Proceedings
Thirteenth IEEE International Conference on the Engineering of Complex Computer Systems

ICECCS 2008
31 March-4 April 2008 • Belfast, Northern Ireland

Sponsored by
IEEE Computer Society Technical Committee on Complexity in Computing (TC-CCX)

In cooperation with
The University of Ulster Computer Science Research Institute (CSRI)
The University of Ulster Centre for Software Process Technologies (CSPT)
Lero: The Irish Software Institute

Los Alamitos, California
Washington • Tokyo
Table of Contents

13th IEEE International Conference on Engineering of Complex Computer Systems

ICECCS 2008

Foreword ................................................................................................. viii
Conference Organization........................................................................................................ ix
Program Committee.......................................................................................................... x
Sponsors ......................................................................................................................... xi

Keynotes
Verified Software: Theories, Tools, Experiments ................................................................. 3
Sir Tony Hoare

Global Software Engineering Research in a Small Country .................................................... 4
Kevin Ryan

Session I: Verification
Verifying Statecharts with State Invariants ........................................................................ 7
Emil Sekerinski

Verifying Semistructured Data Normalization Using PVS .................................................... 15
Scott Uk-Jin Lee, Jing Sun, Gillian Dobbie, and Lindsay Groves

A Scalable Approach to Multi-style Architectural Modeling and Verification .................... 25
Stephen Wong, Jing Sun, Ian Warren, and Jun Sun

Session II: Specification and Design
Revisiting Safe Realizability of Message Sequence Charts Specifications .......................... 37
Abdolmajid Mousavi and Behrouz H. Far

iPSL: An Environment for IP-Based PSL Specification ....................................................... 46
Naiyong Jin, Juan Zhou, and Taoyong Ni

Task Mapping in Heterogeneous MPSoCs for System Level Design .................................. 56
Kugan Vivekanandarajah and Santhosh Kumar Pilakkat

Session III: Synchronization and Scheduling
High-Precision Relative Clock Synchronization Using Time Stamp Counters .................. 69
Guo-Song Tian, Yu-Chu Tian, and Colin Fidge

Integrated Real-Time Scheduling and Communication with Probabilistic Timing Assurances in Unreliable Distributed Systems ................................................................. 79
Fei Huang, Kai Han, Binoy Ravindran, and E. D. Jensen
Session IV: Testing and Prediction
Why Predicting Outliers in Software is a Good Thing to Do! ................................................................. 91
Norm Schneidewind and Mike Hinchey

On Extracting Tests from a Testable Model in the Context of Domain Engineering ........................................... 98
Soheila Bashardoust-Tajali and Jean-Pierre Corriveau

Session V: Web Services and Pervasive Computing
A Formal Model of Semantic Web Service Ontology (WSMO) Execution .................................................. 111
Hai H. Wang, Nick Gibbins, Terry Payne, Ahmed Saleh, and Jun Sun

Jini++: A Framework for Developing Pervasive and Wireless Distributed Applications .................................. 121
Zhi Quan Lee, Yuan Qin Zhu, and Ian Warren

GENESIS - A Framework for Automatic Generation and Steering of Testbeds of Complex Web Services .......... 131
Lukasz Juszczzyk, Hong-Linh Truong, and Schahram Dustdar

Invited Session I - Grand Challenge in Verified Software
Chair: Jim Woodcock

Linking VDM and Z ......................................................................................................................................... 143
Jim Woodcock and Leo Freitas

POSIX and the Verification Grand Challenge: A Roadmap ................................................................. 153
Leo Freitas, Jim Woodcock, and Andrew Butterfield

Invited Session II - Semantic Services and Mobility
Chair: Karin Breitman

Ambient Intelligence Applications: Introducing the Campus Framework .................................................. 165
Amal El Fallah Seghrouchni, Karin Breitman, Nicolas Sabouret, Markus Endler, Yasmine Charif, and Jean-Pierre Briot

Ubiquitous Service Regulation Based on Dynamic Rules ........................................................................... 175
José Viterbo F., Markus Endler, and Jean-Pierre Briot

The Semantic Web Services Challenge: Tackling Complexity at the Orchestration Level .......................... 183
Tiziana Margaria

Invited Session III: Experimental Software Engineering
Chair: Jose Carlos Maldonado

An Environment to Support Large Scale Experimentation in Software Engineering ...................................... 193
Guilherme H. Travassos, Paulo Sérgio Medeiros dos Santos, Paula Gomes Mian, Arilo Cláudio Dias Neto, and Jorge Biolchini

A Framework for Software Engineering Experimental Replications ............................................................ 203
Manoel G. Mendonça, José C. Maldonado, Maria C.F. de Oliveira, Jeffrey Carver, Sandra C.P.F. Fabbri, Forrest Shull, Guilherme H. Travassos, Erika Nina Höhn, and Victor R. Basili
ICECCS Workshop - UML & AADL’2008
Chairs: Agusti Canals, Sebastien Gerard, Isabelle Perseil

Session I
A Concrete Syntax for UML 2.1 Action Semantics Using +CAL
Isabelle Perseil and Laurent Pautet

An Execution Framework for MARTE-Based Models
Chokri Mraidha, Yann Tanguy, Christophe Jouvey, François Terrier, and Sébastien Gérard

Dealing with AADL End-to-End Flow Latency with UML MARTE
Su-Young Lee, Frédéric Mallet, and Robert de Simone

Session II
Contract-Based Approach to Analyze Software Components
A. Zitouni, L. Seinturier, and M. Boufaida

Arcade-A: Formal, Extensible, Model-Based Dependability Evaluation Framework
Hichem Boudali, Pepijn Crouzen, Boudewijn R. Haverkort, Matthias Kuntz, and Mariëlle Stoelinga

An Integrated MDA Approach with SysML and UML
Matthew Clayton Hause and Francis Thom

Session III
Code Generation from AADL to a Real-Time Operating System: An Experimentation Feedback
on the Use of Model Transformation
Matthias Brun, Jérôme Delatour, and Yvon Trinquet

AADL Execution Semantics Transformation for Formal Verification
Thomas Abdoul, Joël Champeau, Philippe Dhaussy, Pierre Yves Pillain, and Jean-Charles Roger

Automatic Composition of AADL Models for the Verification of Critical Component-Based
Embedded Systems
Hugues Balp, Étienne Borde, Grégory Haïk, and Jean-François Tilman

Session IV
Using AADL to Model a Protocol Stack
Didier Delanote, Stefan Van Baalen, Wouter Joosen, and Yolande Berbers

Modes in Asynchronous Systems
Jean-François Rolland, Jean-Paul Bodeveix, Mamoun Filali, David Chemouil, and Dave Thomas

A Study of the AADL Mode Change Protocol
Dominique Bertrand, Anne-Marie Déplanche, Sébastien Faucou, and Olivier H. Roux

Efficient Embedded Runtime Systems through Port Communication Optimization
Peter H. Feiler
