Proceedings

Improving Patient Safety through Medical Device Interoperability and High Confidence Software

2007 Joint Workshop on High Confidence Medical Devices, Software, and Systems and Medical Device Plug-and-Play Interoperability

HCMDDSS / MD PnP 2007

25-27 June 2007 • Cambridge, Massachusetts
# Table of Contents

**Preface** ............................................................................................................................... ix  
**FDA Perspective** .................................................................................................................. xii  

## FULL PAPERS

### Interoperability Challenges

Medical Device Interoperability—Assessing the Environment......................................................... 3  
*Kathy Lesh, Sandy Weininger, Julian M. Goldman, Bob Wilson, and Glenn Himes*

Moving Toward Semantic Interoperability of Medical Devices....................................................... 13  
*John J. Garguilo, Sandra Martinez, Richard Rivello, and Maria Cherkaoui*

### High Confidence Medical Device Software

Formal Methods Based Development of a PCA Infusion Pump Reference Model: 
Generic Infusion Pump (GIP) Project.............................................................................................. 23  
*David Arney, Raoul Jetley, Paul Jones, Insup Lee, and Oleg Sokolsky*

Point-of-Care Support for Error-Free Medication Process ............................................................ 34  
*J. W. S. Liu, C. S. Shih, H. C. Yeh, P. C. Hsiu, W. H. Chang, P. H. Tsai, and C. Y. Yu*

A Survey of Software Engineering Techniques in Medical Device Development.......................... 46  
*Raimund L. Feldmann, Forrest Shull, Christian Denger, Martin Höst, and Christin Lindholm*
Sensor Networks

User Access of Public Shared Devices in Pervasive Computing Environments ............................................... 57
  David Jea, Ian Yap, and Mani Srivastava

PAS: A Wireless-Enabled, Sensor-Integrated Personal Assistance System
for Independent and Assisted Living............................................................... 64
  Jennifer C. Hou, Qixin Wang, Bedoor K. AlShebli, Linda Ball, Stanley Birge,
  Marco Caccamo, Chin-Fei Cheah, Eric Gilbert, Carl A. Gunter, Elsa Gunter,
  Chang-Gun Lee, Karrie Karahalios, Min-Young Nam, Narasimhan Nitya,
  Chaudhri Rohit, Lui Sha, Wook Shin, Sammy Yu, Yang Yu, and Zheng Zeng

A Novel Method and Testbed for Sensor Management and Patient Diagnosis............................................... 76
  Winston H. Wu, Maxim A. Batalin, William J. Kaiser, Majid Sarrafzadeh,
  and Alex A. T. Bui

Platform Design for Health-Care Monitoring Applications ........................................................................ 88
  Roozbeh Jafari, Ruzena Bajcsy, Steven Glaser, Bruce Gnade, Marco Sgroi,
  and Shankar Sastry

Interoperability Solutions

Interoperable Medical Devices due to Standardized CANopen Interfaces................................................. 97
  Reiner Zitzmann and Thilo Schumann

Building Reliable MD PnP Systems........................................................................................................ 104
  Mu Sun, Qixin Wang, and Lui Sha

Agent-Based Plug-and-Play Integration of Role-Enabled Medical Devices............................................. 111
  Giacomo Cabri, Francesco De Mola, and Letizia Leonardi

Plug-and-Play and Network-Capable Medical Instrumentation and Database
with a Complete Healthcare Technology Suite: MediCAN......................................................... 122
  Paul K. McKneely, Frank Chapman, and Deniz Gurkan

ABSTRACTS FOR POSTERS AND DEMOS

Interoperability Challenges

Using Clinical Workflows to Improve Medical Device/System Development ............................................ 133
  Tracy Rausch and Jennifer Leigh Jackson

Ensuring Sufficient Breadth in Use Case Development: How Should Non-functional
Requirements Be Elicited and Represented? .................................................................................. 135
  Rick Schrenker

An Intensive Care Specific Electronic Medical Record: Is There Transparency? ........................................ 137
  Frank D. Sites, Victoria L. Rich, and C. William Hanson
Technology Developments for the Image-Guided Suite of the Future

Kevin Cleary and Mary Lou Ingeholm

Considering Cardinality in a Medical Device PnP System

William Spees

Novel ISO/IEEE 11073 Standards for Personal Telehealth Systems Interoperability

L. Schmitt, T. Falck, F. Wartena, and D. Simons

Improving the Safety of Patient-Controlled Analgesia Infusions with Safety Interlocks and Closed-Loop Control

Philippe-Antoine Cortès, Shankar M. Krishnan, Insup Lee, and Julian M. Goldman

Interoperability Solutions

Towards a Service-Oriented Architecture for Interconnecting Medical Devices and Applications

M. Strähle, M. Ehlbeck, V. Prapavat, K. Kück, F. Franz, and J.-U. Meyer

Designing and Developing Medical Device Software Systems Using the Model Driven Architecture (MDA)

Amen Ra Mashariki, LeeRoy Bronner, and Peter Kazanzides

Use Case Demonstration: X-Ray/Ventilator

David Arney, Julian M. Goldman, Insup Lee, Ersel Llukacej, and Susan Whitehead

Workflow-Based Integration Framework for Medication-Use Process

Han-Chun Yeh, Chi-Sheng Shih, and Jane W.-S. Liu

Standardization of Acute Health Care Digital Communications

J. Waters, J. Ojala, and J. LaCourse

MD-Adapt: A Proposed Architecture for Open-Source Medical Device Interoperability

John Hotchkiss, Jeffrey Robbins, and Michael Robkin

High Confidence Medical Device Software

Software Certification for Distributed, Adaptable Medical Systems: Position Paper on Challenges and Paths Forward

Kurt Rohloff, Richard Schantz, Partha Pal, and Joseph Loyall

Cyber-Physical System Software for HCMDSS

Christopher Gill

Towards Reconfigurable Embedded Medical Systems

Tammara Massey, Foad Dabiri, Roozbeh Jafari, Hyduke Noshadi, Philip Brisk, William Kaiser, and Majid Sarrafzadeh

FDA: Between Process and Product Evaluation

Marwan M. Abdeen, Wolfram Kahl, and Tom Maibaum
Sensor Networks

MedSN System for In-Home Patient Monitoring: Architecture, Privacy and Security .................................................................................................................................................................................................189
Philip Kuryloñski, Sameer Pai, Stephen Wicker, and Yuan Xue

A Rule-Based Decision Framework for Medical Sensor Networks .................................................................................................................................192
Sowmya Manjanatha, Azer Bestavros, Mark Gaynor, and Steve Moulton

Potential Alternative Signal Sampling and Reconstruction Strategy for Low Power Embedded Sensors ..................................................................................................................................................................................194
Tomasz J. Petelenz and Christopher Sikorski

Miscellaneous

Using Medical Devices to Teach Formal Modeling ..................................................................................................................................................................................201
Orieta Celiku and David Garlan

Dynamic Fall Detection and Pace Measurement in Walking Sticks ..................................................................................................................................................204
Oscar Almeida, Ming Zhang, and Jyh-Charn Liu

Author Index ................................................................................................................................................................................207
