ISBN: 978-1-60560-666-8

Some format issues inherent in the e-media version may also appear in this print version.
# TABLE OF CONTENTS

**Volume 1**

Reliability Evaluation of Complex Distribution System Based on GO Method .......................... 1
*Jingzhou Xu, Yang Li*

Research on Analysis and Measures to Lightning-caused Break Mechanism of 10 kV Insulated Aluminum Conductor ................................................................. 8
*Maocheng Wang, Yongli Lu, Hongying Zou, Xuanjun Wang*

Study of the Effect of the HVDC Ground Electrode Current on Neutral Grounding Network Equipment ........................................................................................................ 14
*Cheng Huangfu, Yuanhang Wei, Jiangjun Ruan*

Study of the Characteristics and Benefits of Power Networks Structure ............................... 20
*Shuqiao Duan*

Distribution Management System Based on Integrated Design of GIS System and SCADA System .............................................................................................................. 28
*Ruihua Ren, Fazhan Liu, Limin Lv, Bin Song, Zhichao Che*

Study of Synthetic Decision Making in Time-of-use (TOU) Pricing ........................................ 34
*Yi Su, Xiaomin Bai, Xiaoliu Shen, Chun Lin*

Research on Key Problems of Power Swing Unit in Microcomputer Distance Protection ......................................................... 39
*Hui Hou, Xianggen Yin, Dahai You, Xiaoyu Liu, Mingliang Jin, Tianqi Xu*

Power Distribution Dispatching Automation System Based on the Concept of Data Mart ......................................................................................................................... 46
*Bo Wang, Ziheng Hu, Zhiyong Zou*

A Practice of a Staggering Peak Load Management System Based on Short Message of Mobile Phone Platform ......................................................... 50
*Bo Wang, Bo Meng, Xiao-hui Zheng, Qing-rui Xie*

A Quality of Service Solution for Power Data Communication Network ................................ 53
*Lei Xu, Ruzhi Xu*

Design of the Tour-inspecting System Based on GPS and Embedded GIS ............................ 60
*Hua Jin, Junhua Qu*

Research on a Novel FCL for Three-phase Ungrounded Power Systems .............................. 64
*Wanmin Fei, Yanli Zhang, Mei Yu*

The Establishing of GIS System and Its Function in City Electric Power Supplying Management ............................................................................................................. 70
*Qiang Xu*

High-speed Mid-voltage Distribution Line Carrier Communication System ....................... 75
*Hongchun Yao, Jinghong Guo*

Study on Adaptive Three-step Current Protection ............................................................. 81
*Zhongwei Li, Weiming Tong, Shenghu Feng, Xu Cheng*

Simulation Study on Over-voltage and Over-current Due to Reclosing Operation in Substations with Cable Outlets ................................................................. 86
*Huixwen He, Junjia He*

Analysis of Reactive Power Compensation for Distribution Network .................................. 92
*Li Zhang*
Application of VLAN in Digital Interface of Electronic Transducers ............................................. 98
  Zhiyu Huang, Xiongying Duan, Jiyan Zou

A Thought About Phase-phase Distance of the Pulled Tower of the Compact Transmission Line ......................................................................................................................... 104
  MiaoCha Liu

Research on Flexible Load Management Based on a Uniform DSM Decision-making Model .................................................................................................................................................. 107
  Chen Qixin, Guo Lin, Kang Chongqing, Xia Qing

The Fault Location Method for HVDC Transmission Line ............................................................................. 114
  Yongchang Zhai, Hai Feng Zhang

Substation Voltage and Reactive Power Control Based on Hybrid Particles Swarm Optimization ............................................................................................................................................. 121
  Tao Zhang, Wenye Chen, Yonghao Zen, Zhen Ren

Application of Multivariable Grey Model in Power Transformer Gas-in-oil Prediction ........................................... 130
  Yancai Xiao, Xiaoyuan Zhang, Jiangtian Yang, Xiuhai Chen

Study of the Influence of DC Currents in the Ground on Transformers and Its Suppression Methods .................................................................................................................................................. 134
  Yancun Liu, Guihua Mei, Xiaomao Wang, Jian Zhang

Development of On-line Temperature Monitoring System for High Voltage Switchgear ............................................. 139
  Yuyu Xu, Baojun Jia, Yan Peng, Jing Bai

Discusses on the Lightning Strike and Wire Breakage of OPGW ........................................................................... 144
  Tiancang Du, Yao Zhang, Wenbo Xia

