2007 International Workshop on Software Engineering for Adaptive and Self-Managing Systems

(SEAMS)

Minneapolis, Minnesota
20 – 26 May 2007
Proceedings

ICSE 2007 Workshops

Table of Contents

Workshop Organization

SEAMS 2007: Software Engineering for Adaptive and Self-Managing Systems .......................................................01
Betty H.C. Cheng, Rogério de Lemos, Stephen Fickas, David Garlan, Marin Litoiu, Jeff Magee, Hausi A. Müller, and Richard Taylor

(See also Companion Volume.)

Architecture-Based Techniques for Adaptive Systems

An Architectural Style for Solving Computationally Intensive Problems on Large Networks ..............................................................03
Yuriy Brun and Nenad Medvidovic

An Architectural Strategy for Self-Adapting Systems.................................................................................................11
Danny Weyns and Tom Holvoet

Towards an Autonomic Element Architecture for ASSL .........................................................................................21
Emil Vassev and Joey Paquet

Representing Hierarchical Mobility in Software Architectures...................................................................................31
Fernando J. Barros
Analyzing Quality Attributes of Adaptive and Self-Managing Systems

Quality Criteria and an Analysis Framework for Self-Healing Systems .................................................................39
  Sangeeta Neti and Hausi A. Müller

Model-Based Software Design and Adaptation .................................................................................................49
  Hassan Gomaa and Mohamed Hussein

Extensible Contract Broker for Performance Differentiation ..............................................................................59
  Pedro Furtado and Celso Santos

Architectural Patterns for Autonomic Computing

The WSDM of Autonomic Computing: Experiences in Implementing Autonomic Web Services ........................................67
  P. Martin, W. Powley, K. Wilson, W. Tian, T. Xu, and J. Zebedee

Towards a Real-Time Reference Architecture for Autonomic Systems .............................................................75
  Bogdan Solomon, Dan Ionescu, Marin Litoiu, and Mircea Mihaescu

A Proposal for an Autonomic Grid Management System ..................................................................................85
  Ron Desmarais and Hausi Muller

Implementing Adaptive Performance Management in Server Applications .......................................................92
  Yan Liu and Ian Gorton

Analyzing Quality Attributes of Adaptive and Self-Managing Systems

Digitally Evolving Models for Dynamically Adaptive Systems ........................................................................102
  Heather J. Goldsby, David B. Knoester, Betty H. C. Cheng, Philip K. McKinley, and Charles A. Ofria

Mixed-Mode Adaptation in Distributed Systems: A Case Study .........................................................................111
  Karun N. Biyani and Sandeep S. Kulkarni

Designing Run-Time Fault-Tolerance Using Dynamic Updates ........................................................................121
  Ali Ebnenasir

Modeling the Design and Evolution of Adaptive, Self-Managing, and Ubiquitous Systems

A Survey of Approaches to Adaptive Application Security .............................................................................130
  Ahmed Elkhodary and Jon Whittle

Goal-Directed Context Validation for Adaptive Ubiquitous Systems .............................................................138
  Chang Xu, S. C. Cheung, and W. K. Chan
Research Issues in Multiple Policy Optimization Using Collaborative Reinforcement Learning

Ivana Dusparic and Vinny Cahill

Process Evolution with Atomicity Consistency

Chunyang Ye, S. C. Cheung, and W. K. Chan
