site Determination of Elemental, Organic, and Total Carbon Concentrations for PM$_{2.5}$, PM$_{10-2.5}$, and PM$_{10}$ ...................................................... 36  
B. Grover, U.S. EPA

Semi-Continuous Carbon Measurements in the SEARCH Network ................................ N/A  
E. Edgerton, ARA, Inc.

**SESSION 2: Ambient Air Monitoring-Methods And Results**

Development of Samplers for Passive Measurement of Atmospheric Mercury Speciation and Dry Deposition ................................................................. 41  
S. Lyman, University of Nevada, Reno

Remote Ambient Ozone Measurements using Low Power Continuous Analyzers ........ 45  
J. Faust, Air Resource Specialists, Inc.

Preliminary Results from Cherokee Nation’s VOC Monitoring Project Near Pryor, Oklahoma ................................................................. 50  
K. Curtis, Cherokee Nation Environmental Programs
SESSION 3: INDOOR AIR AND ODOR
Integration of Testing and Modeling to Characterize Contaminant Transport within Buildings ................................................................. 86
G. Fenton, Battelle

Indoor Air Quality Measurements in Commercial Kitchens .................................................. 91
R. Patil, Indian Institute of Technology

Methods for Sampling on Odours ........................................................................ 95
A. Bokowa, ORTECH Environmental Inc.

Detection of High Risk and Odorous Volatile Organic Compounds with an Ultra-Fast Gas Chromatograph ................................................. 96
M. Marando, GEI Consultants, Inc.

Measuring Air Exchange Rates Using Continuous CO2 Sensors ........................................ 101
Z. Bai, College of Environmental Sciences and Engineering, Nankai University

A Cross-Sectional Study of Schools for Code Compliance to Ventilation Rate Requirements ........................................................................ 109
R. Morse, Morse Zehnter Associates

Novel Approaches for Material Emissions Testing .............................................................. 117
J. Dwan, Markes International

SESSION 4: NEW RESULTS FROM THE SUPERSITE PROGRAM
New York City Intensive Field Campaign: Summer/Winter Contrasts .................................. 127
J. Schwab, Atmospheric Sciences Research Center, University at Albany

Supersite Update - 1 ........................................................................ N/A
J. Watson, Desert Research Institute

Supersite Update -2 ........................................................................ N/A
J. Watson, Desert Research Institute

Using Observational Data to Build a Conceptual Model for Ambient Fine Particulate Matter over St. Louis ............................................. N/A
J. Turner, Washington University

SESSION 5: DEVELOPMENTS IN PM$_{2.5}$ CHEMICAL SPECIATION
EPA Urban Speciation and Trends Network Modifies Carbon Sampling .......................... 136
M. Tigges, Air Resource Specialists, Inc.
Getting the Pb Out-Research to Reduce Childhood Lead Poisoning .................................................. 141
W. Gutknecht, RTI International

A Comparison of XRF and Microwave Assisted Digestion – ICP-MS Analysis for Determining Trace Elements in Ambient Particles and its Implications in Source Receptor Modeling ................................................................. 142
S. Chellam, University of Houston

Recent 2006 Experimental Comparison of Several PM$_{2.5}$ Speciation Laboratories .......................... 147
J. Smiley, U.S. EPA, National Air and Radiation Environmental Laboratory

Chemical Speciation of Particulate Matter in the Central Valley ...................................................... N/A
P. Kelly, University of California, Davis

Developments in PM$_{2.5}$ Chemical Speciation ................................................................. 152
R. Tropp, Desert Research Institute

SESSION 6: CENTRAL CALIFORNIA AIR QUALITY STUDIES

History and Design of Central California Air Quality Studies ................................................. N/A
J. Watson, Desert Research Institute

Understanding the Relationship between Meteorology and Ozone in Central California ................................................................. 163
A. Palazoglu, University of California, Davis

Ozone, Precursor, and Meteorology Measurements in Central California and the Development of a Conceptual Model for Ozone Formation ........................................................................... 169
P. Martien, Bay Area Air Quality Management District

The Use of Ambient Air Quality Measurements in Photochemical Modeling of Ozone in Central California ................................................................................................. 174
J. DaMassa, California Air Resources Board

Particulate Matter Measurements in Central California ........................................................................ 179
J. Chow, Desert Research Institute

Development of a Conceptual Model for Particulate Matter Formation ........................................ N/A
K. Magliano, K. Fahey, California Air Resources Board

Modeling of Particulate Matter in Central California ........................................................................ 184
M. Kleeman, University of California

Regulatory Relevance of Central California Air Quality Studies .................................................. 188
J. Sweet, San Joaquin Valley Unified APCD

SESSION 7: AIR QUALITY DATA ANALYSIS - TECHNIQUES AND ADVANCES

Hourly Reconstructed PM$_{2.5}$ Mass: Is Compositional Variability Real? ........................................ 194
R. Tanner, Environmental Technologies, Tennessee Valley Authority

Trends in Ambient Air Toxics Concentrations .................................................................................. 199
H. Hafner, Sonoma Technology, Inc.

An Evaluation of Air Toxic Concentrations and Emissions for the San Juan, Puerto Rico MSA ................................................................. 202
R. Oommen, Eastern Research Group, Inc.

