**Table of Contents**

Impact of Generators' Different Bidding Strategies on System Nash Equilibrium Point ................................................. 1  
A. Badri, S. Jadid, M. Parsa. Moghaddam  

Identification of Source to Sink Relationship in Deregulated Power Systems Using Artificial Neural Network ................................................................. 6  
M.W. Mustafa, Azhar B. Khairuddin, H. Shareef, S.N. Khalid  

Factoring the Price Elasticity of Demand in the Optimal Power Flow ........................................................................... 12  
Shahram Jadid, Nahid Aslani Amoli  

Optimal Price Bidding Strategy for Competitive Electricity Market in Singapore ......................................................... 18  
G.K. Toh, H.B. Gooi, Y.S. Tsan, W.T. Kok  

Experimental Analysis of Uniform Price and PAB Auctions in Electricity Markets .................................................... 24  
Haoyong Chen  

A Stochastic Model to Analyze the Economic Competitiveness of Wind Power Projects within a Restructured Electricity Industry ......................................................... 30  
Irina Falconett, Ken Nagasaka  

Unit Commitment by Selective Self-Adaptive ACO with Relativity Pheromone Updating Approach .............................. 36  
Songsak Chusanapipatt, Dulyatat Nuadholng, Sujate Janaran, Sukumvit Phoomvuthisarn  

High Accurate Fault Classification of Power Transmission Lines Using Fuzzy Logic ..................................................... 42  
Kaveh Razi, M. Tarafdar Hoq, Gh. Ahbabian  

Short-Term Load Forecasting Using Wavelet Transform and Support Vector Machines .................................................... 47  
J. Pahasa, N. Theera-Umpon  

Optimization of Unified Power Flow Controllers (UPFC) using GEA ........................................................................... 53  
Satyanarayana Ande, M.L. Kothari  

Determining Voltage Unstable Area in Power Systems Using Kohonen Neural Network .................................................. 59  
Muhammad Nizam, Azah Mohamed, Aini Hussain  

A Study of Electric Vehicle Battery Charging Demand in the Context of Singapore ......................................................... 64  
G.B. Shrestha, S.G. Ang  

Application of a New Optimization Method for Optimum Distribution Capacitor Planning ........................................... 70  
A.R. Seifi, M.R. Hesamzadeh, N. Hosseinzadeh, P. Wolfs  

Implementation of Telecontrol Protocols in SCADA Systems Based of FSM ................................................................. 75  
Fu Qin-cui, Chen Jian-yun, Liu Zi-ying  

Probabilistic Load Flow Solution Considering Reactive Power and Voltage Control .......................................................... 80  
N. Nimpitithan, N. Chayakubt  

Investigation of Solar Energy for Photovoltaic Application in Singapore ................................................................. 86  
Fan Jiang  

Voltage Sag Source Location Based on Instantaneous Energy Detection ................................................................. 90  
Wei Kong, Xinzhou Dong, Zhe Chen  

Inter-area Damping Controller Design Based on Mode Controllability and Observability ............................................ 95  
Feng Xiao, Yuanzhang Sun, Fang Yang, Lin Cheng  

A Practical Design of Fuzzy SMES Controller based on Synchronized Phasor Measurement for Interconnected Power System ........................................................................... 100  
Sanchai Dechanapaprittha, Komsan Hongesombut, Masayuki Watanabe, Yasunori Mitani, Issarachai Ngamroo  

An Energy Approach to Optimal Selection of Controllers/Sensors in Power System .................................................. 106  
N.D. Toan, D. Georges  

Utility application of a RTDS® Simulator ...................................................................................................................... 112  
Paul Forsyth, Rick Kuffel
# Table of Contents

A Data Mining Technique Based on Pattern Discovery and k-Nearest Neighbor Classifier for Transient Stability Assessment ................................................................. 118  
Wang Tongwen, Guan Lin

ATC Evaluation with Consideration of Load Changes and Participation Factors- A Sensitivity Analysis Approach ........................................................................................................................... 124  
N.D. Ghawghave, K.L. Thakre

A Mathematical Model and its Iterative Algorithm on Obtaining Optimal Capacity of P-S Station ................................................................. 130  
Fang Cao, Li-zi Zhang

Optimization of Combined Economic and Emission Dispatch Problem - A Comparative Study .................................................................................. 134  
R. Bharathi, M. Jagdeesh Kumar, D. Sunith, S. Premalatha

Well-Being Reliability Worth Indices due to Different Customer Outage Cost Functions .................................................................................. 140  
L. Goel, R. Gupta

Analysis of Var Benefits with Application to Var Planning ................................................................. 146  
Wenjuan Zhang, Fangxing Li, Leon M. Tolbert

PMU-based Two Stages State Estimation for Power System with Nonlinear Devices .................................................................................. 153  
C. Rakkaphet, S. Premruedeeprachacharn, S. Uatrongjit, N. R. Watson

Economic Dispatch of Power System Incorporating Wind Power Plant ................................................................................ 159  
Liu Yong, Shang Tao

Determination of Similar Days in Load Forecast Based on Grey Incidence Theory ................................................................. 163  

Dynamic Economic Load Dispatch by Calculus of Variation Considering Ramp Rate .................................................................................. 167  
Kentaro Asano, Teruhisa Kumano

A Mixed Integer Programming Formulation of Generator Startup Costs .................................................................................. 173  
Ramu D. Naidoo

An Error Reducing Algorithm of Innovation Graph Technique .................................................................................. 177  
Suquan Zhou, Yanjun Zhang, Yibin Shi, Tianyu An, Yongjie Leng

