American Institute of Chemical Engineers

Education

Presentations at the
2007 AIChE Annual Meeting

November 4-9, 2007
Salt Lake City, Utah, USA

Printed from e-media with permission by:
Curran Associates, Inc.
57 Morehouse Lane
Red Hook, NY 12571
www.proceedings.com
ISBN: 978-1-60560-002-4

Some format issues inherent in the e-media version may also appear in this print version.
# TABLE OF CONTENTS

**Nano-Particle Toughening of Epoxy Composites Using Polyethyleneimine Dendrimer Shell Materials**
Aaron Saks ................................................................. 1

**Synthesis of Starch-G-Polymethylmethacrylate through Emulsion Photopolymerization**
Dan Weber ........................................................................ 2

**Transport in Epdm Elastomer: Molecular Simulation and Experimental Study (No abstract)**
David T. Limmer ........................................................ 3

**Cellular Uptake of Modified Red Clover Necrotic Mosaic Virus and Small Molecule Release from the Virion**
Kenneth Wesley Overton ............................................. 4

**On-Board Hydrogen Storage and Production: An Application of Ammonia Electrolysis**
Amy Weber, Bryan K. Boggs ........................................... 5

**Direct Sequence Detection of Human H5 Influenza Viral RNA**
Matthew B. Kerby, Sarah Freeman, Kristina Prachanronarong, Andrew W. Artenstein, Steven M. Opal, Anubhav Tripathi .................................................. 22

**Amp-Activated Protein Kinase (AMPK) May Affect Fat Storage by Controlling an Enzyme That Oxidizes Fatty Acids**
Alisha Bloodworth, Elmus G. Beale .................................. 25

**Retrofit of Sour Water Networks in Oil Refineries: A Case Study**
Lisa Scodari, Daniel Sujo-Nava, C. Stewart Slater, Mariano Savelski, Kevin Dahm ............................................. 33

**Porous Monolith Structures in Microfluidic Devices**
Thomas Schwei .............................................................. 34

**Molecular Interactions to Product and Process Design: Crystallization, Education and Beyond**
Ryan C. Snyder .............................................................. 35

**3-Dimensional in Vitro Model of Hepatic Tissue for Investigating Liver Physiology and Pathophysiology**
Rohit Jindal ................................................................. 37

**Advanced Nonlinear Programming Formulations and Algorithms: Expanding the Scope of Industrial Nmpc Applications**
Victor M. Zavala .......................................................... 38

**Transport Phenomena within Tissue Engineering Materials**
Benjamin J. Lawrence ................................................... 41

**Nanocomposite Properties and the Polymer Interphase**
Karl Putz .......................................................................... 42

**Effects of Nanoparticle Addition on the Bulk, Surface and Interfacial Properties of Polymers**
Anish Tuteja, Wonjae Choi, Joseph M. Mabry, Michael E. Mackay, Gareth H. McKinley, Robert E. Cohen ...................................................... 43
Towards Understanding the Gecko Adhesive System ......................................................... 46
Noshir S. Pesika

Engineering Drug, Gene and Cell-Based Delivery Systems for the Treatment of Human Disease ................................................................................................. 47
Michelle R. Dawson, Dan G. Duda, Rakesh K. Jain

Engineering a Multifunctional Scaffold for Spinal Cord Repair ........................................... 49
Noelle K. Comolli, Itzhak Fischer, Birgit Neuhuber, Anthony M. Lowman

Effect of Phosphorus on Acid Cracking of Lipids for the Production of Green Diesel ........... 50
Stephen Dufreche, Rafael Hernandez, Todd French, Mark G. White, Earl G. Alley, William E. Holmes

Proteins of Novel Composition .......................................................................................... 51
Tae Hyeon Yoo

Enhanced Polymeric Nanoparticles for Gene Delivery ......................................................... 52
Jordan J. Green

Processing and Phase Behavior: Tools for Creating Nanoscale Polymer Structures .............. 53
Christopher J. Ellison

Novel Methods for Microfabrication of Cellular Interactions and Detection of Cell Phenotype Expression ............................................................................................................. 55
Ji Youn Lee

Quantifying Cellular Physiology Using Metabolic Models and Isotope Labeling ................... 56
Patrick F. Suthers

Molecular Simulation of Heterogeneous Polymer Systems: From Biomimetic Materials to Energy Research .................................................................................................................. 58
Vikram K. Kuppa

Analysis of Recognitive Polymer Systems: Focusing on the Tailorability of the Macromolecular Structure in Order to Enhance Binding Characteristics .................................................. 59
Asa D. Vaughan