Research of IP Based Multimedia Communication System Used for Combined Anti-accident Maneuver .................................................................................................................................................. 149
  Xiande Bu, Guanyuan Zhang, Yun Gao, Jinghong Guo

Reactive Power Optimization Model Based on Multi-objective Bi-level Programming and Mixed Algorithm .................................................................................................................................................. 154
  Shufen Wang, Zhongping Wan, Heng Fan

To Eliminate the Inrush Current of Transformer by Controlling the Entering Phase ................................................................................................. 160
  Gaowa Wuyun, Po Li, Nian guo Ye, D. Liu

Applied Research About Cascaded Multilevel STATCOM Based on Least Content of Low Harmonic .................................................................................................................................................. 166
  Guoxiang Chang, Chengyuan Wang, Yinqiu Wang, Xiuling Liu, Jiakuan Xia

A Combined High Voltage Electronic Transducer Consistent with IEC Standard Digital Interface ........................................... 172
  Zhiyu Huang, Xiongying Duan, Jiyan Zou

Neural Network Fitting of Power Demand Function Based on Improved Genetic Algorithm .................................................................................................................................................. 178
  Shuxia Yang

A Novel Detection and Control Strategy of Power Quality ........................................................................... 184
  Enguo Zhu, Bing Zhao, Gongxun Yang

The Electric Power Dispatching Automation System Based on Unix/windows Associated Platform .................................................................................................................................................. 190
  Fubao Wu, Yichuan Bai, Riqiang Zhao, Guofu Xi, Yanman Li, Yeping Wang
Optimal Planning of Round-distribution Network
Xiaoshu Huang, Kun Yu, Yunlong Huang, Xiang Zheng, Xinying Chen

An Improved AVQC Method of Nine-zone Graph Principle Based on the Identification of the Regulation Unit
Yirong Su, Rijun Wang, Fubao Wu, Yongzheng Zou, Min Xie

Study on Load Classification of Power Distribution Transformer Based on Data Stream Management
Yinghui Kong, Jinsha Yuan, Tiefeng Zhang, Yulin Qi, Lei Wu

The Electric Power Demand Side Management Real Diagnosis Research of Baoding Area
Wei Sun, Yimei Si, Wen Wei

Combining Incidence Relation Preferential and Varied-weight for Mid-long Term Load Forecasting
Qiyun Cheng, Xuelian Liu

Game Analysis on Government Regulation for Transmission and Distribution Company in Electricity Market
Debin Fang, Xianjia Wang, Xiaohui Zhang

The Choice and Application of Automatic Fault Isolation for Distributed Network
Shiming Xu, Jianfeng Lu

Study on Programmable Scheme Logic in Microprocessor-based Relay Protection
Bo Yan, Mei Huang

The Test Method for the Substation Automation IEC61850 Channel
Jun Li Zhou, Qi Ming Han, Yuan Shen

High-voltage Distribution Network Planning Considering Saturated Load
Jun Ni, Xiaohui Song

Research on Incentive Interruptible Contracts in DSM
Yong Fang, Mingming Wang, Xinyu Cui

The Design of Data Structure for IED Based on IEC61850
Wei He, Chenghong Tang, Xiangwen Zhang, Songyi Zhu, Hao Yuan, Wengui Miao

The Contradiction of the IEC61850 Model and Mms Mapping and Its Solution
Wei He, Wengui Miao, Jin Li, Haibo Yu, Shuang Liu, Dan Sun

Discussion on Sensitive Factors in Economic Evaluation of Network Planning
Weihong Yang

Environment-friendly Natural Cooled Transformers with Loop-heat Pipe Radiator
Qinggan Zeng, Bing Sun

Electromagnetic Compatibility of Measuring System for Series Compensator Protection
Jiang Yu, Hongyang Zhou, Manyong Zhao, Shouyuan Wu, Ping Jing

Mid-voltage Power Line Based Communication System for Distribution Automation and the Design of Terminal Hardware
Gujing Han, Xiaogong Yin, Tao Lin

Online Monitoring of Capacitance to Ground of the Network and the Study on Calculating Method for Network Grounding Fault Resistance
Xiaoli Niu
Study on Credit Evaluation Models for Electric Power Clients and the Design of the Software System Based on Reformative Analytic Hierarchy Process Method ........................................ 296
He Wang, Shan Chen, Jian Zhou, Ming Zeng, Baozhu Li