Measurement and Prediction of Microshock Currents and Voltages in an HV Laboratory .................................................................................. 183  
Y. Ahmed, S.M. Rowland

Design and Construction of a Rogowski's Coil with Compensated RC Integrators for Measuring Impulse Current ................................................................................ 189  
P. Yuthagowith, N. Pattanadech, A. Kunakorn, M. Leelajindakrainerk

RF Detection of Partial Discharge in Current Transformer ................................................................................ 193  
Mu-Kuen Chen, Wen-Yeau Chang, Jeng-Ming Chen, Chao-Yuan Cheng

Partial discharge location in transformers using frequency domain correlation ................................................................................ 197  
V. Jeyabalas, S. Usa

Dimensional effects on the measurement of permittivity of semiconducting materials used in high voltage XLPE cables ................................................................................ 201  
J.J. Yang, D.M. Zhang

Dispersion of Standard and Non-Standard Lightning Current to Ground in a Telecommunication Building ................................................................................ 207  
H. Ahmad, M. R. M. Esa, F. K. Chew

Study on Power Transformer Fault Diagnosis Method Based on Fuzzy Tree ................................................................................ 213  
Tong Wu, Guangyu Tu, Yi Luo, Jun Wu

An Apt Method for Fault Identification and Classification on EHV Lines Using Discrete Wavelet Transform ................................................................................ 217  
K. Gayathri, N. Kumarappan, C. Devi
## Table of Contents

Reconfiguration of Power Distribution System Using Multi Agent and Hierarchical Based Load Following Operation with Energy Capacitor System ........................................................................... 223  
Yaser Qudaih, Takashi Hiyama

Design Aspects of a Fuel-Cell based Converter ........................................................................... 228  
Ali I. Maswood

Network Topologies for increased Renewable Penetration ............................................................... 233  
T. Geetha, S. Jayachandran, V. Jayashankar

A Comparative Study of Sensor-less Control Strategies in PMSG Wind Turbine System .......... 239  
Kelvin Tan, Syed Islam, Mohammad A.S. Masoum

Autonomous Power Generating System With Generic N-Level Back-To-Back Converters .......... 245  
Lech M. Grzestak, Jacek G. Tomasik

Intelligent Optimal control or Matrix Converter Based New WECS for Performance Enhancement & Efficiency Optimization ................................................................. 251  
Vinod Kumar, Virendra Choudhary, R. R. Joshi, R. C. Bansal

Component Reliability Importance Indices for Electrical Networks ............................................. 257  
Patrik Hilber, Lina Bertling

The Use of Diagnostics Data for Condition Indexing of HV Components .................................. 264  
E. Gluski, J.J. Smit, Frank de Vries

Reliability Evaluation of an Interconnected System in Deregulated Market ............................... 270  
Ashok Kumar Mehta, Dipak Ray, Kesab Bhattacharya

System Identify of Servomechanisms with Nonlinear Friction ................................................. 276  
Xin Qian, Youyi Wang

Research on the Effects of Rotor Broken Bar Position on Induction Machine ......................... 282  
Hongzhong Ma, Ruiming Fang, P. Ju, Limin Zhang

Analysis and Comparative Study of Transient Inrush Current Reduction Methods ............... 287  
M. Tarafdar Hagh, M. Valizadeh

Design of Integral Motor and its Embedded System ................................................................. 292  
M.M. Ektasab

The Power Losses Calculation Technique of Electrical Machines Using the Heat Transfer Theory .................................................................................................................... 297  
P. Preeceha, J. Dejvises

Control and Performance of UPFC Connected to a Transmission Line ...................................... 302  
S. Tara Kalyani, G. Tulasiram Das

Partial Discharge Characteristics in Polyethylene using Pulse Shape and Pulse Sequence Analysis ................................................................................................................... 308  
Y.Z. Arief, R. Patsh, D. Benzorouk, J. Menzel

Newton-Raphson method to determine the intrinsic permittivity of XLPE cable .................... 314  
J.J. Yang, D.M. Zhang

Power Quality Survey of 33KV Indian Industrial Supply System: Results and Remedial Actions ................................................. 320  
B.E. Kushare, A.A. Ghatol, T.N. Date

Testing of Fluorescent Lamps for its Flickering Susceptibility towards Interharmonic Voltages .................................................................................................................. 326  
S. Chen, C.M. Lo, M.K. Foo, K.T. How

A Harmonic Selective Unified Power Quality Conditioner Using MVR with Kalman Filters ...................................................................................................................... 332  
K.H. Kwan, P.L. So, Y.C. Chu

An Overview of Various Approaches to Power System Harmonic Analysis ............................ 338  
Wang Yifei, S.Chen, S.S. Choi
Table of Contents

A Method for Online Monitoring the dissolved Gas in Power Transformer Oil Based on Temporal Characteristics .............................................................................................................................................................................. 344
Yinghui Kong, Jinsha Yuan, Tiefeng Zhang, Zhenbing Zhao

The Experimental Research of Vibration Characteristics under Induction Motor Windings Fault .............................................................................................................................................................................................................. 349
Hongzhong Ma, Yuanyuan Ding, Lahong Li, Fen Chen

Statistical Analysis of Diagnostic- and Life Time Data of High Voltage Components .............................................................................................................................................................................................................. 355
Rogier Jongen, Edward Gulsik, Johan Smit

Dedicated On-site Condition Monitoring of High Voltage Power Cables up to 150kV .............................................................................................................................................................................................................. 360
E. Gulsik, P.P. Seitz, B. Quak, F. Petzold, Frank de Vries

Vibration Research on Winding Faults of Induction Motor Based on Experiment Modal Analysis Method .............................................................................................................................................................................................................. 366
Hongzhong Ma, Huiamin Li, Weifang Xie, Fen Chen

