The 18th IEEE International Symposium on Software Reliability

Greetings from the General and Program Chairs ...........................................................viii
Organizing Committee ..................................................................................................................ix
Program Committee ..................................................................................................................xi
Reviewers .......................................................................................................................................xii
Secondary Reviewers ..................................................................................................................xiv

Session 1: Reliability of Software Systems

Sensitivity of Website Reliability to Usage Profile Changes .........................................................3
  Kim Weyns and Martin Höst

Measuring Software Reliability in Practice: An Industry Case Study ......................................9
  Saida Benlarbi and David Stortz

Software Reliability Modeling with Test Coverage: Experimentation and Measurement with a Fault-Tolerant Software Project ..............................................................17
  Xia Cai and Michael R. Lyu

Session 2: Dependable Software Systems

  Barbara Gallina, Nicolas Guelfi, and Alexander Romanovsky

Towards Self-Protecting Enterprise Applications ....................................................................39
  Davide Lorenzoli, Leonardo Mariani and, Mauro Pezzè

Reliability Modeling of a 1-Out-of-2 System: Research with Diverse Off-the-Shelf SQL Database Servers ...................................................49
  Peter Bishop, Ilir Gashi, Bev Littlewood, and David Wright
Session 3: Verification & Validation

Corroborating User Assessments of Software Behavior to Facilitate Operational Testing .................................................61
Vinay Augustine and Andy Podgurski

Requirement Error Abstraction and Classification: A Control Group Replicated Study.........................................................71
Gursimran S. Walia, Jeffrey C. Carver, and Thomas Philip

Prioritization of Regression Tests Using Singular Value Decomposition with Empirical Change Records ...................81
Mark Sherriff, Mike Lake, and Laurie Williams

Session 4: Security Testing and Analysis

Testing Security Policies: Going Beyond Functional Testing .................................................................................................93
Yves Le Traon, Tejeddine Mouelhi, and Benoit Baudry

Integrated Software Vulnerability and Security Functionality Assessment.............................................................103
Xiangrong Wang, Hang Shi, Tze-Yau William Huang, and Frank C. Lin

A Comparison between Internal and External Malicious Traffic .....................................................................................109
Michel Cukier and Susmit Panjwani

Session 5: Test Automation

Automated Oracle Comparators for Testing Web Applications ..........................................................................................117
Sara Sprenkle, Lori Pollock, Holly Esquivel, Barbara Hazelwood, and Stacey Ecott

On the Impact of Injection Triggers for OS Robustness Evaluation ....................................................................................127
Andreas Johansson, Neeraj Suri, and Brendan Murphy

Using Machine Learning to Support Debugging with Tarantula ....................................................................................137
Lionel C. Briand, Yvan Labiche, and Xuejiao Liu

Session 6: Software Security

Statistical Inference of Computer Virus Propagation Using Non-Homogeneous Poisson Processes .........................149
Hiroyuki Okamura, Kazuya Tateishi, and Tadashi Dohi

Applying Software Reliability Models on Security Incidents .........................................................................................159
Edward Condon, Michel Cukier, and Tao He
Session 7: Testing Techniques

Generating Trace-Sets for Model-Based Testing .................................................................171
  Birgitta Lindström, Paul Pettersson, and Jeff A. Offutt

Improving Constraint-Based Testing with Dynamic Linear Relaxations-MISSING ..................181
  Tristan Denmat, Arnaud Gotlieb and Mireille Ducasse

Intra-Class Testing of Abstract Class Features .........................................................................191
  Peter J. Clarke, Djuradj Babich, Tariq M. King, and James F. Power

Session 8: Metrics and Measurements

Correlations between Internal Software Metrics and Software Dependability in a Large Population
  of Small C/C++ Programs ......................................................................................................203
  Meine J.P. van der Meulen and Miguel A. Revilla

Using In-Process Testing Metrics to Estimate Post-Release Field Quality ..................................209
  Nachiappan Nagappan, Laurie Williams, Mladen Vouk, and Jason Osborne

Data Mining Techniques for Building Fault-proneness Models in Telecom Java Software ..........215
  Erik Arisholm, Lionel C. Briand, and Magnus Fuglerud

Session 9: Software Quality Prediction

Predicting Subsystem Defects Using Dependency Graph Complexities ..................................227
  Thomas Zimmermann and Nachiappan Nagappan

Fault Prediction Using Early Lifecycle Data ............................................................................237
  Yue Jiang, Bojan Cukic, and Tim Menzies

Non-parametric Predictive Inference of Preventive Rejuvenation Schedule in Operational Software Systems ....247
  Koichiro Rinsaka and Tadashi Dohi

Author Index ..........................................................................................................................257