Distribution Management Systems Based on the Standard IEC 61968 ........................................ 302
Lin Wu, Jinghu Zhao, Hongwei Du

Short-term Electricity Price Forecasting Using Grey Forecasting Model Method ........................... 308
Jing Wang, Qiaolin Ding, Jianxin Liu

Effects of Harmonic Components of Power Supply on the Dielectric Loss Measurement Based on Correlation Function Algorithm .......................................................... 315
Maohua Shan, Zhen Han, Ji Liu, Zhong Bai, Guogang Lu

A Novel Outdoor HV Automatic Reactive Compensation Equipment ........................................ 324
Yan Jing, Jin Li

The Application of Combined Optimum Grey Model in Medium and Long Term Load Forecasting ................................................................. 330
Guihong Feng, Xiang Yang, Bingyi Zhang

A Novel Fault Line Detection Method Based on Waveform Analysis ............................................ 335
Peng Mao, Jinyan Wei, Bin Chen

Applying Bp Neural Network to Forecast the Mid- and Long-term Power Load ............................ 340
Xianjia Wang, Dong Han, Kuang Li, Guangmin Wang, Debin Fang

Finite Element Analysis on Electromagnetic Field of 500 kV Four-circuit on Same Tower .......... 345
Bingyi Zhang, Xiaohui Wang, Guihong Feng

Comprehensive Assessment of Power Supply Service Quality Based on Electre III ......................... 351
Tiefeng Zahng, Jinsha Yuan, Xiaozhi Li

Broadband Powerline Communication System and Its Application ............................................... 358
Yang Bai, Ming Liang, Guangquan Li, Xu Zeng, Rui Yang, Yongqian Liu

A New Intelligent Method for Power Load Forecasting ................................................................. 364
Wei Li, Renhui Huang, Jie Bai, Dongxiao Niu

The Structure and Realization of Voltage Sags Monitoring System Based on GPRS and Web .......... 372
Pengliang Chen, Xiangning Xiao, Shun Tao, Zhifeng Ye

A Simulation Study on Stochastic Assessment of Voltage Sags in a Distribution System ................. 377
Rui Chen, Xiangning Xiao, Shun Tao

A Web and Multi-agent Based Electric Equipment Condition Monitoring and Fault Diagnosis Information Management System ................................................. 384
Xiangrong Zu, Lianzhong Liu, Qinglin Guo

High-voltage Power Line Communication System Based on OFDM ........................................... 391
Hao Zhang, Jinghong Guo

Ant Colony Algorithm Based Optimal Capacitor Placement in Distribution Systems ................. 396
Kun Yu, Yijia Cao, Xingying Chen, Zhenkun Li

Interharmonics Parameter Estimation Based on Improved SVD Algorithm .................................. 401
Ruijiao Shen, Honggeng Yang

Performance Evaluation of Voltage and Reactive Power Automatic Control Device ..................... 408
Zhong Bai, Long Xu, Ji Liu, Ming Lei, Maohua Shan
Detection of the Insulator Dirtiness Based on the Computer Vision .................................................. 414
Yumin Ge, Baoshu Li, Shutao Zhao, Chengzong Pang

Analysis of Mid-long Term Load Forecasting Methods in South Area of Guiyang City ................................................................. 418
Xuelian Liu, Qiyun Cheng

Trading Strategy for Distribution Company in Electricity Markets .................................................................................. 424
Min Liu, Yaonan Gu

Study on the Dynamic Performance of a Microgrid ............................................................................................ 428
Yibin Zhang, Xuehao Hu, Xueguang Wu

Power Quality Monitoring Based on DSP & GPRS ....................................................................................... 433
Chunming Liu, Lianguang Liu, Zhonglu Zhang

Discussion on Practical Functions of Feeder Automation Based on SCADA and FTU .............................................................. 438
Ying Liang, Yong Xin

Reliability Centered Maintenance Planning for Distribution Lines ........................................................................ 444
Bin Wu, Minghao Yang

White Certificate: the Inspiration to Energy Efficiency Market in China .......................................................... 450
Meng Li, Ming Liu, Zhaoguang Hu

Transient Selection for Ground Faults Based on Wavelet Transform ........................................................................... 455
Yanfeng Jia, Shun Yuan, Chunfang Zhao, Yundong Song