Small Disturbance Voltage Stability Analysis Considering the Effect of Dynamic Load Parameters .............................................................................................................................................................................................................. 371

Feasibility Studies of Applying Kalman Filter Techniques to Power System Dynamic State Estimation .............................................................................................................................................................................................................. 376
Zhenyu Huang, Kevin Schneider, Jarek Nieplocha

Large Scale Power System Simulation and PMU Testing using a Real Time Digital Simulator .............................................................................................................................................................................................................. 383
T. Bi, Y. Zhang, X. Xiao, P. Forsyth, R. Wiercix

Feature Selection and Rule Extraction for the Estimation of Power System Transient Stability .............................................................................................................................................................................................................. 389
Guan Lin, Wang Lv, Wang Tong-wen

A Parallel WLS State Estimator on Shared Memory Computers .............................................................................................................................................................................................................. 395

Improved Fitting of z-domain Frequency Dependent Network Equivalents for Electromagnetic Transient Simulation .............................................................................................................................................................................................................. 401
N.R. Watson

Use of Local Information to Determine the Distance to Voltage Collapse .............................................................................................................................................................................................................. 407
M.H. Haque

Short-Term Splitting of a Power System with its Self-Restoration as Blackout Prevention .............................................................................................................................................................................................................. 413
J.D. Barkans, D.A. Zalostibaba

A new Approach for Designing Fuzzy Logic Power System Stabilizer .............................................................................................................................................................................................................. 419
M.L. Kothari, T. Jeevan Kumar

Modeling and Characteristics Research on EHV Magnetically Controlled Reactor .............................................................................................................................................................................................................. 425
Yao Yao, Baichao Chen, Cuihua Tian

A Load Parameter Identification Method Based on Wide Area Measurement .............................................................................................................................................................................................................. 431
Xiupeng Guan, Yuanzhang Sun, Lin Cheng

A Novel Modeling Approach for Exploring the Effects of UPFC on Restructured Electricity Market .............................................................................................................................................................................................................. 437
M.R. Hesamzadeh, A. Abrishami, N. Hosseinzadeh, P. Wolfs

An Analysis of Single Pole Reclosing on 500 kV Line in Thailand .............................................................................................................................................................................................................. 443
K, Ngamsanraoi, S. Premrudeepeeschacharn

A Global Approach of Electromagnetism Dedicated to Energy Efficiency .............................................................................................................................................................................................................. 449
Vincent Mazauric, Nadia Maizi, Philippe Wendling

Investigation of Radiated Emissions in Power Line Communication Networks .............................................................................................................................................................................................................. 455
L.B. Wang, P.L. So, K.Y. See, M. Oswal, T.S. Pang

Security Evaluation of Data Exchange Path in Infrastructure Networks .............................................................................................................................................................................................................. 461
R. Fooladi, M. Ahmadian, B. Hajiannejad

vi
Table of Contents

Automatic Power Meter Reading System Using GSM Network .......................................................... 465
H.G. Rodney Tan, C.H. Lee, V.H. Mok

An Integrated Boundary Protection Scheme for Power Transmission Line Systems .......................... 470

Improved Reliability by Simplification of a Sub-Transmission Protection System .......................... 476
A.L.J. Janssen, M.J.M. van Riet, F.J. Volberda, I. Karakoc

Directional Element of Distance Relay for Symmetrical Fault during Power Swing ......................... 482
Bin Su, Jianping Wang, Yongsheng Xu

Ground Fault Protection Scheme using Leakage Current in Ineffectively Earthed Power Systems ........... 488
Wang Yuanyuan, Zeng Xiangjun, S.S. Choi

Surge Arrester Requirements Study for Transformer Protection in 132 kV GIS Substation .................. 494
Z. Abdul Malek

Urban Power Network Substation Optimal Planning Based on Geographic Culture Algorithm .............. 500
Jun Liu, Haibo Gao, Jianguang Zhang, Bo Dai

Understanding Nuisance Shocking from an Electric Power Utility Perspective ............................... 505
Douglas Dorr, William Howe, Philip Lim, Charles Bray

Risk Determination in Respect to Sufficient Protection Against Lightning Overvoltages ................... 510
Christian Unger, Martin Sonnenschein

Enlargement of Stable Region in a Power System with Wind Energy Power Plant ............................ 515
Jorge Morel, Takashi Hiyama

Study on Transient Characteristics of Grid-connected Wind Power Generators .................................. 520
Yan Zhang, Li Lin, Yi-han Yang

Comparison between Conventional and Fuzzy Logic Controller-Based AVC Relay for Voltage Control Application of Distribution Networks ............................................................... 526
S.K. Salman, Z.G. Wan

Solid State Controller for an Isolated Wind Energy Conversion System Feeding Dynamic Loads ........... 532
Bhimsingh, Gaurav Kumar Kasal

An Improved Islanding Detection Method for Grid-Connected Photovoltaic Inverters ....................... 538
Yuan Ling, Zhang Xian-fei, Zheng Jian-yong, Mei Jun, Gao Ming

Application of Static Synchronous Series Compensator to Wind Farms ........................................... 544
Faeizi AL Jouder

Dynamic Characteristic Analysis of SSSC Based on 48-Pulse Inverter ............................................. 550
B. Geethalakshmi, T. Hajimunisa, P. Dananjayan

Efficiency Study of Adjustable Speed Drive with Dual Motor Connection ........................................ 555
C. Mitsui, S. Tu, Taufik, M. Anvari

Impact of Dynamic Loads on Stability of Shanxi Power Grid ......................................................... 559
Xiaoqing Han, Xiaoru Yang, Jiancheng Song, Xinhui Du