Combined Air Toxics and PM$_{2.5}$ Component Source Apportionment for Baltimore .................. 215
K. Wade, Sonoma Technology, Inc.
Interagency Monitoring of Protected Visual Environments (IMPROVE) Detection Limits .......................................................... 220  
N. Hyslop, Crocker Nuclear Laboratory, University of California

Analysis of Ambient Air Quality after Hurricane Katrina ....................................................... 226  
M. McCarthy, Sonoma Technology, Inc.

SESSION 8: LOW LEVEL MEASUREMENT OF VOCS - VAPOR INTRUSION, INDOOR AIR, AND OTHER APPLICATIONS

Water Management Techniques for Air Samples Collected on Thermal Desorption Tubes... 229  
M. Collins, Chromatography Applications and Technology Group, PerkinElmer LAS

The Application of Method TO-15 to Naphthalene Measurements in Indoor Air............... 234  
H. Hayes, Air Toxics Ltd.

Comparison of Tedlar Bag and Bottle-Vac Sampling and Analysis for VOCs in a Soil Gas Investigation Conducted by the Michigan Department of Environmental Quality ........ N/A  
T. Robinson, Ace Laboratories, Inc.

Helium Diffusion Sampling into Glass Canisters for Low Cost Collection of Ambient Air over 1 to 30 Days ................................................................. N/A  
D. Cardin, Entech Instruments Inc.

Using EPA TO-15 SIM for Volatile Organic Compound Analysis for Vapor Intrusion.................................................................................. 240  
S. Hoyt, Environmental Analytical Services, Inc.

Stability of Ultra Low Level VOCs under Real-world Conditions ........................................ N/A  
A. Fortune, Columbia Analytical

Forensic Analysis of Vapor Intrusion Samples for Hydrocarbons ...................................... 241  
S. Hoyt, Environmental Analytical Services, Inc.

SESSION 9: SOURCE EMISSIONS - POINT AND AREA

Characterizing Fugitive Emissions using Digital Camera Technology ......................... N/A  
P. Grieco, EM Assist Inc.

Validation of Volatile Fatty Acid Recovery from the USEPA Surface Emission Isolation Flux Chamber Technology and USEPA Method TO-17 .......... 242  
C. Schmidt, Consultant

Condensable Particulate and Method 202 Modifications Update .................................. 251  
R. Bower, Eastern Research Group

Method to Rank Detectability of Compounds and Process Streams Using an Infrared Optical Imaging Device .................................................... N/A  
Y. Zeng, Providence Engineering and Environmental Group, LLC

Application of the Miran Saffire for Monitoring Source VOCs ........................................ N/A  
J. Winberry, EnviroTech Solutions

Profile Comparison of Coal Combustion Fly Ash Between Two Different Sampling Methods ................................................................. 257  
Z. Bai, College of Environmental Sciences and Engineering, Nankai University

Development of a New Method for Sampling and Analysis of Amines ............................. 267  
S. Parmar, Atmospheric Analysis and Consulting, Inc.
SESSION 10: METHODS DEVELOPMENT AND EVALUATION

Performance Auditing of a Human Air Pollution Exposure System for Coarse Particulate Matter (PM$_{2.5}$-10)........................................................................................................... 277
  M. Ray, U.S. EPA/NHEERL

Continuous Measurements of Nitric Acid and Ammonia at a Rural New York Site........... 282
  J. Schwab, Atmospheric Sciences Research Center, University at Albany

Pneumatic Focusing Gas Chromatography (PFGC) Principles, Practices and Data Analysis ........................................................................................................................................... 288
  R. O’Brien, VOC Technologies and Portland State University

East St. Louis Field Performance Evaluation of the Thermo Electron Model 5030 SHARP PM$_{2.5}$ Mass Monitor ............................................................................................................ 289
  J. Turner, Washington University

A Field-Deployable, High Accuracy Atmospheric Multi-Gas Monitor Based on Cavity Ring-Down Spectroscopy ................................................................. 294
  E. Crosson, Picarro, Inc.

Comparison of Semi-Continuous Measurement of PM$_{2.5}$ Mass and Anions by Several Samplers ............................................................................................................ 299
  D. Eatough, Department of Chemistry and Biochemistry, Brigham Young University

Comparison of Carbon and Oxygen Measured by Rutherford Back Scattering to Carbon and Implied Oxygen in IMPROVE Samples ...................................................... 304
  L. Ashbaugh, Crocker Nuclear Lab, University of California

SESSION 11: SUMMA CANISTER SAMPLING - APPROACHES FOR AMBIENT AIR AND VAPOR INTRUSION

History and Application of the SUMMA Canister for Low Level VOC Measurements ......................................................................................................................... N/A
  R. Rasmussen, Oregon Graduate Institute

Advantages of Non-Pressurized Canister Sampling for TO-15 Ambient Air Monitoring ......................................................................................................................... N/A
  D. Cardin, Entech Instruments Inc.

Application of the Xontech 910 Ambient Air Sampler to Low Level Vapor Intrusion and Indoor Air Measurement ............................................................................................................. N/A
  S. Hoyt, Environmental Analytical Services, Inc.

Practical and Theoretical Aspects Flow Controllers in Canister Sampling ................................................................. N/A
  E. Winegar, Applied Measurement Science

Stability of Selected Hazardous Air Pollutants (HAP’s) in Canisters ............................................................................................................. N/A
  S. Hoyt, Environmental Analytical Services, Inc.

Sampling and Analysis of Formaldehyde and Other TO-11 Carbonyls Using Glass Canisters ............................................................................................................................. N/A
  D. Cardin, Entech Instruments, Inc.
