2008 2nd International Conference on Emerging Security Information, Systems and Technologies

(SECURWARE 2008)

Cap Esterel, France
25 – 31 August 2008
The Second International Conference on Emerging Security Information, Systems and Technologies

SECURWARE 2008

Table of Contents

Preface
Committees

SECURWARE 1: Frameworks, Architectures and Protocols I
Enhancing Trusted Platform Modules with Hardware-Based Virtualization Techniques ................................................................. 1
  Frederic Stumpf and Claudia Eckert
A Secure Task Delegation Model for Workflows ................................................................. 10
  Khaled Gaaloul, Andreas Schaad, Ulrich Flegel, and François Charoy
Formal Modeling of Authentication in SIP Registration ......................................................... 16
  Anders Moen Hagalisletto and Lars Strand
Controlling Access to Location-Based Services in Vehicular Mobile Pervasive Environments ........................................................................ 22
  Sameerchand Pudaruth, Nevin Vunka Jungum, Soulakshme D. Ghurbhurrun,
  and Leckraj Nagowah

SECURWARE 2: Frameworks, Architectures and Protocols II
A New Approach for Secure and Portable OS ........................................................................... 28
  H. Rezaei Ghaleh and M. A. Doustari
Distack – A Framework for Anomaly-Based Large-Scale Attack Detection .......................... 34
  Thomas Gamer, Christoph P. Mayer, and Martina Zitterbart
SECURWARE 3: Frameworks, Architectures and Protocols III

Security Patterns for Capturing Encryption-Based Access Control to Sensor Data ......................................................... 62
Angel Cuevas, Paul El Khoury, Laurent Gomez, and Annett Laube

Security Policy Management for Peer Group Meetings ................................................................. 68
Fuwen Liu and Hartmut Koenig

FEEPVR: First End-to-End Protocol to Secure Ad Hoc Networks with Variable Ranges against Wormhole Attacks ................................................................. 74
Sandhya Khurana and Neelima Gupta

Proving Trust Locally ................................................................. 80
Anders Moen Hagalisletto

A Security Framework for Input Validation ................................................................. 88
Rafael Bosse Brinhosa, Carlos Becker Westphall, and Carla Merkle Westphall

SECURWARE 4: System Security

Defending E-Banking Services: Antiphishing Approach ................................................................. 93
Antonio San Martino and Xavier Perramon

Preventing Insider Information Leakage for Enterprises ................................................................. 99
Imad M. Abbadi and Muntaha Alawneh

Analysis of the Impact of Intensive Attacks on the Self-Similarity Degree of the Network Traffic ................................................................. 107
Pedro R. M. Inácio, Mário M. Freire, Manuela Pereira, and Paulo P. Monteiro

Scalable Detection of SIP Fuzzing Attacks ................................................................. 114
Eric Y. Chen and Mitsutaka Itoh

Authentication Mechanisms for Mobile Ad-Hoc Networks and Resistance to Sybil Attack ................................................................. 120
Sarosh Hashmi and John Brooke

SECURWARE 5: Malware & Security

The Automatic Discovery, Identification and Measurement of Botnets ................................................................. 127
Ian Castle and Eimear Buckley

A Protection Scheme against the Attacks Deployed by Hiding the Violation of the Same Origin Policy ................................................................. 133
Masaru Takesue
Email Worm Mitigation by Controlling the Name Server Response Rate .................................................139

Nikolaos Chatzis and Enric Pujol

Anti-counterfeiting with a Random Pattern .................................................................146

Cheun Ngen Chong, Dan Jiang, Jiaagang Zhang, and Long Guo

Efficient Anomaly Detection System for Mobile Handsets ......................................................154

Yuka Ikebe, Takehiro Nakayama, Masaji Katagiri, Satoshi Kawasaki, Hirotake Abe, Takahiro Shinagawa, and Kazuhiko Kato

SECUWARE 6: Ecosystem Security and Trust

Providing Secure Access to Unsecure Web Services ..............................................................161

V. F. Pais and V. Stancalie

Towards Decentralised Security Policies for e-Health Collaborations ........................................165

Oluwafemi Ajayi, Richard Sinnott, and Anthony Stell

Rating Agencies Interoperation for Peer-to-Peer Online Transactions ....................................173

Mihaela Ion, Hristo Koshutanski, Volker Hoyer, and Luigi Telesca

Optimal Trust Network Analysis with Subjective Logic ...........................................................179

Audun Josang and Touhid Bhuiyan

From Monitoring Templates to Security Monitoring and Threat Detection ..............................185

Nuno Amálio and George Spanoudakis

SECUWARE 7: Cryptography

A Body-Centered Cubic Method for Key Agreement in Dynamic Mobile Ad Hoc Networks .................................................................193

Ioannis G. Askoxylakis, Damien Sauveron, Konstantinos Markantonakis, Theodore Tryfonas, and Apostolos Traganitis

Family of Parameterized Hash Algorithms ..............................................................................203

P. Rodwald and J. Stoklosa

Public Key Cryptography: A Dynamical Systems Perspective ..................................................209

Roland Schmitz

A Related-Key Attack on TREYFER .........................................................................................213

Aleksandar Kircanski and Amr M. Youssef

SECUWARE 8: Information Security I

Security and Adoption of Internet Payment ..............................................................................218

Jean-Michel Sahut

Appraisal of the Effectiveness and Efficiency of an Information Security Management System Based on ISO 27001 .................................................................224