Reallocating-damping theory of PSS and HVDC modulation ............................................................ 564
Shanshan Zhao, Li Lin, Xiangyu Tao, Yonghua Yin

Employment of Power Transfer Distribution Factor for the Optimal Placement of FACTS Devices .......... 569
B. Sookananta, S.J. Galloway, G.M. Burt, J.R. McDonald

Varying Order Control-based Method for Transient Stability Calculation ........................................ 574
Xu Ying, Liu Rui-ye, Cai Zhong-qin, Bai Xue-feng, Guo Zhi-zhong

Development of Control Scheme of A Line-commutated SVC for Flicker Control ............................. 579
N. Gibo, K. Takenaka, K. Yukitira, K. Kouchi, N. Hatano, Y. Takeuchi, T. Ishiko
# Table of Contents

Online Power Quality Disturbances Identification Based on Data Stream Technologies .............................................. 585  
Yinghui Kong, Jinsha Yuan, Linlin Che, Jing An  

Power Quality Monitoring System Using Real-Time Operating System ................................................................. 591  
K. Yingkayun, S. Premruddipeecheecharn, K. Oranpioej  

Control Strategies for Load Compensation Using Instantaneous Symmetrical Component Theory Under Different Supply Voltages ........................................................................................................ 596  
Koteswara Rao U. Mahesh K. Mishra  

An Overview of International Harmonics Standards and Guidelines (IEEE, IEC, EN, ER and STC) for Low Voltage System ................................................................................................................. 602  
Shih Jong Benjamin Ong, Yeong Jia Cheng  

Neural Network Modeling of STATCOM Using the GAMMA and the RBF Identifiers .................................................... 608  
M. Tavakoli Bina, S. Rahimzadeh  

Damping of Power Swing by the Control of VSC-HVDC .............................................................................................. 614  
Si-Ye Ruan, Guo-Jie Li, Yuan-Zhang Sun  

Incorporation of VSC Transmission in Power-Flow Simulation ...................................................................................... 619  
N.R.Watson, J. Arrillaga  

Study on Stability of ±800kV UHVDC Transmission Project ....................................................................................... 625  
Xuehua Deng, Renjun Zhou, Chenniao Zhang  

A New Method in Modeling of Rotor Bar Skew Effect in Induction Motor Based on 2D-Modified Winding Function Method .............................................................................................................. 630  
K. Ahmadian, A. Jalilian  

Small Signal Model of a Power Electronic Converter .................................................................................................. 636  
Geoffrey N. Love, Alan R. Wood  

Pulse Propagation along Single Wire Electric Fences ......................................................................................................... 643  
D.J. Thrimavithana, U.K. Madawala  

Design and Analysis of Voltage Source Inverter for Active Compensators to Compensate Unbalanced and Non-linear Loads ........................................................................................................ 649  
Mahesh K. Mishra, K. Karthikeyan  

Modified PWM Schemes for Cyclo-inverters ..................................................................................................................... 655  
Vineeta Agarwal, Anupam Kumar, Rhythm Singh, T.J. Robin  

A New Configuration for Multilevel Converters With Diode Clamped Topology .......................................................... 661  
A. Nami, F. Zare, G. Ledwich, A. Ghosh, F. Blaabjerg  

An Improved McMurry Snubber for Three-level NPC IGBT Converter ........................................................................... 666  
Tian-yuan Tan, Ke Jiang, Qi-rong Jiang, Gang Li, Yu-xiang Lai  

Wavelet Based MOSFET Switching Loss Analysis ......................................................................................................... 672  
Rajineesh Kumar, Karunesh K. Gupta, H.V. Manjunath  

Locational Impacts of Slack Bus on Locational Marginal Price ....................................................................................... 677  
Seon Gu Kim  

Study on Value of Lost Load in China Based on Complete Benefit Analysis ............................................................... 682  
He Yongxiu, Gong Liping, Cai Qi  

Residential Load Forecast in China ..................................................................................................................................... 686  
He Yongxiu, Jiao Yanyan, Li Yan  

A Computational Tool for Dispatching Units in Pool-Based Electricity Markets ........................................................ 692  
M. Oloomi-Buygi, Ali Karimpour, Naser Pariz
# Table of Contents

Electricity Price Forecasting by Clustering-LSSVM ................................................................. 697
Li Xie, Hua Zheng, Lizi Zhang

Sensitivity Analysis on Long-term Power Demand by Grey System ........................................... 703
Li Xie, Hua Zheng, Li-zi Zhang

Research of Competition Manners Hydropower Units Should Take to Avoid Risks When Joining
Electricity Market ....................................................................................................................... 708
Y.L. Wang, J. Sun

Economic Evaluation and Risk Measurement for Generation Investment Based on Interval Numbers ............................... 714
Feng Yi, Tian Kuo, Xiao Lin, Zeng Ming

Risk Evaluation and Avoidance of Electric Customers in China ........................................................................ 719
Zeng Ming, Feng Yi, Tian Kuo

An Overview and Verification of Electricity Price Forecasting Models ............................................. 724
Hamed Valizadeh Haghi, S.M. Moghaddas Tafreshi

Grey Incidence Theory based Credit Discrminent In the Transaction of Power Energy .................. 730
H. Zhou, Y. Wang, W. Wang, T. Li, H. Yang

Impacts of Distributed Generation on System Reliability in Competitive Electricity Markets ............... 735
C.H. Ng, T.T. Lie, L. Goel

Dynamic Rescheduling Model for Congestion Management with Real Power Transaction ............... 741
N. Kamaraj, S. Venkatesan