Dynamics of DNA and Swimming Microorganisms Using Theory and Coarse-Grained Simulations ...................................................................................................................... 60
Patrick T. Underhill

Improved Polymer Properties for Use in Nanolithography .................................................. 61
Robert A. Riggelman, Juan De Pablo

Nucleation Behavior of Nanoparticles and Crystals ............................................................ 62
Venkateswarlu Bhamidi

Isotopically Nonstationary Metabolic Flux Analysis ............................................................ 64
Jamey D. Young

Colloidal Suspensions: Fundamental Physics and Engineering Applications ..................... 66
Jacinta C. Conrad

Molecular Mechanisms for the Aggregation of Proteins and Therapeutic Antibodies .......... 68
Naresh Chennamsetty

Surfactant Adsorption at Fluid Interfaces .......................................................................... 69
Alissa J. Prosser

Reactions of Alcohols over H^+/ZSM-5 ................................................................................. 70
Amit C. Gujar, Hossein Toghiani, Mark G. White

Multi-Compartment Drug Carriers .................................................................................... 76
Guohui Wu, Joseph A. Zasadzinski

Cellular Bioengineering: Towards in Vitro Models for Disease Pathophysiology and Toxicology .................................................................................................................. 77
Anand K. Ramasubramanian
At the Interface of Neuroscience and Cell & Biomolecular Engineering ................................. 78
  David Colby

Drug Delivery through Epithelial Tissues ................................................................. 79
  Harvinder S. Gill

Ordering of Spherical-Domain Block Copolymers in Monolayers and Multilayers .......... 80
  Gila E. Stein, Edward J. Kramer

Systems Biology Approach to Endocrine Signaling ..................................................... 82
  Pamela K. Kreeger

Reversible Addition-Fragmentation Chain Transfer in Microemulsion Polymerizations ...... 84
  Jennifer O’Donnell, Eric W. Kaler

Nanoengineering Systems for Targeted Drug Delivery, Cell-Based Therapy, and
Microfluidic Biosensors/chips .................................................................................. 85
  Hongyan He

Computer Simulations of Complex Fluids and Materials .............................................. 86
  O. Berk Usta

in Aqueous Electrolyte Solutions ........................................................................... 87
  James B. Falabella, Xin-Sheng Chai, Amyn S. Teja

Determination of Ozone Uptake in Human Lungs: Study of the Effects of Smoking ........ 88
  Tim Brenza, Melissa Lowe Bates, Aziz Ben-Jebria, James Ultman

Protein Engineering Strategies for the Creation of Fluorescent Biosensors ................ 90
  Tej Pavoor, Eric Shusta

Modeling Extracellular Mass Transport of Nutrients and Byproducts around Metabolizing Bacteria ..................................................................................... 91
  Michael R. Benoit

Engineered Polymer Vesicles (Polymersomes) for Targeted Adhesion,
Bioimaging, and Controlled Delivery ...................................................................... 92
  Anthony J. Kim, Daniel A. Hammer

Investigating Membrane Surface Interactions with Lipid-Coated Particles ................... 93
  Esther W. Gomez, Jay T. Groves

Acid Catalysis of Lipids to Produce Green Fuels: Advancing Biofuels in a Fossil Fuel World ........................................................................................................... 94
  Tracy J. Benson

Computational and Theoretical Studies of Soft Materials and Biological Systems .......... 96
  Arthi Jayaraman, Kenneth S. Schweizer, Carol K. Hall, Jan Genzer

Designing for Sustainability with CO2-Tunable Solvents .......................................... 98
  Jackson W. Ford, Charles L. Liotta, Charles A. Eckert

  Xiaoyan Wang, Benny D. Freeman, Isaac C. Sanchez

Surfactants and Polyelectrolytes as Building Blocks for Soft Materials ..................... 100
  Yakov Lapitsky, Molly S. Shoichet, Eric W. Kaler

Hydrophilic Biopolymer Mediated Enhancement of Lung Surfactant Adsorption .......... 102
  Patrick C. Stenger, Joseph A. Zasadzinski

Engineering Protein Folding and Function Using Native Escherichia Coli Processes .... 104
  Adam C. Fisher, Matthew DeLisa

Growth, Characterization, and Material Property Control of Silicon Carbide Thin Films for Micro- and Nanosystems ................................................................. 105
  Christopher S. Roper
Affinity Adsorption of Viruses ................................................................. 106
    Caryn L. Heldt, Patrick V. Gurgel, Lee-Ann Jaykus, Ruben Carbonell

