“Modern Production Trends for Tubes & Pipes: Welded Seamless & Non-Ferrous”

September 24-26, 2007
Dnepropetrovsk, Ukraine

Printed from e-media with permission by:
Curran Associates, Inc.
57 Morehouse Lane
Red Hook, NY 12571

Some format issues inherent in the e-media version may also appear in this print version.
**TABLE OF CONTENTS**

“Modern Technology of Long Length Precision Seamless Tube Production from Corrosion-Resistant Steels and Alloys” ..............................................................1  
V. Frolov

Y. Gouliev

A. Safjanov

“New Solutions for Simulations of Tube Hot & Cold Rolling” ...........................................25  
A. Vydrin

“Modern Ways of Reconstruction of Shops for Oil and Gas Pipeline Production” .............35  
Y. Bannyy

“Manufacturing Technology of Medium Size Seamless Pipe” ........................................41  
S. Kenichi

“Advanced Extrusion Technology for Stainless Steel Tubes” ....................................51  
H. Pelster

“Stainless Steel Tube Bright Annealing Furnace with Hydrogen Atmosphere at the Continuous Finishing Line of NSTM CJSC Cold Tube Rolling Shop” .........................59  
M. Kutsenko

“Universal Steel Seamless Drill Tubes are a Breakthrough Technology in Exploration Well Drilling” .................................................................69  
A. Kozhevnikov

“FQM™: Danieli 3-Roll Pass Retained Mandrel Mill for high quality Seamless Tube Production.” ..................................................................................79  
G. Kulessa

“Reliable Superheater Tubes for Modern Heat and Power Engineering” .........................85  
T. Senina

“TUMICON – Mill Management and Control Tool for Advanced Stretch Reducing Mills” ..................................................................................91  
S. Willems
“Detecting Oblique Defects in Tubes by Rotary Ultrasonic Testers” .................................................. 99
J. Venczel

“A Study of Operating Conditions of Long Mandrels and the Development of Measures to Improve Wear Resistance” .................................................................................................................. 105
T. Karmazina

“New Strategies for the Wall Thickness Measurement in the Hot Seamless Tube Production Plant” ............................................................................................................. 111
H. Gurski-Schramm

“Taking into Account Plasticity and Initial Billet Dimensions to Improve Tube Quality” .............................................................. 119
R. Golubchik

“The Device for Making Artificial Defects in the Form of Marks (Grooves) in Tube Walls by Method of Cutting” .................................................................................. 129
V. Maksimenko

“The Piercing Mill Tool Design” .................................................................................................................. 133
D. Merkulov

“Cold Continuous Pilger Rolling of Extra Thin Wall and Multilayer Tubes” ............................................. 145
V. Grigorenko

“Cold Rolled Tubes with Inside and Outside Longitudinal Ribs” .............................................................. 151
Y. Frolov

“Seamless Pipe Quality Improvement by Means of Stretch-Reducing Mill Modernisation with Installation of Hot Gauging System and Real-Time Deformation Process Control” .......................................................... 159
V. Lozovoy

“Efficient Finishing Systems for Hot Rolled Tubes” .................................................................................. 163
H-J Braun

“Modular Approach to the Analysis and Creation of Equipment for Cold Pilger Tube Rolling” .............................................................. 169
V. Vyshinsky

“Improvement of Technology and Expansion of the Product Size Range at Dnepropetrovsk Tube Works JSC Tube Rolling Unit ‘140’” ........................................................................... 175
G. Khavkin

“The Dynamics of the Bar System of the Mandrel Retaining Mechanism of the Tube Rolling Plant Piercing Mills” .......................................................................................... 179
S. Rakhmanov

“Finite Element Modeling of Pull Effect on the Wall Thickness Non-uniformity in the Tube Reducing Process” ..................................................................................................... 185
A. Milenin

“Improvement of Wear Resistance of Mandrels of Rolling Plant Piercing Mill” .............................................. 191
F. Gamidov
“Mastering of Piercing Mill Worn Mandrels Recovery Technology by Method of Hot Stamping” ................................................................. 201
V. Brodsky

“Induction Heating Applying Optivar Converter for: Billet Production; Seamless Tube Production; Treatments” ........................................... 207
A. Picco

“Mastering the Technology of Round Tube Billet Casting at MMW ISTIL (Ukraine) CJSC” ................................................................. 215
G. Kasyan

“Manufacturing Artificial Flaws Using Electric Discharge Machining” ...................................................... 221
D. Steely

“High Precision Straightening of Seamless Stainless Steel Tubes” ....................................................... 229
H-J. Braun

“New Series of Tube Straightening Machines - Advantages and Characteristic Features” ................................................................. 237
A. Lietkin

“Mastering Production of OCTG Thread Protectors and Thread Sealing Lubricants” .............................. 243
A. Kaduk

“Report on Modern Cold Pilger Mills for Production of Stainless Steel Tubes” .............................. N/A
Dr M. Baensch

“Trends of Development of Technologies for Production of Tubes of Refactory Metals in Ukraine” ........................................................................ 249
N. Turenkov

