Proceedings

International Conference on Management of e-Commerce and e-Government

Nanchang, Jiangxi, P. R. China
17-19 October 2008
Table of Contents

Greetings from the General Chairs .........................................................................................................xii
Greetings from the Program Chairs ......................................................................................................xiii
Committee Lists ........................................................................................................................................xiv
Keynote Addresses .....................................................................................................................................xvii

Session 1: Supply Chain Management

The Design and Implementation of the Traffic Logistics System Based on Internet .................................................................3
   Guo-ping Yu, Li-juan Huang, Pan Liu, and Shi-xin Wang
An RFID-Based Automatic Identification System on Modern Grain Logistics .............................................10
   Zhuang Er, Fei Yu Lian, and Jin Gong Lian
The Appliance of Supply Chain Management Theory to Tourism Development ........................................14
   Liying Wei and Ke Lu
A Research on Related Questions of Chinese Food Cold Chain Development ...............................................18
   Lan Wang and Zheng Ya Zhang

Session 2: Mobile Commerce and Applications

A New Mobile Information Security Solution Based on External Electronic Key .................................................................25
   Tiejun Pan, Leina Zheng, Chengbin Fang, Wenji Huang, and Leilei Fang
The Videotex Hot Line Lottery-Ticket-Buying Solution Based on Mobile GPRS System .................................................................30
   Yong Xu
Design of Lottery Betting Payment System Based on Mobile Terminal .........................................................36
   Shaoping Chen
The Design of Mobile E-Business System Based on Open Source Software to Small and Medium-Sized Enterprise .................................................................41
Leina Zheng, Tiejun Pan, Guoyan Ren, Chengbin Fang, and Yaofei Chen

Developing a Simple Java-Based Mobile Simulation Game .................................................................45
Lei Shu

Research and Implementation of Mobile Payment Based on J2ME ............................................................49
Siwen Luo

Analysis on Mobile E-Commerce Value-Chain ...........................................................................................53
Mi Yan

A Semantic Web-Based Enterprise Information Integration Platform for Mobile Commerce ........................................57
Zhiqiang Wei, Mijun Kang, and Wei Zhou

Sequence Mining for User Behavior Patterns in Mobile Commerce .........................................................61
Yu Ning and Hongbin Yang

Session 3: E-Commerce Management

The Hybrid MCDM Model for Risk Evaluation in Electronic Commerce Development .................................................................67
Wei Liu

Research on Recommendation List Diversity of Recommender Systems ...................................................72
Fuguo Zhang

E-Commerce Based Agents over P2P Network .............................................................................................77
Zhibing Zhang

The Research of E-Commerce Capability and Business Performance: A Resource-Based View .................................................................82
Zhijun Kuang and Shenghua Xu

Analysis on E-Business’s Optimal Behavior Based on Principal-Agent Theory ...........................................88
Yuhai Lu

Analysis on E-business’s Behaviors of Chinese Enterprises ........................................................................92
Yanfen Zou

The Electronic Commerce Developmental Strategy of Small and Medium-Sized Enterprises under the Network Economic Pattern .................................................96
Liping Yan

Research on Mobile Payment in the E-Commerce .........................................................................................100
Yunhong Li and Siwen Luo

The Reformation of the C2C Electronic Commerce Transaction Process .....................................................104
Guoyou Zhang, Yueqiang Zhang, and Yu Li

Status and Analysis of E-Commerce Application in Small Medium Enterprises — A Case Study of Wenzhou .................................................................109
Huanchun Yang
## Session 4: E-Government Management

<table>
<thead>

</tbody>
</table>
Research on Model of Biometric Identification Emergency Response in Electronic Commerce ................................................................. 185
   Shubao Xing, Huifeng Xue, and Xiujuan Yan
On the Legal Status of Electronic Agent in International Trade .................................................................................................................. 189
   Xiping Lv and Delin Hou
Personalized Recommendation Based on Ontology Inference in e-Commerce ...................................................................................... 192
   Siping He and Meiqi Fang
Research on Tourism E-Commerce Technology Application in the Era of Information Services ........................................................................ 196
   Liang Zhao, Min Fu, and Guanghong Cao
Clustering Technology Application in e-Commerce Recommendation System .......................................................................................... 200
   JingHui Wu, Qiang Liu, and SiWen Luo
On the Peak-Experience in the Game GUI Design .................................................................................................................................. 204
   Fei Hu and Lixia Ji
Virtual Reconstruction of FouGuang Temple Based on Virtual Reality ........................................................................................................ 208
   Shi Zhu Lu

Session 6: Web Services

An Anatomy to SaaS Business Mode Based on Internet .......................................................................................................................... 215
   HanCheng Liao and ChangQi Tao
Formal Descriptive Mechanism of the Ontology Language RDF ........................................................................................................... 221
   Zhongsheng Qian
Design and Implementation of Voice Web Pages for Online Shopping Based on .NET and Streaming Media .................................................. 226
   Guoqiang Di, Yaoyao Liu, Lingchao Han, and Jianping Wu
Research on the Solving Scheme of E-Commerce System Based on Web Services .................................................................................. 230
   Ying Hao and Cheng Lv
Optimization of Web Service Composition Based on Dynamic Weighted Path Tree .................................................................................. 234
   Huanyao Hu, Weiqing Dong, and Guang Yang