From the Synthesis and Characterization of Electronic and Optical Oxide Nanostructured Materials towards Device Applications ........................................... 107
    Yuanbing Mao

Fundamental Mechanisms of Biomaterial Interfaces: An Integrated Simulation and Experimental Approach ................................................................. 110
    Jason C. Hower, Shaoyi Jiang

Integrating Multiscale Models, Experiments, Dynamics and Control: Applications in Energy Generation and Systems Biology ........................................ 111
    Vinay Prasad

Dynamics of Colloidal Dispersions at Equilibrium and Under Flow ........................................ 113
    Samantha G. Anekal

“Nanoions”: Fundamental Properties and Applications of Charged Nanoparticles ................. 114
    Kyle J. M. Bishop, Bartosz A. Grzybowski

Mechanistic Study of Methanol Synthesis Via CO2 Hydrogenation on Cu(111) ................... 115
    Lars C. Grabow

System Engineering: Applications for Space Missions, Energy Analysis and Healthcare ................................................................. 116
    Selen Aydogan-Cremaschi

Engineering Model Catalysts towards Efficient Energy Conversion .................................... 117
    Weiwei Gao, Eric I. Altman, Cynthia M. Friend

Simulations of Polymer Self-Assembly Using Field Theoretic Techniques .......................... 118
    Erin Lennon, Glenn H. Fredrickson

Directed Evolution of Enzymes and Biosynthetic Pathways ............................................ 119
    Tyler Johannes, Huimin Zhao

Developing Predictive Statistical Models to Understand the Dynamics of Inflammatory Cell Signals ........................................................................ 120
    Arthur C. Goldsipe, Christopher W. Espelin, Peter K. Sorger, Douglas A. Lauffenburger

Field-Mediated Control of Materials Synthesis and Biological Applications ........................ 121
    William D. Ristenpart

Micro/nanofluidic Devices for Sensing and Reaction Engineering ....................................... 124
    Adarsh D. Radadia

Design of Multifunctional Polymer-Polymer Nanocomposites ........................................ 125
    Aflal M. Rahmathullah, Giuseppe R. Palmese

Nanostructured Oxide for Energy Storage and Conversion ............................................... 126
    Donghai Wang

Measuring and Modeling Fundamental Parameters from Gas Phase Electrophoresis ............ 127
    Leonard F. Pease III

Biomedical and Energy Applications of Lipids .................................................................... 128
    Liangfang Zhang, Steve Granick, Robert Langer

Micro/nano/molecular Engineering of Soft Materials for Drug/gene Delivery and Biosensing ................................................................. 129
    Jingjiao Guan, L. James Lee

High Surface Area Ocvd Deposited Pyrrole-Co-Thiophene-3-Acetic Acid Conducting Copolymer Films for Resistance-Based Sensing Applications ........... 131
    Sreeram Vaddiraju, Kris Senecal, Karen K. Gleason
What Can Fundamental Research on Metal and Metal Oxide Surfaces Contribute to Solutions of Global Energy and Environmental Problems? ................................................................. 132
Ling Zhou, Robert J. Madix

Self-Assembly of Magnetorheological Fluids Confined in Microfluidic Devices ................................................................. 133
Ramin Haghgooie

Computational and Experimental Studies of Protein-Self Assembly with Applications in Nanotechnology and Medicine ................................................................. 135
Troy Cellmer

Probing the Molecular Mechanism of ATP Bioenergy Conversion: A Multifaceted Approach Combining Computational Modeling with Single Molecule Analysis ................................................................. 136
Jung-Chi Liao

Novel Nanomaterials Development in Membrane Electrode Assembly for Proton Exchange Membrane Fuel Cells ................................................................. 138
Zhongwei Chen, Yushan Yan

Nanomaterials for Energy Conversion .................................................................................................................................................. 141
Michael P. Tate, Hugh W. Hillhouse

Sustainability, Green Engineering and Industrial Ecology ............................................................................................................................................. 143
Arunprakash T. Karunanithi

Simulation Studies of Phase Behavior and Crystal Structures of Colloidal Suspensions ............................................................................................................................................. 144
Antti-Pekka Hynninen

Large-Scale Synthesis of Salt and Metal Nanoparticles by Flame Synthesis and Application of Magnetic Nanobeads in Separation Technology ................................................................. 145
Robert N. Grass

Combining Colloidal Chemistry and Microfluidics .................................................................................................................................................. 147
Rhutesh K. Shah

Properties of Surfaces and Films from Viscous Liquids to Elastic Solids ............................................................................................................................................. 148
Hongbo Zeng, Jacob N. Israelachvili, Matthew Tirrell, L. Gary Leal