An Operable Bidding Mode for Generation-side Electricity Market ............................................... 747
Jie Tang, Yongjun Zhang, Zexiang Cai, Tao Yu

Discussion on Electromagnetic Environment of 1000 kV AC Overhead Transmission Lines in China.......... 752
Daochun Huang, Jiangjun Ruan

A New Transmission Planning Approach Based on Technical and Economic Integration Assessment .......... 758
Qiuxia Yu, Jianbo Guo, Xianzhong Duan

Study on Interval-Based Economic Evaluation Methods for Power Construction Projects ................ 763
Xiao Jun, Cui Yan-yan, He Li-wei

Study on Eliminating Electromagnetic Loop In a Bulk Power System ........................................... 769
Weiwei Zhao, Jianhua Zhang, Jingfu Shang, Sheng Li

Normal Boundary Intersection for Generating Pareto Set in Distributed Generation Planning .......... 773
Ali Zangeneh, Shahram Jadid

The Role of Carbon Capture and Storage and Renewable Energy for CO 2 Mitigation in the Indonesian
Power Sector ................................................................................................................................ 779
C.O.P. Marpaung, A. Soebagio, R.M. Shrestha

Fuzzy Security Assessment of Entropy-Weight Coefficient Method Applied in Electric Power Information Systems .......................................................................................................................... 784
Xiao-rong Cheng, Mei Li, Hui-lan Zhao

Substation Reliability in a Restructured Power System ........................................................................ 788
Ashok Kumar Mehta, Dipak Ray, Kesab Bhattacharya

ANN Based Dynamic Voltage Security Assessment for a Practical Power System ............................ 794
Jingfu Shang, Jianhua Zhang, Weiwei Zhao, Jun Liu

Decentralized Stabilizer Design for Model- Uncertain Large Interconnected Power Systems Based on
WAMS ............................................................................................................................................ 799
Chun-xia Dou, Shi-jiu Jin, Zhi-qian Bo, Qing-quan Jia, Hui Xue
# Table of Contents

An On-line Transient Stability Emergency Control Strategy Based on PMU Forecasted Trajectory .................................................. 807
Chunyan Li, Changhong Deng, Yuanzhang Sun, Xiangyi Chen

Voltage Analysis of High Resistance Earthed Fault in Non-solidly Grounded Systems ......................................................... 813
X.H. Zhang, Z.C. Pan, B.Y. Xu, H.X. Ha

A Corrective Load Shedding Control Scheme to Prevent Voltage Collapse ........................................................................ 817
Guanglin Cai, Yongjun Zhang, Zexiang Cai, Tao Yu

 Interruption Cost Evaluation for Distribution System Reliability Using Analytical and Statistical Technique ........................................ 822
Wang Suifeng, Ren Qian, Zhang Yongjun

Optimum Power Supply Solution for the 2008 Olympic International Broadcast Centre .................................................. 827
Min Zhang, Ye Zhang, Z.Q. Bo, Xinzhou Dong, B.R.J. Caunce, A. Klimek

Dynamic Event Analysis using Synchronized PMUs via 220 V Wall Outlets ........................................................................ 832
Issarachai Ngamroo, Panlert Lappananakul, Nitus Voraphonpiput, Sanchai Dechanaprapitha, Yasunori Mitani,
Jareerat Sakurat

Design of Optimal Fuzzy Logic-based PID Controller using Multiple Tabu Search Algorithm for AGC including SMES Units ................................................................. 838
Saravuth Pothiya, Issarachai Ngamroo, Waree Kongprawechnon

A New RCTL Algorithm Based on Shortest Paths .................................................. 844
Wei Zhang, Z.C. Pan

A Dynamic State Estimation Method with PMU and SCADA Measurement for Power Systems .................................................. 848
Hui Xue, Qing-quan Jia, Ning Wang, Zhi-qian Bo, Hai-tang Wang, Hong-xia Ma

Periodic Solutions of Stiff Systems Using the Limit Cycle Method and an Implicit Integration Technique ................................ 854
L. Contreras-Aguilar, N. Garcia

Further Researches on PSS Part I. PR-graph and Analysis-based Design .............................................................................. 860
H. Chen, Y. Min, Z.Z. Guo, H. Bai

Further Researches on PSS Part II. Robustness Test and Time-domain Simulation .................................................. 866
H. Chen, Y. Min, Z.Z. Guo, H. Bai

Study on Dominant Path of Power Grid under a Given Operation Mode Part II: Proof in DC Power Flow Systems ................. 872
Kang Chang, Xueshan Han

Transient Stability Emergency Control Based on Hybrid Systems Modeling .................................................. 877
Xiaodong Chu, Yutian Liu

Retuning Control Parameters based on Damping Assessment.............................................................................. 883
R.Y. Chen, Y. Zhang, Q. Zhong, L. Guo

Online Coordinated control of Adaptive-Network-based Fuzzy Power System Stabilizers and HVDC Modulation Controller ................................................................. 889
R.Y. Chen, Y. Zhang, M. Wei, L. Guo

Power System Probabilistic Fault Calculation Based on Multi-Operating Conditions .................................................. 893
Jinlei Hu, Tao Zhang, Huafan Xie

A Control Strategy for AGC System over Communication Network .............................................................................. 899
J.H. Zhang, G.L. Hou, J.H. Hao, Y. Wang

A feasibility study of excitation system parameters identification based on measured perturbation .................................. 904
Shen Feng, He Ren-mu

The Power System Load Modeling Based on Recurrent RBF Neural Network .................................................. 910
Wang Zhi-Qiang, Chen Xing-Qiong, Deng Chang-hong, Pan Zhang-da, Dong Chao
Table of Contents