Wolfgang Bohemer

Generic and Complete Three-Level Identity Management Model ...........................................232

M. Dąbrowski and P. Pacyna

A Novel Approach against DoS Attacks in WiMAX Authentication Using Visual Cryptography ..............................................................................238

Ayesha Altaf, Rabia Sirhindi, and Attiq Ahmed
A New Anti-phishing Method in OpenID ...............................................................243
   HwanJin Lee, InKyung Jeun, Kilsoo Chun, and Junghwan Song

SECURWARE 9: Information Security II

Toward the Engineering of Security of Information Systems (ESIS): UML
and the IS Confidentiality .....................................................................................248
   Wilson Goudalo and Dominique Seret

Designing an Undergraduate Software Security Course ......................................257
   Cynthia Y. Lester and Frank Jamerson

High-Speed Private Information Retrieval Computation on GPU ........................263
   Carlos Aguilar Melchor, Benoit Crespin, Philippe Gaborit, Vincent Jolivet,
   and Pierre Rousseau

Vulnerability Dependencies in Antivirus Software .................................................273
   Kreetta Askola, Rauli Puuperä, Pekka Pietikäinen, Juhani Eronen,
   Marko Laakso, Kimmo Halunen, and Juha Röning

SECURWARE 10: Information Security III

Security Governance for Enterprise VoIP Communication .....................................279
   Rainer Falk and Steffen Fries

ToLeRating UR-STD .............................................................................................287
   Jan Feyereisl and Uwe Aickelin

Collaborative Approach to Automatic Classification of Heterogeneous
Information Security .............................................................................................294
   Fatiha Benali, Stéphane Ubéda, and Véronique Legrand

Infusing Information Assurance into an Undergraduate CS Curriculum ...............300
   Cynthia Y. Lester, Hira Narang, and Chung-Han Chen

SECURWARE 11: Profiling Data Mining

On the Portability of Trained Machine Learning Classifiers for Early Application
Identification .........................................................................................................306
   Giacomo Verticale

Activity- and Inactivity-Based Approaches to Analyze an Assisted Living
Environment ........................................................................................................311
   Martin Floeck and Lothar Litz

Analysis of Computer Infection Risk Factors Based on Customer Network
Usage ....................................................................................................................317
   Yannick Carlinet, Ludovic Mé, Hervé Debar, and Yvon Gourhant
# DEPEND I

**Design-Time Learning for Operational Planning Improvement** ................................................................. 326
*Daniel J. Martinez, Juan M. Marin, Jorge Bernal, Manuel Gil, and Antonio F. Gomez-Skarmeta*

**Molecular Approach Paves the Way towards High Resilience for Large Mission-Critical Information Systems** .................................................................................................................. 332
*André Cotton, Maurice Israël, and Julien Borgel*

**Heuristics to Perform Molecular Decomposition of Large Mission-Critical Information Systems** ................................................................. 338
*Maurice Israel, Julien Borgel, and Andre Cotton*

**Generation of Diagnostic Plans for Large ICT Systems** ........................................................................... 344
*Marco D. Aime and Andrea Atzeni*

# DEPEND II

**Dependability Analysis of Information Systems with Hierarchical Reconfiguration of Services** ................................................................. 350
*Dariusz Caban and Wojciech Zamojski*

**Hierarchical Approach to Dependability Analysis of Information Systems by Modeling and Simulation** .................................................................................................................. 356
*Katarzyna Michalska and Tomasz Walkowiak*

**Towards the Definition of a Web Service Based Management Framework** ............................................. 362
*Juan Manuel Marín Pérez, Jorge Bernal Bernabé, Daniel J. Martínez Manzano, Gregorio Martínez Pérez, and Antonio F. Gómez Skarmeta*

**Dependability and Security Metrics in Controlling Infrastructure** .............................................................. 368
*Imre Kocsis, György Csertán, Péter László Pásztor, and András Pataricza*

# DEPEND III

**Advanced Rule-Based Techniques in Mission Critical Systems** ................................................................. 375
*Maite Avelino and Francisco de la Torre*

**Fast Algorithms for Local Inconsistency Detection in Firewall ACL Updates** ........................................... 381
*S. Pozo, R. Ceballos, R. M. Gasca, and A. J. Varela-Vaca*

**Event-Driven Architecture for Intrusion Detection Systems Based on Patterns** .......................................... 391
*Jesús J. Martinez Molina, Miguel A. Hernández Ruíz, Manuel Gil Pérez, Gregorio Martinez Pérez, and Antonio F. Gómez Skarmeta*

**Agent Based Approach to Events Monitoring in Complex Information Systems** ........................................ 397
*Marek Woda and Tomasz Walkowiak*
DEPEND IV

A Synchronization Attack and Defense in Energy-Efficient Listen-Sleep Slotted MAC Protocols .................................................................403
   Xiaoming Lu, Matt Spear, Karl Levitt, Norman S. Matloff, and S. Felix Wu

On System Security Metrics and the Definition Approaches .................................................................412
   Artur Hecker

Policy-Driven System Configuration for Dependability ........................................................................420
   Marco D. Aime, Paolo C. Pomi, and Marco Vallini

A Dependability Case Approach to the Assessment of IP Networks .........................................................426
   Ilkka Norros, Pirkko Kuusela, and Pekka Savola

Author Index