Research on 3D Temperature Field and Thermal-stress Field Numerical Simulation of Dry-type Transformer Curing Process .................................................................................................................. 460
Tao Jin, Yan Liu, Dingguo Cai, Pinghua Chen

Research on Increasing the Transmission Capacity of Existing Transmission Lines .................................................................................. 465
Bing Zhang, Lianguang Liu, Mingde Cui

Monitoring System of Distribution Power Network and Customer Information Based on MV&lV-PLC ................................................................. 471
Rui Yang, Ming Liang, Yan Ren, Xu Zeng, Huijuan Li, Chunyang Hu

Development of Automatic Meter-reading System Based on Broad Band Power Line Communication .................................................................................. 478
Jiandong Sun, Ming Liang, Huicong Fan, Weixing Li, Jing Zhang, Yongqian Liu

Study of Line Protection Measurement and Control Device Based on TMS320F2812 ................................................................................ 484
Weiming Tong, Shuai Yuan, Zhiheng Zhao

Temperature Detecting and State Analysis System for Urban Underground Power Grids Cable Joints .................................................................................. 489
Huijuan Li, Ming Liang, Li Zhang, Weixing Li, Yongqian Liu

Application of Fuzzy Linear Regression to Load Forecasting ............................................................................ 495
Guangfei Geng, Ruiqian Qu

Study of Discharge Process and Characteristics of Discrete Water Droplets on the Rtv Hydrophobic Surface in the Non-uniform Electric Field .................................................................................. 501
Jianwu Wang, Xishan Wen, Le Lan, Haiyan Liu

Preliminary Study on Estimation of Vrla Battery Capacity Using the Analysis of the Coup De Fouet .................................................................................. 509
Zhifeng Zhan, Xiaomin Xiang
Forward and Backward Iteration Power Flow Calculation Algorithm Based on Power Distribution Coefficient for Distribution Network ................................................................. 514
Shuanglong Shi, Fang Xie

The Use of Stationary Frame Resonant Controller in a Dynamic Voltage Restorer .......... 519
You Shi, Honggeng Yang, Chen Tiemin

GIS Based Streetlight Control Strategy ........................................................................ 524
Chunguo Jing, D. Shu, Rongfu He

A Cable Joint Temperature and Current Monitoring and Pre-warning System ................. 530
Xuwei Ren, Ming Liang, Huibin Chen, Yang Bai, Ying Wang, Yun Wang

Comparison of Dynamic Load Modeling Based on Back Propagation Neural Network and Traditional Method ................................................................. 537
Jin Wang, Yuting Fan, Xinran Li

The Triangle Mode Method for Localizing Power Quality Disturbances ......................... 542
Bo Wang, Zonghe Gao

Mid-term Load Forecasting Optimization Model Based on Multi-factor Influence of Season and Holiday ................................................................. 548
Da Liu, Dongxiao Niu, Yuanyuan Li

A Study of New Real-time Detection Algorithms of Voltage Sags and Their Compensation Modes ................................................................................................. 553
Chuan Yuan, Qin Zhao

Research on Constructing Urban Wide Outage Emergency Operation Technical Support System ................................................................. 560
Bo Jin, Tingjie Lu, Zhihui Zhang, Zhipeng Su

A New Method of Calculating the Critical Operation Time of Hvcb for Online Monitoring & Diagnosis ................................................................. 565
Zhensheng Wu, Wei Wang, Pinghao Ni

Data Compression Using 2-DWT Power Method for Power Quality Detection ................. 569
Yanfen Zhao, Honggeng Yang

CRM Management of the Power Supply Enterprises Based on Utility Analysis and Multistage Fuzzy Evaluation ................................................................. 575
Yuansheng Huang, Mingyan Wang, Weina Zhyang, Yan Zheng

Time-domain Overvoltage Calculation of Frequency-dependent Transformer Winding Under VFTO ................................................................. 581
Guishu Liang, Yijun Ma, Huaying Dong, Haifeng Sun

Impact of Temperature Variation on the Moisture Inside SF6 Electrical Equipments .......... 587
Xin Wang, Jingshun Lv, Yingzhong Wang

A New Control Strategy for Backup Protection Against Cascading Outages ..................... 591
Wei Zhang, Zhencun Pan

Monitoring Analysis and Mitigating of Disturbances Sources on Electricity Quality in Regional Power Network ................................................................. 597
Lu Liu