Pulse Propagation along Multi Wire Electric Fences ................................................................. 916
D.J. Thrimawithana, U.K. Madawala

A Semi-Empirical approach to determine the effective minimum current pulse width (T) for an operating Silicon chip. ................................................................. 922
Bidyut K. Bhattacharyya, Alex Levin, Gang Huo

Blackout Prevention: Anatomy of the Blackout in Europe ......................................................... 928
Xiangyi Chen, Changhong Deng, Yuming Chen, Chunyan Li

Voltage Sag Assessment and Installation of the Sag Compensator for HANARO ................................ 933
Hyung-Kyoo Kim, Hoan-Sung Jung

Analysis of the Blackout in Europe on November 4, 2006 ......................................................... 939
Chunyan Li, Yuanzhang Sun, Xiangyi Chen

Optimal Reserved Water of Pumped Storage Power Station for Black-Start ................................ 945
Chunyi Wang, Yutian Liu, Baoling He, Xizhao Qiu, Hong Mu, Wenjun Zhou, Gang Xu

Islanding Cutset Searching Approach Based on Dispatching Area ............................................ 950
Yuanqi Liu, Yutian Liu

A Simulation Method of Grid-connected Wind Farm on Transient Stability ................................. 955
Xiaoning Han, Qiaohong Lei, Yan Shi, Xiaogeng Han

Optimal Sizing of a Stand-alone Hybrid Power System via Particle Swarm Optimization (PSO) .... 960
S.M. Moghaddas Tafreshi, S.M. Hakimi

Overview of the Researches on Distributed Generation and Microgrid ...................................... 966
Xialing Xu, Xiaoming Zha

Impact on Reliability in Active Networks with Distributed Generation Interconnection ................. 972
Ding Lei, Pan Zhen-cun, Wang Bin

The Optimal Dispatching Research of The Wind-hydro Hybrid System ................................... 977
Wenxia Pan, Yongwei Fan, Nanying He

Reactive Power Control of Autonomous Wind-Diesel Hybrid Power Systems Using ANN ........ 982
R.C. Bansal, T.S. Bhatti, V. Kumar

Nonlinear Decouple Controller Design for Wind Power Generator under Ride-Through ............... 988
Liang Zhishan, Xie Zhengxian, Zhang Huaguang

Sizing Pumped Storage in an ABT Regime .................................................................................. 994
T. Geetha, V. Jayashankar

Aspects of Sizing Battery Energy Storage Capacity for a Unified Power Flow Control Scheme ........ 1000
Z.X. Tan, S.S. Choi

Energy Accounting System for Indian Electricity Distribution Sector ........................................ 1006
R.N. Lahiri, Arup Sinha, Somenath Byabortta, S. Chowdhury, S.P. Chowdhury, Y.H. Song

SiC based Buck Boost Converter ............................................................................................... 1014
Vineeta Agarwal, Anupam Kumar

Proportional-Resonant Current Control for Three-Phase Three-Level Rectifier ......................... 1018
Fangrui Liu, Ali I. Maswood, Yong Kang, Yu Zhang, Shanxiu Duan

Control Techniques for Multilevel Voltage Source Inverters .................................................. 1023
V. Kumar Chinnaiyan, Jovitha Jerome, J. Karppagam, T. Suresh

Operation and Analysis of a Series loaded Resonant Converter Based Power Supply ................ 1029
R.B. Jadeja, Smita Kanitkar, Anurag Shyam

Application of H∞ Control Theory in Active Power Filter ....................................................... 1033
Riyue Liu, Xiaodong Wu, Yu Zhang
Table of Contents

Isolated Multi-level Inverter Using 3-Phase Transformers ................................................................. 1037
   Song Sung-Geun, Yu Tao, Park Sung-Jun, Lim Joong-Min, Cheang Eui-Heang, Jung Kwen-Sung, Moon Chae-Joo

The SVPWM fast Algorithm for Three-Phase Inverters ............................................................................ 1043
   Xiaoling Wen, Xianggen Yin

$H_\infty$ Control Theory Apply to New Type Arc-suppression Coil System .............................................. 1048
   Yilong QU, Wipgu Tan, Yihan Yang

Characterization of Dielectric and Magnetic Properties of Mn-Zn Ferrites by Using Two Capacitors Made up of Solid Cylindrical Samples with Different Dimensions ...................................................... 1053
   Daming Zhang, Ruiying Huang

Repetitive Learning Control with Fuzzy Tuning for Three-Phase Shunt Active Power Filters in Stationary d-q Frame .................................................................................................................... 1059
   Tzann-Shin Lee, Kune-Shiang Tseng

Harmonic Detection using Fuzzy LMS Algorithm for Active Poser Filter .............................................. 1065
   Yilong QU, Wipgu Tan, Yihan Yang, Yimai Dong

Stray Current Automatic Monitoring System and Intelligent Obviating Current Device in Metro ........ 1070
   Mu Longhua, Zhouwei

The Digital Multi-functional Arc Welding/Cutting Inverter Based on ZVS .............................................. 1075
   G.R. Zhu, Z. Liu, X. Li, S.X. Duan, Y. Kang, J. Chen

Research on a Novel Hybrid Cascade Multilevel Converter .................................................................... 1081
   Yun Xu, Yumping Zou

Research on a Novel ZVT-Buck Inverter Based on Sliding Mode Control ............................................. 1086
   J.H. Chen, Y.X. Xie, T. Li

Oil-Immersed Transformer Temperature Monitoring by ANSI/IEEE C57.91 Model ................................ 1092
   P. Maleewat, S. Tadsuan, V. Saelee, C. Chompoo-invai