Session 7: Search Engine and Data Management

A Novel Data Consistency Algorithm of Mobile E-Commerce ...................................................................................................................... 241
   Zheng Wang, Hai-shan Tian, and Zi-Li Li
XML Node Semantic Weight Model Based on VSM ................................................................................................................................. 247
   Xinfeng Lai, Changxuan Wan, and Dexi Liu
A Novel Storage Architecture of In-Memory Databases Supporting Real-Time E-commerce Applications .......................................................... 252
   Kun Deng, Guoqiong Liao, Yukun Huang, Jing Li, and Jiali Xia
Approximate Searching XML Elements Based on Semantic Restrictions ............................................................................................. 257
   Gelin Deng
Application of Decision Tree Induction Technology in Insurance Data
Pretreatment ..............................................................................................................................................................261
Shu Wei, Daipeng Gao, and Siwen Luo

A Novel Pre-segmentation Algorithm of Handwritten Chinese Characters in e-Commerce .........................................................................................................................................................265
Zili Li and Feng Zhou

Session 8: Knowledge Management, Enterprise Management, and Information
Optimal Investment and Consumption Model with One Factor .................................................................273
Jiuying Dong

Analysis of Resources Allocation Efficiency of China’s Software Industry — Based on Empirical Analysis of China’s Eastern Region .........................................................................................................................................................277
Ye Xu and Qiuyan Zhang

A Mechanism Framework for Cluster Enterprise Innovation: A View of Co-Governance ..........................................................................................................................................................................................................................................................283
Liang Ying

A New Quantitative Analysis Method for Financial Risk Early Warning of Unlisted Small and Medium Enterprise..........................................................................................................................................................................................................................................................289
Guoyu Han, Qinfen Wu, Zhongjian Le, Juling Ding, and Ruihua Chen

Multiple Stepwise Regression Analysis on Knowledge Evaluation ..........................................................................................................................................................................................................................................................297
Yuqing Lan and Shuhang Guo

Research on the Strategic Management of Informatization Investment in Small and Medium SIZED Enterprises ..........................................................................................................................................................................................303
Jianying Liu and Juan Tan

A Study on E-Commerce and Competitive Advantages of an Enterprise ..........................................................................................................................................................................................................................................................307
Xiaoping Yang

Research and Implementation of Enterprise CA System Based on PKI ..........................................................................................................................................................................................................................................................311
Yanrong Shi, Danning Sun, and Yongqiang He

Research on Fuzzy Comprehensive Evaluation Model of E-Commerce Enterprise Image Based on Multi-Granular ..........................................................................................................................................................................................................................................................315
Juan Chen and Bin Lu

Review on the Patentability of Business Methods in E-Commerce ..........................................................................................................................................................................................................................................................320
Han-xia Liu

Design of an E-Procurement System Based on Business Intelligence Tools ..........................................................................................................................................................................................................................................................324
Shaoling Deng and Yan Li

An Integrated Framework to Explicate CIOs’ Impulsions on Technology Investment ..........................................................................................................................................................................................................................................................328
Hongmei Huo and Da Yang

Research on Neural Network Cost Prediction Model Based on the Rough Sets Theory in ERP ..........................................................................................................................................................................................................................................................332
X.F. Zhang

Dynamic Pricing of Perishable Products by Variational Method Facing Rational Consumers

Chunlin Luo and Jian Liu

The Revenue Model of Online Third-Party Payment Based on Game Theory

Yiqun Li and Xuezheng Zhang

A Loss Reportable E-Cash Scheme without TTP Based on ECC

Xiaoping Zhang and Cheng Zhong

Research and Implementation of RSA Algorithm in Java

Jiezhao Peng and Qi Wu

Is Credit Card Fraud a Real Crime? Does it Really Cripple the E-Commerce Sector of E-Business?

Waqar Ahmad

Credit Risk of Electronic Commerce in China

Jiemin Yuan

Factors Impacting Chinese Consumers’ Macro-Level Trust on B2C E-Commerce: A Research of Model Development

Shouzhong Wang

Risk Prevention Measures for Private Equity in China

Wang Bo

An Adaptive Middle Frequency Embedded Digital Watermark Algorithm Based on the DCT Domain

Liang Tan and Zhi-jun Fang

An Economic Analysis and Solutions of Trust Mechanism in E-Commerce Environment

Huan-huai Zhou, Xian-wu Hu, and Qi Ruan

Analysis on the Relevant Legal Issues of Mobile Phone Advertisement

Ke Zhang

Security Mechanism to Protect the Integrity of Web Documents

Jianhua Zhang, Nan Zhang, Xianze Yang, and Chunyan Yan

A New Security Trust Model for Peer-to-Peer E-Commerce

Yu Wang, Yue-long Zhao, and Fang Hou

Analyze and Prevent the Security Risks of E-Commerce Privacy

Xiaoming Meng
Session 10: Business Intelligence and Others

Positive Periodic Solutions to Singular Second-Order Semi-Linear Differential Equations .......................................................... 411

Yuren Zou and Zhilong Li

Grid Task Scheduling Based on Adaptive Ant Colony Algorithm .................................................................................. 415

Ai-hong Liu and Zheng-you Wang

Decision Analysis of Sequence Multi-Stage IT Project under Uncertainty .......................................................... 419

Jian Zhang, Suling Jia, and Yanqin Guo

The Options of Regulators in Environmental Protection .................................................................................. 425

Zhilong Li and Weiming Yi

A New Decision Making Method under Interval Data Uncertainty ........................................................................ 429

Zheng-you Wang and Wen Xiao

The Research of Industrial Clusters Development Based on the Network Environment .................................................. 433

Guoliang Zhang and Bo Zhang

Assessment on the Adaptivity of Adaptive Systems .................................................................................. 437

Da Yang and Hongmei Huo

Qos Multicast Routing Optimization Based on Memetic Algorithm ........................................................................ 441

Qingzhou Zhang, Ziqiang Wang, and Dexian Zhang

Author Index .......................................................................................................................................................... 445