Identification of Power Quality Disturbances Based on Singular Value Decomposition of S-transform Time-frequency Matrixes ................................................................. 603
Shouliang Liu, Yong Peng, Xianyong Xiao, D. Chen
The Design and Realization of Measuring System of Bus-bar Temperature for HV Switch Board .......................................................... 607
Linsuo Zeng, Maojun Wang, Xiang Cheng

Experiment and Research of Acoustics Emission of Corona Discharge ......................................................... 612
Chengjiang Wang, Zhibin Jia, Yi Yang, Yukai Gu, Xiujie Jiang

Real Time Monitoring System for On-service Insulator Based on Acoustics Emission Technique .......................................................... 617
Chengjiang Wang, Zhibin Jia, Yi Yang, Yukai Gu

Research on Methods of Tracking the Maximum Power Points for a Photovoltaic Conversion Systems .......................................................... 624
Jing Li, Wei Dou, Zhengguo Xu, Yanchang Peng, Honghua Xu

Make for Scheduled Outage Management of Medium Voltage Power Network to Improve Power Supply Reliability .......................................................... 630
Bing Zhang, Kewei Fu, Guangfu Cui

Volume 2

Simulation Analysis of Zero Modal Transient Characteristics of Single-phase Earth Fault .......................................................... 639
Xinhui Zhang, Yongduan Xue, Zhencun Pan, Bingyin Xu, Peiyu Wei

Investigation of New Solutions for Mega City Power Grid Issues .......................................................... 645
Justin-Jin Zhang, Qianjin Liu, C. Rehtanz, S. Rudin

Application Study of Distance Relay in the Distribution System with Distributed Generations .......................................................... 652
Hao Xie, Dongping Xia, Jiping Lu

Researching of HVCB Diagnostics Base on Evidence Theory .......................................................... 658
Chi Zhang, Wei Wang, Lijie Xu, Lin Wang

Trading Between Distributed Generation and Connected Main Grid .......................................................... 664
Jun Fang, Dongxiao Niu, Jianxun Qi, Yan Zheng

Analytical Research in the Arrangement Forms of Supervoltage Cross-linked Cable and the Shroud Induced Voltage .......................................................... 670
Kangxin Wang

The Theoretical Analysis and Experiment About the Effect of Contamination Resistance on the Measuring Veracity of Functioning CVT .......................................................... 681
Yuting Yan, Xishan Wen, Xuefeng Ni, Lei Lan

Study of TCPS-PWM Based High-voltage Cascade Multilevel H-bridge Active Power Filter .......................................................... 686
Guoliang Zhou, Xinchun Shi, Xiu Hong Guo, Chao Fu

Multi-model Sifting Method for Medium and Long Term Load Forecasting Based on Evaluation of Trend Comparability .......................................................... 690
Yuanyuan Li, Dongxiao Niu, Da Liu

A New Type Dynamic Voltage Restorer .......................................................... 695
Yanjie Wang, Baoshu Li

Analytic Calculation of Economic Operation Parameters and Network Loss Control of Power Distribution Network .......................................................... 699
Zhigang Lu, Zongwei Zhang, Jinglin Chen, Yuntai Li
Impact and Implementation Research of IEC61850 for Utilities ................................................................. 705
   Jianzhong Fan, Lianshun Mu

Design and Realization of Unity Power Factor Three-phase Buck Type SVPWM Rectifier Based on FPGA .................................................................................................................. 711
   Zhaohui Tian, Yabin Li, Heming Li

Study of the Magnetically Controlled Shunt Reactor for Limiting Overvoltage in EHV Transmission Line ............................................................................................................. 717
   Yao Yao, Baichao Chen, Cihua Tian

Phase Space Method Detection on Single-phase-to-ground Fault in the Non-solidly Grounded Network ..................................................................................................................... 724
   Gongxin Li

Implementation of Output Interface for Power Electronic Transducer Based on IEC61850 .......................................................................................................................................... 730
   Xinrong Liu, Guang Yang

Visualization Software for Theoretical Line Loss Analysis and Optimal Reactive Power Compensation on Tower in Radial Distribution Feeders ............................................................................. 735
   Pengxiang Bi, Ming Zhang, Fang Xie, JianLi Ni, Yibin Lu

An Immunity-based Ant Colony Algorithm for Solving Distribution Network Planning Problem ........................................................................................................................................... 741
   Yongfeng Dong, Junhua Gu, Xiangdan Hou, Weli Yan