Design considerations of High Speed Axial Flux permanent magnet Generator with Coreless Stator .......... 1097
   M. Sadeghierad, H. Lesani, H. Monsef, A. Darabi

A Three Stage Stator Switching Scheme For MWh and MVARh Saving in Induction Motors ............... 1103
   R. Karthigaivel, N. Kumaresan, M. Subbiah

Fault Classification and Location of Power Transmission Lines Using Artificial Neural Network .......... 1109
   M. Tarafdar Hagh, K. Razi, H. Taghizadeh

Avoiding Under-reaching in Twin circuit Lines without Residual Current input from the Parallel Line .......... 1115
   R.N. Mukerjee, Mohd Faris Bin Abdullah, K.K. Tan, Perumal Nallagovnden

A New Principle of Fault Line Selection in Non-solidly Earthed Network Based on Direction Traveling Wave ......................................................................................................................... 1121
   Fan Zhang, Zhencun Pan, Linlin Ma, Gang Zheng, Qinglei Zhang

Fault Location using Wavelet Energy Spectrum Analysis of Traveling Waves ....................................... 1126
   Zhang Xiaoli, Zeng Xiangjun, Lei Li, S.S. Choi, Wang Yuanjuan

Design and Implementation of an Adaptive High Impedance Fault Relay ............................................. 1131
   N. Ramezani, M. Sarlak, S.M. Shahrata, D. Arab Khabori

Identification of fault types for a three-bus transmission network using Discrete Wavelet Transform and Probabilistic Neural Networks ........................................................................... 1137
   T. Patcharoen, A. Ngaopitakkul, A. Kunakorn

Study of the Phase Shifting Effects of Transformer on Fault Analysis Model of Power System ............ 1143
   A.N. Wang, Q. Chen, Z.P. Zhou
# Table of Contents

Grounding Faulty Line Selection in Non-Solidly Grounded Systems Using Transient Energy .................................................. 1147  
X.H. Zhang, H.X. Ha, Z.C. Pan, B.Y. Xu

A Novel Fault Location for Transmission Line by the Combination of Particle Swarm Optimization and Least Squares Method ................................................................. 1151  
Yansheng Liang, Gang Wang, Haifeng Li

A MAS-Based Protection Coordination System for Wide Area Network .................................................................................. 1156  
Zhenyu Chen, Gang Wang, Haifeng Li

Classification of Strokes and Identification of stroke Location from the Measured Tower Base Currents of LPS to Indian Satellite Launch Pad-I ............................................................ 1161  
Vishwanath Hegde, Udaya Kumar

A Critical Overview on Zero sequence component compensation in Distorted and Unbalanced Three-Phase Four-Wire Systems ........................................................................... 1167  
M. Tavakoli Bina, E. Pasha Javid

A Repetitive Learning boost converter control of Neutral Line Active Power Filter Based on FPGA and DSP ............................................................................................................. 1173  
Zha Xiaoming, Shi Feng, Chen Yunping

Comparision of Power loss of Three-phase Induction Motor of Four Techniques with PWM Inverter Supply .................................................................................................................. 1179  
S. Tadsuan, b. Suechoey, V. Saelee, C. Chompoon-inwai

An Analysis of Iron loss Supplied by Sinusoidal, Square Wave, Bipolar PWM Inverter and Unipolar PWM Inverter ................................................................................................. 1185  
P. Khluabwannarat, C. Thammarat, S. Tadsuan, S. Bunjongjit

Estimation of Iron losses of M3 and M5 Magnetic core Material with Three Phase PWM Inverter Supply ........................................... 1191  
S. Tadsuan

The Result Analysis of the Electrical Power and Temperature of 3-Phase Induction Motor Supplied by the PWM Inverter ........................................................................................................ 1197  
P. Khluabwannarat, C. Thammarat, S. Tadsuan, B. Suechoey

Research on the Identification of the Short-circuit Fault in Power System Based on the Information of Electronic Transducer .......................................................................................... 1203  
L.J. Jin, Z. Yuan, Y.G. Guan, X.G. Zheng

Chaos Based Multi-agent Coordination with sharing resources for Secondary Voltage Control in Power-system Voltage Stability .............................................................................. 1207  
Xiaolei Du, Tiecheng Lu, Liang Xu, Tie Liu

A Graphic User Interface-based Program for Voltage Sag- and Flicker-Source Detection ................................................................. 1213  
Thavatchai Tayjasanant

A Simple Control Strategy For Unified Power Quality Conditioner Using Current Source Inverter .................................................. 1219  
K. Vadirkajacharya, Pramod Agarwal, H.O. Gupta

Stochastic Assessment of Voltage Sags In Distribution Networks ............................................................................................................. 1224  
Yaser Raisee Gahrooyi, M.A. Golkar

Survey of Interharmonics in Indian Power System Network .................................................................................................................. 1230  
B.E. Kushare, A.A. Ghatol, M.S. Aphale

Application of Adaptive Notch Filter for Harmonics Currents Estimation ...................................................................................... 1236  
M. Tarek, S. Mekhilef, N.A. Rahim

Fuzzy Logic Based SVC for Reactive Power Compensation and Power Factor Correction .............................................................. 1241  
S. Khanmohammadi, M. Tarafdar Hagh, M. Abapour
# Table of Contents

Application of EMD and SVD in Fault Identification ........................................... 1247
Zhihui Zhu, Yunlian Sun

Analysis of Induction Machines under Rotor End-ring Faults .......................... 1251
Hongzhong Ma, Jingsong Song, Riuming Fang, Fen Chen

Applicability of semiconductor gas sensor for measurement of dissolved hydrogen gas in oil ......................................................... 1257
Jong-Ho Sun, Sang-Bo Han, Dong-Sik Kang, Kwang-Hwa Kim