Sustainable Alternatives for Chemical Processing ............................................................................................................................................. 149
Jason P. Hallett

Cardiac Tissue Engineering Using Embryonic Stem Cell Derived Cardiomyocytes and Novel Biomaterials ............................................................................................................................................. 150
Elizabeth A. Lipke

Self-Assembly of Functional Rod-Coil Block Copolymers ............................................................................................................................................. 152
Bradley D. Olsen, Rachel A. Segalman

Multiscale Modeling of Viscoelastic Flow and Complex Fluids in Micro/nanofluidics ............................................................................................................................................. 155
Xin Hu, Ly James Lee

A Systems Biology Approach to Protein Translation ............................................................................................................................................. 157
Hermioni Zouridis, Vassily Hatzimanikatis

Modulating Catalytic Properties at the Gas-Solid Interface ............................................................................................................................................. 159
Raj Ganesh Pala

Towards Solid State Silicon Nano and Microwire Photovoltaic Devices ............................................................................................................................................. 162
Michael A. Filler, Brendan M. Kayes, Morgan C. Putnam, Michael D. Kelzenberg, Harry A. Atwater

Metabolic Engineering of the Terpenoid and Indole Pathways in Catharanthus Roseus Hairy Roots ............................................................................................................................................. 164
Christie A.M. Peebles, Susan I. Gibson, Jacqueline V. Shanks, Ka-Yiu San

Effects of Confinement and Interfaces on Structural Relaxation of Thin Polymer Films above, below, and at the Glass Transition ............................................................................................................................................. 165
Rodney D. Priestley
Engineering Extremophilic Chaperones for Biocatalysis and Nanobiotechnology ............ 167
  Timothy Whitehead

Computational Chemistry for Better Catalysis ................................................................. 169
  N. Aaron Deskins

Modeling Biological Ligand Design with Pharmaceutical Accuracy ................................. 171
  Michael R. Shirts

Directed Differentiation and Tissue Engineering of Keratinocytes Derived from Human Embryonic Stem Cells ........................................................................................................ 172
  Christian M. Metallo, Lin Ji, Juan J. de Pablo, Sean P. Palecek

Engineering the Ribosome for the Development of New Technologies ............................. 173
  Lydia M. Contreras, Matthew P. DeLisa

Automating Development of Genome-Scale Metabolic Networks: Clostridium Acetobutylicum, a Known Singularity and Biofuel Production ......................................................... 174
  Ryan S. Senger, Eleftherios T. Papoutsakis

Enabling Microscopic Simulators to Perform System-Level Analysis of Viscoelastic Flows ............................................................................................................................. 175
  Zubair Anwar, Robert C. Armstrong

New Materials for Reduced Cost, High Performance, Micro Direct Methanol Fuel Cells ...... 177
  William Mustain

Insights on Biological and Material Properties of Nanoscale Systems from Multiscale Modeling, Simulation, and Experiment .................................................................................. 180
  Elaine R. Chan

Development of a Biomems Pulsatile Hormone Delivery System ...................................... 182
  Eric E. Nuxoll

Molecular Engineering of Surfaces for Biomaterials and Biosensors ............................... 183
  Matthew Bernards, Shaoyi Jiang

Micro/nano Electrochemical Systems for Sensor and Energy Applications ........................ 186
  Ilwhan Oh

Catalytic Routes for the Production of Fuels and Chemicals ............................................. 188
  Carsten Sievers, Pradeep K. Agrawal, Christopher W. Jones, Johannes A. Lercher

Solvent Design for Pharmaceutical Process ....................................................................... 191
  Charles Acquah

Copper Electrodeposition Onto Resistive Ruthenium Substrates in the Presence of Solution Additives .................................................................................................................. 192
  Jennifer Younker

Nanocomposites of Polyurethane Elastomers ................................................................... 193
  J. J. Huang, S. M. Liff, G. H. McKinley, M. C. Boyce

Multiscale Approaches towards Nanomaterials Design: Microporous Thin Films and Nanoparticle Assemblies ................................................................. 194
  Mark A. Snyder

Engineering Novel Surfaces to Control Cell Adhesion and for Drug Delivery Applications ................................................................................................................................. 197
  Srivatsan Kidambi

Time-Series Transcriptomic Analysis of a Systematically Perturbed Arabidopsis Thaliana Liquid Culture System: A Systems Biology Perspective .................................................. 198
  Bhaskar Dutta, Maria Klapa

Analysis of Transcription Networks .................................................................................. 199
  Mark P. Brynildsen, James C. Liao