The Intelligent Substation Locating and Sizing Method Based on GIS and PSO ..................................................... 747
   Wenxia Liu, Linfeng Zhanq, Jianhua Zhang

Research on the Control and Protect System in DC Power Distribution System ................................................................. 755
   Junting Wang, Hang Zhang, Jungang Li, Dai Cui

Development of Integrated Intelligent Controlling for Permanent Magnetic Operating Mechanism ........................................................................................................................................... 761
   Xin Lin, Hao Zhang

The Comprehensive Evaluation Indexes System and Evaluation Model of the Electricity DSM ..................................................................................................................................................... 766
   Caiqing Zhang, Ting Wang

The Intelligent Research of Image Recognition Used for Unattended Substation ................................................................................................. 772
   Jun Yang, Xin Ai, Xiufang Jia, Yansong Li

Uncertain Loads Analysis and Its Applications .................................................................................................................. 778
   Jian Liu, Xiaomeng Wu, Hongli Cheng

An Intelligent Distribution Network Planning Based on GIS ............................................................................................................. 783
   Jun Liu, Han Yu, Jianhua Zhang, Qihong Yuan, Qi Qian, Jingfu Shang, Sheng Li

A Substation Location and Capacity Planning Method Based on Improved Particle Swarm Optimization ................................................................................................................................. 790
   Han Yu, Haibo Gao, Jianhua Zhang, Wenxia Liu

Study and System Development for Mid-long Term Power Demand Forecasting .................................................................................................................. 796
   Xuan Yu, Haozhong Cheng, Zonglin Yang

Neutral Protection Manner for 110-220 kV Ungrounded Transformer .................................................................................................................................................. 803
   Yanmin Pan, Haoialang Sun, Yan Liu

Study on the Encouraging Mechanism of Power Supply Enterprises Implementing DSM .................................................................................................................................................. 808
   Ting Wang, Caiqing Zhang
Interval Power Flow Analysis with Complex-fan Representation for Distribution Networks .......................................................................................................................... 814
Shouxiang Wang, Mingfu Chen, Chengshan Wang, Guodong Zhang

Control of Current-source PWM Rectifier Based on Back-stepping Design Approach ................................................................................................................................. 821
Xiaorong Zhu, Yonglong Peng, Heming Li, Xinchun Shi

The Application of Temporal Pattern Clustering Algorithms in DSM .............................................................................................................................................. 828
Lei Wen

Faulty Feeder Selection Simulation Based on Transient Zero Sequence Current in Non-solidly Grounded Network .......................................................................................................................... 833
Xinhui Zhang, Zhencun Pan, Yongduan Xue

Study on Fault Location Scheme for Distribution Network Based on Multiwavelet Theory ........................................................................................................................................... 840
Fangjie Wu, Chengxue Zhang, Liqian Fang, Zhiyuan Duan

Study on IEC61850 Based Solution for Substation Automation System Extension and Retrofit ................................................................................................................................. 845
Lei Jing, A. Hakala-Ranta

Development of the DSP-based Digital Flickermeter .................................................................................................................................................................................. 851
Guoliang Zhou, Xinchun Shi, Chao Fu, Jian Wang

Analysis and Investigation of Urban Electromagnetic Environment ........................................................................................................................................ 856
Quan Xia

A New Method of Transformer Monitoring On-line Based on Acoustic Wave Analysis ........................................................................................................................................... 860
Shutao Zhao, Jiawen Yan, Baoshu Li, Wendong Niu

Real-time Running State Monitoring of Power Equipment Based on Image Recognition ........................................................................................................................................... 866
Shutao Zhao, Xiaohui Zhu, Baoshu Li, Wendong Niu

Energy Saving Tunnel Lighting System Based on PLC ........................................................................................................................................ 872
Tianshu Huang, Fan Luo

Analysis of Urbanization Influence Towards Power Demand Forecasting ........................................................................................................................................ 879
Yan Zheng, Yuansheng Huang, Jun Fang, Dongxiao Niu, Jianxun Qi

Application of Modified Niche Genetic Algorithm (NGA) in Portfolio Decision ........................................................................................................................................... 885
Yan Zheng, Yuansheng Huang, Jun Fang, Dongxiao Niu, Jianxun Qi

Identification and Classification of Voltage Sags in Distribution System Using Wavelet Transform and Support Vector Machines .......................................................................................................................... 889
Wei Chen, Xiaohong Hao, Jie Lin

