2007 First International Workshop on the Economics of Software and Computation

(ESC 2007)

Minneapolis, Minnesota, USA
20 – 26 May 2007
Table of Contents

First International Workshop on the Economics of Software and Computation (ESC 2007)

Workshop Organization

An Economic Model for Software Architecture Decisions .................................................................1
  Paul C. Clements

Using Economics as Basis for Modelling and Evaluating Software Quality ........................................4
  Stefan Wagner

Economics-Driven Software Mining .....................................................................................................8
  Rami Bahsoon and Wolfgang Emmerich

Balanced Decision Making in Software Engineering—General Thoughts and
a Concrete Example from Industry ........................................................................................................13
  Hannes Omasreiter

Quality-Attribute Based Economic Valuation of Architectural Patterns .............................................17
  Ipek Ozkaya, Rick Kazman, and Mark Klein

A Simple Estimate of the Cost of Software Project Failures and
the Breakeven Effectiveness of Project Risk Management .................................................................20
  Stephen P. Masticola

Toward a Calculus of Confidence .........................................................................................................24
  Christopher Scaffidi and Mary Shaw

Valuating Software Service Development: Integrating COCOMO II and Real Options Theory ................27
  Brendan Tansey and Eleni Stroulia

Computation Cost in Grid Computing Environments ..........................................................................30
  Enis Afgan and Purushotham Bangalore
