Materials Innovations for Next-Generation Nuclear Energy

November 26-30, 2007
Boston, Massachusetts, USA
# TABLE OF CONTENTS

From Bytes to Ingots: Expedient Design of Structural Materials for Advanced Nuclear Energy Systems ................................................................. 1  
Steven Zinkle, Ron Klueh, Phil Maziasz, Jeremy Busby, David Hoelzer, John Vitek, Roger Stoller, Yuri Osetsky

Existence of a Critical Temperature for Corrosion of Alloy 617 in He-CO-CO2 Environment .................................................................................. 28  
Deepak Kumar, Gary Was

Microstructural Characterization of the Radiation Effects in ZrC, a Potential Material for Next Generation Nuclear Plants ................................. 45  
Gianguido Baldinozzi, Dominique Gosset, David Simeone, Michael Dollé, Lionel Thomé, Suzy Surblé

SiC, TiC and ZrC Nanostructured Ceramics: Elaboration and Potentialities for Nuclear Applications ................................................................. 50  
Yann Leconte, A. Audren, N. Herlin-Boine, C. Reynaud

Characterization of Point Defect Generation, Migration and Coalescence in Irradiated SiC by Atomistic Simulation ........................................ 66  
David Farrell, W. Kam Liu, N. Bernstein

On Modeling the Evolution of Radiation Damage in Silicon Carbide ................................................................................................. 79  
William Weber, Fei gao, Ram Devanathan, Yanwen Zhang, Weilin Jiang, Haiyan Xiao, In-tae Bae, Zhexuejun Bao

Radiation Induced Structural Changes in Normal Spinel .................................................................................................................. 106  
Gianguido Baldinozzi, Dominique Gosset, David Simeone, Leo Mazevolles, Lionel Thomé

Influence of Phase Stability on Radiation Damage Properties: Plutonium-Gallium Alloys ................................................................. 113  
Steve Valone, Michael I. Buskes, Blas Uberuaga, Richard L. Martin, Alison Kubista, Wilhelm G. Wolfer

Defect Structure and Stability in Uranium and Zirconium Nitrides ................................................................................................. 125  

Insights into Radiation Tolerance of Ceramics from Large Scale Molecular Dynamics Simulations .................................................................................. 149  
Ram Devanathan, William J. Weber

Oxidation Behavior of Zr-Nb Alloys at 973-1273 K in Air .................................................................................................................. 164  
Tatsuki Arima, K. Miyata, K. Idenitou, Y. Imagaki

Study on Effects of Heavy Ion Irradiation on CeO2 by Using Synchrotron Radiation X-Ray Absorption Spectroscopy -as a Simulation Study for Radiation Damage in High-Burnup Light Water Reactor Fuels- .................................................................................. 179  
Akihiro Iwase, Daiji Matsumura, Yasuo Nishihata, Jun’ichi Matsu, Norito Ishikawa, Takeshi Sonoda, Motoyazu Kimishita, Akihiro Iwase

Study on Copper Precipitation under Electron Irradiation in FeCu Model Alloys by Using Vickers Hardness Measurements .......................... 184  
Shou Nakagawa, Fuminorhu Hori, Hiroaka Ohno, Norito Ishikawa, Ryuichiro Oshima, Michiharu Kitagawa, and Akihiro Iwase

Modeling and Simulation of Thermophysical Properties of Minor Actinides-Containing Oxide Fuels ........................................................................ 190  
Masahito Katayama, Jun Adachi, Ken Kurosaki, Masayoshi Uno, Shuhei Miwa, Masahiko Oraka, Kenya Tanaka, Shinsuke Yamanaka