The Application of Optimal Combined Forecasting Technique Based on GRA in Mid/long Term Load Forecasting ........................................................................................................................................ 895
Wei Sun, Jianchang Lu, Ming Meng

Research on Neural Network Model Based on Maximum Conditional Entropy and Its Application on Short Term Load Forecasting ........................................................................................................................................... 900
Jianchang Lu, Wei Sun, Ming Meng

Research on Support Vector Machine Model and Its Application on Long-term Distribution Load Forecasting ........................................................................................................................................ 904
Wei Sun, Jianchang Lu, Ming Meng
Research on Electric Power Marketing Decision Support System. Based on Data Warehousing ................................................................. 909
   Yi Feng, Ming Zeng, JunGuo Jia, Hongdong Li, Xiao Lin

The Power System Harmonics Measurement Based on Wavelet Transform and Neural Networks .......................................................... 915
   Zhigang Zhang, Yi Shen

Urban Network Reconfiguration in Black Start ......................................................................................................................................... 920
   Yunhai Zhou, Xue Wei, Xiangyong Hu

Application of a Modified Niching Particle Swarm Algorithm in Optimization of Transformer Substation ....................................................... 924
   Fangjie Wu, Qi Wang

Robust State Estimation for Distribution Networks with Generation ........................................................................................................ 929
   Jianzhong Wu, Yixin Yu

Capacitor Optimal Switching Method of Distribution Systems Basing on Electrical Dissection of Paths Between Sources and Flows ........................................................................................................ 933
   Wenbo Hao, Yi Tang, Jilai Yu

An Unified Matrix Algorithm for Reliability Evaluation of Complex Medium-voltage Distribution System Based on Feeder Partition ........................................................................................................... 940
   Huijia Liu, Xiangyong Hu

Power Flow Analysis with Insertion of Wind Power Generators in Distribution Networks ........................................................................... 946
   Shouxiang Wang, Xingyue Jiang, Chengshan Wang

Analysis of the Impacts on Power System Developed by Two Kinds on Grid Wind Turbines ........................................................................... 952
   Xinyan Zhang, Weiqing Wang

Communication Network Planning of Distribution Network Automation System .................................................................................................. 958
   Jian Su, Wenxin Han, Lianshun Mu

Circuit Design and Mathematical Model of Statcom Based on Current Source Inverter ......................................................................................... 963
   Linsuo Zeng, Gang Wang, Xiang Cheng, Maojun Wang

The Arc-suppressing Coil with Three Phases and Five Columns Based on Changing Magnetic Coupling to Adjust Inductance ......................... 967
   Rui Liang, Chonglin Wang, Jianhua Liu, Tiaoxiao Dong, Guoxin Li, Caoyuan Ma

Study on Data Management System of Distribution Analysis .................................................................................................................... 973
   Hong Liu, Shaoyun Ge, Chengshan Wang, Jun Xiao, Qiang Gu, Xiaohui Li

A Daily-based Optimal Algorithm for Voltage and Reactive Power Control of Distribution Networks ................................................................. 979
   Peng Ye, Qing Bian, Jiahua Song, Bing Yao

Nonlinear Disturbance Attenuation Control for Four-leg VSI-based APF ........................................................................................................ 986
   Fanliang Deng, Juming Chen, Baogeng Yan, Jiang Zhang

An Evaluation Based Algorithm for Switches Planning in Distribution Network ........................................................................................ 994
   Chengshan Wang, Jing Xu, Jun Xiao, Tao Zhu

Research of Urban Objective Distribution Network Planning and Transition Mechanism ................................................................................. 1000
   Shaoyun Ge, Jing Zhang
Haofang Liu, Zengping Wang, Yan Xu, Jing Ma

Comparative Study on Connection Modes of Mid-voltage Distribution Networks .......... 1012
Shaoyun Ge, Xiaoming Li

Application of RPR Based MSTP Architecture and MPLS VPN in the MANs of Power System .................................................................................. 1018
Wanlong Liang

A Security Mechanism for Remote Configuration of Substation Communication .......... 1024
Nian Liu, Bin Duan, Qi Peng, Jian Wang, Shenglong Huang

Comprehensive Hierarchy and Method for Urban Distribution System Evaluation .......... 1030
Jun Xiao, Haixia Gao, Kai Lin, Yongwu Zhang