“Optimization of Extruded and Welded Stainless Tube HNO3-HF Acid Finishing” .............................. 253
W. Leveson-Gower

“Manufacture of Small Diameter Magnesium Tubes with Hot Extrusion and Drawing Processes” ........................................................................ 263
A. Golovko

“Upgrade of HPTR Mills” .................................................................................. 275
V. Mironenko

“New Generation Contact Materials for Use in Non-Destructive Testing” ............................................ 279
A. Shadoy

“Induction Heat Processing of Ferrous and Non-Ferrous Pipe” ......................................................... N/A
M. Whisken

“Equipment for In-Line Jet Degreasing of Stainless Steel Billets and Tubes” ...................................... 285
I. Davelman

“Designs and Materials Used for Pickling Tanks in the Tube Pickling Industry” .................................... 291
F. Nerat
“New Requirements for the Forming Process of SAW Pipes” ..................................................299
M. Decker

“Computer Aided Process Simulation for the Design and Manufacturing of High Quality Tube Mill Rolls AND Practical Results of Simulation Data Application at HFI ERW Mill” .................................................................305
A. Sedlmaier, A. Kovalenko

“ReLaser Vision for Quality Improvement in Tube & Pipe Manufacture” .........................327
R. Beattie

“The Applications of Quick Change Technologies to the High Precision Tube Mill Operating in a Just In Time Environment” .................................................................337
B Chidlow

“Application of Local Thermomechanical Treatment of Girth Joints in Making Long-length Longitudinal Weld Large Diameter Oil and Gas Line Pipes” .........................345
A. Ljuchkov

“JCOE Technology for the Economical & Flexible Production of Large Diameter Pipes” .................................................................351
B. Genser

“Optimization of Seam Annealing Process with the Help of 2D Simulations” ..............377
O. Waerstad

“Development of High Strength Steels and Technology for Spiral Welded Pipes” ............385
I. Pyshmintsev

“The Prospects of Production and Application of Seamless and Welded Pipes and Tubes with Protective Coating in Different Branches of the Ukrainian Economy” ........395
V. Agapov

“Improvement of Quality and Performance Reliability of Shaped Tubes at Dnepropetrovsk Tube Works JSC” .................................................................399
V. Furmanov

“Pressure Controlled Grinding” ..................................................................................403
M Löser

“Innovative Production of Stainless Steel Tubes” ..................................................N/A
H. Kloppenburg

“The Problems of Harmonization of Domestic Ukrainian Standards for Tubes with International Standards and Their Testing Methods” ..................413
V. Sokurenko

“Seam Annealing of HF Welded API Pipe – Quality Improvement and Operational Cost Reduction Resulting from Implementation of Seam-Annealing at HFI ERW Mill” .................................................................N/A
D. Gardiner

“Production of Oil and Gas Pipeline Pipes – New Tasks and Ways of Working Out” ......417
Y. Raychuk
“Producing Precision OD Tubes and Pipes Using Rotary Sizing Technology” ..................423
B. Chidlow

“Practical Aspects of Stainless Steel and Titanium Alloys Pipe Manufacturing for Special Applications Using Stiefel Mill” .................................................................433
V. Karpyuk

“Development of the Theory and Improvement of the Technology of Cold-formed Precision Tubes Manufacture Using the Processes of Drawing” ...........................................441
Y. Stasovskiy

“High Efficiency Process on Non-ferrous and Other Metal Tube Drawing on the Long Moving Mandrel” ........................................................................................................469
A. Lobanov

R. Didyk

“Rational Thermal and Deformation Parameters in Extrusion of Tubes of Low Plasticity Materials” ..................................................................................................................491
N. Bespalova

“Monocrystals as Billets for Making Fuel Element Shell Tubes” ........................................507
V. Balakin

“New Technology for Making Cold Worked Tubes of Non-ferrous and Ferrous Metals and Alloys” ..................................................................................................................513
M. Popov

“New Solutions in Production Technology of Tube-Casings of Heat-Generated Elements Manufactured from Zirconium Alloys” ..............................................................519
V. Vakhrusheva

“On Fictitious and Real Technologies of Reducing Tubes with Wall Thinning” ..............527
F. D. Davydov

“Revolutionised Machining of Premium Joints” .................................................................533
M. Gramer, W. Trommler, T. Freigang

“New Solutions in Titanium Alloy Tubular Stock, Tube and Hollow Die Forging Manufacture” ....................................................................................................................536
V. V. Tetyukhin

“Methods of Quality Improvement for High-Chromium Steel Tube Billets” ..................545
S. I. Gubenko, V. N. Bespalko, Y. Zhylenkova

“Structure Inhomogeneity in 08X18H10T Steel Tube Shells” .......................................548
S. I. Gubenko, V. N. Bespalko, A. E. Balyev

“Microstructure and Cold Deformation Influence on the Mechanical Properties of Large Diameter Welded Steel Pipes” .................................................................551
A. G. Kostryzhev, M. Strangwood, C. L. Davis
