## Feature Modeling

Automating Mappings between Use Case Diagrams and Feature Models for Software  
Product Lines ..................................................................................................................... 3  
  *Alexandre Bragança and Ricardo J. Machado*

Reasoning about Feature Models in Higher-Order Logic ............................................. 13  
  *Mikoláš Janota and Joseph Kiniry*

Feature Diagrams and Logics: There and Back Again .................................................. 23  
  *Krzysztof Czarnecki and Andrzej Wąsowski*

## Experience 1

Experiences with Product Line Development of Multi-discipline Analysis Software  
at Overwatch Textron Systems ....................................................................................... 35  
  *Paul Jensen*

Software Product Lines Approach in Enterprise System Development ..................... 44  
  *Yuzo Ishida*

Introducing Software Product Line Engineering for Metal Processing Lines  
in a Small to Medium Enterprise ................................................................................... 54  
  *David Sellier, Mike Mannion, Gorka Benguria, and Gorka Urchegui*

## Cost/Requirement

Impacts of Architecture and Quality Investment in Software Product Line Development .......... 63  
  *Makoto Nonaka, Liming Zhu, Muhammad Ali Babar, and Mark Staples*
### Production

The 3-Tiered Methodology: Pragmatic Insights from New Generation Software Product Lines ........................... 97  
*Charles W. Krueger*

Development and Configuration of Service-Based Product Lines ......................................................... 107  
*Alexander Gruler, Alexander Harhurin, and Judith Hartmann*

A Production System for Software Product Lines .......................................................... 117  
*Gary J. Chastek, Patrick Donohoe, and John D. McGregor*

### Variability Management

Automating Product-Line Variant Selection for Mobile Devices ............................................................. 129  
*Jules White, Douglas C. Schmidt, Egon Wuchner, and Andrey Nechypurenko*

Supporting Product Derivation by Adapting and Augmenting Variability Models ................................. 141  
*Rick Rabiser, Paul Grünbacher, and Deepak Dhungana*

Optimization of Variability in Software Product Lines ............................................................................. 151  
*Felix Loesch and Erhard Ploedereder*

### Experience 2

A Guide for Management and Financial Controls of Product Lines .................................................... 163  
*Yoshihiro Matsumoto*

Building Software Product Line from the Legacy Systems “Experience in the Digital Audio & Video Domain” .......................................................... 171  
*Kangtae Kim, Hyungrok Kim, and Woomok Kim*

A Component Model Supporting Decomposition and Composition of Consumer Electronics Software Product Lines .......................................................... 181  
*Chong-Mok Park, SeokjinHong, Kyoung-Ho Son, and Jagun Kwon*
Experience 3

Challenges of Establishing a Software Product Line for an Aerospace Engine Monitoring System ................................................................. 193
  Ibrahim Habli, Tim Kelly, and Ian Hopkins

Minimally Invasive Migration to Software Product Lines ........................................ 203
  Hans Peter Jepsen, Jan Gaardsted Dall, and Danilo Beuche

Dynamic Complexity and the Owen Firmware Product Line Program ...................... 212
  Holt Mebane and Joni T. Ohta

Aspect-Orientation/MDA

A Case Study Implementing Features Using AspectJ ............................................ 223
  Christian Kästner, Sven Apel, and Don Batory

Product Line Implementation Using Aspect-Oriented and Model-Driven Software Development ................................................................. 233
  Markus Voelter and Iris Groher

Higher-Order Transformations for Product Lines .................................................. 243
  Jon Oldevik and Øystein Haugen

Short Paper 1

Tailoring Infrastructure Software Product Lines by Static Application Analysis .......... 255
  Horst Schirmeier and Olaf Spinczyk

A Variability Modeling Method for Adaptable Services in Service-Oriented Computing ............ 261
  Soo Ho Chang and Soo Dong Kim

Short Paper 2

Why Does It Take That Long? Establishing Product Lines in the Automotive Domain ........ 269
  Christian Tischer, Andreas Müller, Markus Ketterer, and Lars Geyer

Software Product Lines Beyond Software Development ..................................... 275
  Scott G. Decker and Jim Dager

Author Index ........................................................................................................... 281