Interval-based Multi-layer Decomposition Spatial Load Forecasting Model and Calibration Method .................................................................................. 1037
Jun Xiao, Jing Zhang, Chengshan Wang, Zhe Liang

Pulse Interference Restraining for Off-line Partial Discharge Detecting in Transformers ................................................................. 1043
Qiong Fang, Yanqun Liao, Xiaohui Zhu

A New Intelligent Multifunction Portable Integrated Electrical Parameter Measuring Instrument ................................................................. 1048
Taoxin Tanq, Yunping Zou, Bin Xu

Application of CRM on Power Marketing ..................................................................... 1053
Ming Zeng, Junqiu Jia, Jian Tang, Hongdong Li, Tao Wang, Wenyu Zhou

A Study of Selectivity Earth Leakage Protection Device Based on 660 V Power System with Transformer Grounded Through High-resistance in a Coal Preparation Plant ......................................................... 1060
Yan Gao, Yanwen Wang, Shuwei Si, Zhining Wang

Mitigation of Voltage Dips and Voltage Swells by STATCOM/BESS ................................ 1069
Jie Zeng, Buhan Zhang, Chengxiong Mao, Yunling Wang

Communication Simulation of Network Based Current Differential Protection ................. 1074
Jianhua Liu, Sheng Su, Xiangjun Zeng

Distributed Coordinated Flexible Current Differential Protection System ........................ 1080
Sheng Su, Xiangjun Zeng

Research on New Principal-auxiliary Arc-suppression Coil Based on Single-phase Active Power Filter Technology .................................................... 1086
Yilong Qu, Weipu Tan, Zhe Liu, Yihan Yang

Reliability and Economical Analysis of Substation Automatic Source Switching Over ......................................................... 1093
Hongmin Zhang, Richang Xian, Tao Jiang

Research and Practice on the Social Evaluation of Power Grid Construction Project ............................................................. 1098
Jingmin Wang, Lianying Zhang, Yuzhang Wang

Technical and Economic Analysis on Vertical Grounding Electrodes for ±800kV UHVD .............................................................. 1104
Jianwu Wang, Xishan Wen, Zhongdong Du, Jiayuan Li
Study on Regional Forewarning Mechanism of Voltage Stability Assessment of Beijing Network
Jing Zhang, Minghao Yang, Shaofeng Zhang, Wenhai Hao

Research on Combined Grey Neural Network Model for Medium and Long Term Load Forecasting
Wei Sun, Chenguang Yang, Wei Shang

Applications of Anti-fault Ability Evaluation in Distribution System Expanding Planning
Jingqiu Xu, Jian Liu, Hongli Cheng

Energy-conservation and Economic Analysis for the Duct System of Cold Air Distribution with Ice Thermal Storage
Li Li

Fault Forecast of the Transformer Using New Theory of Grey System
Jing Wang, Jianxin Liu, Lizheng Wu

Discussion of Some Problems on Accelerating Universal Service of Electric Power in Market Condition in China
Ming Zeng, He Wang, Wan Fu Liu, Jian Tang, Tao Wang

Reliability of Transmission Tower Structure System Dominated by Wind Load Effect
Haibo Chen, Zonggao Liao

Application of Asynchronous Invocation Architecture in Massive Data Processing of Distribution Automation
Yi Liao, Dong Liu

Study on Application of Cim in Distribution Information Exchange
Lifang Li, Dong Liu

Modified Substitution Resistance Method for Calculating Distribution Energy Losses
Qinghe Chen, Dong Liu, Hua Fei, Rong Lu

Study on Evaluating Indices of Distribution Transformer Based on Principal Component Analysis
Tao Li, Dong Liu, ZhiJun Xia

Research on the Strategies of Voltage-grading and District-dividing Regionalization of the Beijing Electric Power Network
Han Li, Jingkai Zhu, Di Zhang

A Novel Traveling Wave Detection Method for Single-phase to Ground Fault of Feeder Based on Wavelet Analysis
Jingguang Huang, Xiangyong Hu, Hanmei Hu, Yanping Lv

Quantitative Analysis of FTIR Used in Transformer Monitoring
Honglei Li, Linghui Yang, Xianyong Liu, Bo Lu

Development and Realization of a Novel Measurement and Control Method for Automatic Compensation Arc-suppression Equipment
Jing Yan, Zhiyang Ma

The Cost and Compensation on the Social Benefits of Power Supplying Enterprises
Zehong Li, Lixin Dai, Yongchen Li