Design Margin for Short Circuit Withstand Capability in Large Power Transformers .................. 1262
S. Gopalakrishna, Kishore Kumar, Boby George, V. Jayashankar

Study on Frequency Spectra of Partial Discharge according to Defects and Couplers 1268
Kwang-Hwa Kim, Sang-Hwa Yi, Jong-Ho Sun

Statistical Analysis of Power Transformer Component Life Time Data .............. 1273
Rogier Jongen, Edward Gudski, Johan Smit, Peter Morshuis, Anton Janssen

Resolutions of Digital Recorder and Evaluated Impact Voltage Waveform Parameters 1278
S. Sato, M. Sasaki

Simulation Model of Lightning Stroke to a Transmission Line Considering the Leader Propagation Randomicity ......................................................... 1282
Zhenglong Jiang, Fuchang Lin, Ling Dai, Hua Li, Yongxia Han, Ren Kang, Hui Yu, Huisheng Ye

The Design of Insulation Online Monitoring System based on Bluetooth Technology and IEEE1451.5 .............................................................. 1287
Hailong Zhang, Genzhi Guan, Xiaoyan Zang

The study of disc monopole antenna for partial discharge measurement .................. 1292
Prawit Petchphung, Monthon Leelajindakrainerk, Norasage Pattanadech, Peerawut Yuthagowith, Kraison Aunchaleevaranpan

Improvement of Standard Suspension Type Insulator by The Semiconducting glaze for Pollution condition ................................................................. 1297
U. Samanmit, S. Chusanapiput, S. Phoomvuthisarn, A. Vassanasong, A. Pinjom, N. Pattanadech, P. Yuthagowit, N. Boonsaner

Comparative Study and Analysis of DGA Methods for Mineral Oil Using Fuzzy Logic .......................... 1301
N.A. Muhamad, B.T. Phung, T.R. Blackburn

Research on PD Sensor Design for Stator Winding Diagnosis of Turbine Generators ......................................................... 1307
Sang-Hwa Yi, Don-Ha Hwang, Dong-Sik Kang

Classification of Partial Discharge using PCA and SOM ........................................ 1311
K.X. Lai, B.T. Phung, T.R. Blackburn, N.A. Muhamad

Research on Shielding Overvoltage of Single-core Cable ........................................ 1317
H.Q. Niu, X.B. Wang, Y.X. Shi, Y. Zhang

A Hybrid Approach of Ultra-short Term Multi-node Load Forecasting ............... 1321
Li Han, Xueshan Han, Jian Hua, Yan Geng

Power System On-line Transient Stability Assessment Based on Relevance Vector Learning Mechansim ......................................................... 1327
Du Zhi-gang, Niu Lin, Zhao Jian-guo

An Approach to Compute Stable Solution Based on Stability Constraints in Power Systems ......................................................... 1332
Renjun Zhou, Xuehua Deng, Xiaojiao Tong, Chenhao Zhang

Line Measurement of Positive, Negative and Zero Sequence Parameters of Transmission lines with Mutual Inductance ............................................. 1337
Xiangyi Chen, Cheng Tang, Yunping Chen, Chunyan Li

Optimal Economic Dispatch for Power Generation Using Artificial Neural Network ......................................................... 1343
S. Panta, S. Premrudeepeechacharn, S. Nuchprayoon, C. Dechthummarong, S. Janjornmanit, S. Yachiangkam
# Table of Contents

Optimum Allocation Of Generation For Maximum Loadability Limit Of Power System Using Multiagent Based Particle Swarm Optimization (MAPSO) ................................................................. 1349
   A. Shunmugalatha, Dr. S. Mary Raja Slochanal

Optimal Power Purchase Planning of Hainan Power Grid Company ................................................. 1355
   Yongjun Zhang, Wengen Yuan, Bangfeng Li, Minchuan Liao

The Management and Evaluating System on Test Data for High Voltage Electric Equipments ................. 1360
   Tie Liu, Tiecheng Lu, Xiaolei Du, Lixin Kuang, Xianguang Zha

Multi-Agent Architecture of Energy Management System Based on IEC 61970 CIM ............................... 1366
   Song Wei, Wang Xiangnan, Cao Houji, Pan Guowei

Application of Support Vector Regression Model Based on Phase Space Reconstruction to Power System Wide-area Stability Prediction ........................................................................... 1371
   Du Zhi-gang, Niu Lin, Zhao Jian-guo

Improved SOM Based Method for Short Term Load Forecast of Iran Power Network .............................. 1377
   S.M. Moghaddas Tafreshi, Mahdi Farhadi

Multiobjective Particle Swarm for Environmental/Economic Dispatch Problem ..................................... 1385
   M.A. Abido

Online Intelligent Control of a Boiler-Turbine Unit using Tabu-Search Algorithm .................................. 1391
   M. Shakil, M.A. Abido

PSS based on Optimal Fuzzy PID with Particle Swarm Optimization ...................................................... 1396
   Ermanu A. Hakim, Adi Suprijanto, P. Maurdi Heri

The Information System for Economic Operation of Transformer Based on ASP ............................... 1401
   Wang Ying, Liu Hui-chao

Automatic Generation of Power-flow Diagrams for Transmission Networks ......................................... 1405
   Song Shiuy, He Guangyu, Xu Pengliang

Electricity Consumption and Automatic Billing through Power Line .................................................... 1411
   G. Thavasi Raja, T.D. Sudhakar

An Integrated On-line System for Experimental Data Analysis to Electric Machines Laboratory ............. 1416
   Y.C. Chin, G.W. Chang
