Proceedings

DASC 2007
Third IEEE International Symposium on Dependable, Autonomic and Secure Computing

25-26 September 2007
Columbia, Maryland

Sponsored by
IEEE Computer Society, Technical Committee on Autonomous and Autonomic Systems
Indiana University, Purdue University, Indianapolis

Los Alamitos, California
Washington • Tokyo
DASC 2007
Third IEEE International Symposium on Dependable, Autonomic and Secure Computing

Table of Contents

Message from the DASC 2007 Chairs ................................................................. viii
Organizers ........................................................................................................... ix
International Advisory Committee ................................................................. x
Program Committee ............................................................................................ xiii
Steering Committee ............................................................................................ xix

Session 1: Self-

Building a Self-Healing Operating System .................................................. 3
   Francis M. David and Roy H. Campbell

Self-Configuration Techniques for MuniSocket ............................................. 11
   Nader Mohamed and Jameela Al-Jaroodi

Session 2: Dependability

Incorporating Modular Imperfect Coverage into Dynamic Hierarchical Systems Analysis .......... 21
   Prashanthi Boddu and Liudong Xing

A Coarse-Grained Pessimistic Message Logging Scheme for Improving Roll-Back
Recovery Efficiency .............................................................................................. 29
   Jin-Min Yang, Kin Fun Li, Da-Fang Zhang, and Jing Cheng

A Byzantine Fault Tolerant Distributed Commit Protocol ................................ 37
   Wenbing Zhao

Session 3: Security

Compiler-Directed Region-Based Security for Low-Overhead Software Protection .................. 47
   Vijay Kongubangaran, Olga Gelbart, Rahul Sinha, and Bhagirath Nanahiri

Towards a Proactive Fraud Management Framework for Financial Data Streams .................. 55
   Michael E. Edge, Pedro R. Falcone Sampio, and Mohammed Choudhury
Session 4: Autonomic Computing Systems

Challenges and Best Practices in Policy-Based Autonomic Architectures
Radu Calinescu

Using Atoms to Simplify Distributed Programs Checking
H. F. Li, Estam Al Maghayreh, and D. Gowsani

An Inference-Based Collaborative Filtering Approach
Jin-Min Yang and Kin Fun Li

Session 5: Performance and Reliability

How to Update Dependable Secure Computing Systems from a Survivability Assessment Perspective
Li Bai, Saroj Biswas, and Musoke Sendaula

Performance Analysis of CORBA Replication Models
Swapna S. Godbole and B. Dasanathy

Byzantine Fault Tolerance for Nondeterministic Applications
Wenbing Zhao

Session 6: Self-Improvement Based on Software and Hardware

Employing Expert Opinion and Software Metrics for Reasoning about Software
Norita Ahmad and Phillip A. Laplante

Hybrid Trust Information Exchange for Federated Systems
Zhengping Wu and Alfred C. Weaver

iKernel: Isolating Buggy and Malicious Device Drivers Using Hardware Virtualization Support
Lin Tan, Ellick M. Chan, Reza Farivar, Nevedita Mallick, Jeffrey C. Carlyle, Francis M. David, and Roy H. Campbell

Session 7: Networks and Systems

On TCP Performance in Flow-Based Mix Networks
Xinwen Fu, Shu Jiang, Wei Yu, Steve Graham, and Yong Guan

FileWall: A Firewall for Network File Systems
Stephen Smaldone, Aniruddha Bohna, and Liviu Iftode

Secure Multipath Routing Scheme for Mobile Ad Hoc Network
Binod Vaidya, JaeYoung Pyun, JongAn Park, and SeungJo Han
MBDD versus MMDD for Multistate Systems Analysis..............................................................172
Akhilesh Shrestha, Liudong Xing, and Yuanshan Dai

Author Index................................................................................................................................181
