Welcome from the General Chair and Program Committee
Chair
Organizing Committee
Research Track Program Committee
Research Track Secondary Reviewers
Fast Abstract Committee
Student Paper Committee

Keynotes
How Economics Shape Reliability: Lessons and Opportunities from Windows Development ..........................................................1
Solom Heddaya
Software Reliability - 40 Years of Avoiding the Question ........................................................................................................2
Russell Morris
Using Measures and Risk Indicators for Early Insight into Software Product Characteristics such as Software Safety ...................................................................................................4
Victor Basili

Panel Summary
Anything You Want to Ask about Software Reliability Engineering ..................................................................................................6
Mike Hinchey, Karama Kanoun, Mikael Lindvall, Michael R. Lyu, Tiziana Margaria,
Veena B. Mendiratta, Paul Pettersson, Norm Schneidewind, and Eric Wong

Research Track: Models 1
A Model-Driven Approach to Assuring Process Reliability ..................................................................................................................7
Ibrahim Habli and Tim Kelly
Predicting Defect Content and Quality Assurance Effectiveness by Combining Expert Judgment and Defect Data - A Case Study ........................................................................................................17
Michael Kläs, Haruka Nakao, Frank Elberzhager, and Jürgen Münch
Using an RBF Neural Network to Locate Program Bugs ....................................................................................................................27
W. Eric Wong, Yan Shi, Yu Qi, and Richard Golden
Research Track: Java 1
Concurrent Contracts for Java in JML .............................................................................................................................................37
  Wladimir Araujo, Lionel Briand, and Yvan Labiche
Changing Java’s Semantics for Handling Null Pointer Exceptions ........................................................................................................47
  Kinga Dobolyi and Westley Weimer
Resolving JavaScript Vulnerabilities in the Browser Runtime .........................................................................................................57
  Ejike Ofuonye and James Miller

Research Track: Models 2
Trace Normalization ........................................................................................................................................................................67
  Madeline Diep, Sebastian Elbaum, and Matthew Dwyer
Analysis of Computer Security Incident Data Using Time Series Models .......................................................................................77
  Edward Condon, Angela He, and Michel Cukier
Detection and Prediction of Resource-Exhaustion Vulnerabilities ..................................................................................................87
  Joao Antunes, Nuno Ferreira Neves, and Paulo Jorge Verissimo

Research Track: Network and Operating System
A QoS-Aware Middleware for Fault Tolerant Web Services ...........................................................................................................97
  Zibin Zheng and Michael R. Lyu
Operating System Robustness Forecast and Selection ................................................................................................................107
  Xiaoen Ju and Hengming Zou
Automated Identification of Failure Causes in System Logs ...........................................................................................................117
  Leonardo Mariani and Fabrizio Pastore
Profiling the Operational Behavior of OS Device Drivers ..............................................................................................................127
  Constantin Sârbu, Andréas Johansson, Neeraj Suri, and Nachiappan Nagappan

Research Track: Test 1
RUGRAT: Runtime Test Case Generation Using Dynamic Compilers .........................................................................................137
  Ben Breech, Lori Pollock, and John Cavazos
All-Paths Test Generation for Programs with Internal Aliases ......................................................................................................147
  Nikolai Kosmatov
  Ilincia Ciupa, Bertrand Meyer, Manuel Oriol, and Alexander Pretschner

Research Track: Test 2
A Framework for Testing Peer-to-Peer Systems ...........................................................................................................................167
  Eduardo Cunha de Almeida, Gerson Sunyé, Yves Le Traon, and Patrick Valduriez
Testing of User-Configurable Software Systems Using Firewalls ................................................................................................177
  Brian Robinson and Lee White
Automated Support for Propagating Bug Fixes .............................................................................................................................187
  Boya Sun, Ray-Yaung Chang, Xianghao Chen, and Andy Podgurski
Cost Curve Evaluation of Fault Prediction Models ......................................................................................................................197
  Yue Jiang, Bojan Cukic, and Tim Menzies
Research Track: Empirical 1

A Joinpoint Coverage Measurement Tool for Evaluating the Effectiveness of Test Inputs for AspectJ Programs

Fadi Wedyan and Sudipto Ghosh

Exploring Quality Metrics to Support Defect Management Process in a Multi-site Organization - A Case Study

Kirsi Korhonen and Outi Salo

Comparison of Empirical Data from Two Honeynets and a Distributed Honeypot Network

Robin Bloomfield, Ilir Gashi, Andrey Povyakalo, and Vladimir Stankovic

Research Track: Test 3

The Feasibility of Automated Feedback-Directed Specification-Based Test Generation: A Case Study of a High-Assurance Operating System

Automated Generation of Pointcut Mutants for Testing Pointcuts in AspectJ Programs

Prasanth Anbalagan and Tao Xie

Testing Software Product Lines Using Incremental Test Generation

Engin Uzuncaova, Daniel Garcia, Sarfraz Khurshid, and Don Batory

Research Track: Empirical 2

Using Statistical Models to Predict Software Regressions

Alexander Tarvo

Reliability Assessment of Mass-Market Software: Insights from Windows Vista®

Paul Luo Li, Mingtian Ni, Song Xue, Joseph P. Mullally, Mario Garzia, and Mujtaba Khambatti

Using Fault Modeling in Safety Cases

Robyn Lutz and Ann Patterson-Hine

Fast Abstracts: Reliability

E-RACE, A Hardware-Assisted Approach to Lockset-Based Data Race Detection for Embedded Products

Lily Huang, Michael Smith, Albert Tran, and James Miller

An Effective Software Reliability Analysis Framework for Weapon System Development in Defense Domain

Daiju Lee, Jongmoon Baik, Hoyeon Ryu, and Ju-Hwan Shin

A Modified Genetic Algorithm for Parameter Estimation of Software Reliability Growth Models

Chao-Jung Hsu, Chin-Yu Huang, and Tsan-Yuan Chen

Reliability Assessment of Translated VMF/Link-16 Messages

Jingyu Kim, Sungwon Kang, and Nohbok Lee

An Algebra-Based Reliability Prediction Approach for Composite Web Services

Ning Huang, Dong Wang, and Xiaoguang Jia

Architecting for Reliability - Recovery Mechanisms

Robert S. Hanmer and Veena B. Mendiratta
Replication vs. Failure Prevention - How to Boost Service Availability? .......................................................... 289
   Felix Salfner and Katinka Wolter

Fast Abstracts: Security and Safety
Assessing the Effect of Software Failures on Trust Assumptions ................................................................. 291
   Qian Feng and Robyn Lutz
GB Coverage Criteria: The Measurement for Testing a *Go Back* Function Based on a Pushdown Automaton ................................................................. 293
   Tomohiko Takagi and Zengo Furukawa
Discovering the Fault Origin from Field Traces .............................................................................................. 295
   Syed Shariyar Murtaza, Mechelle Gittens, and Nazim Madhavji
Seasonality in Vulnerability Discovery in Major Software Systems .............................................................. 297
   HyunChul Joh and Yashwant K. Malaiya
Vulnerability Discovery Modeling Using Weibull Distribution ....................................................................... 299
   HyunChul Joh, Jinyoo Kim, and Yashwant K. Malaiya
An Analysis Framework for Inter-system Interaction Behavior ............................................................... 301
   Christopher Ackermann, Deane E. Sibol, William C. Stratton, Mikael Lindvall, and Sally Godfrey
Static Detection of Redundant Test Cases: An Initial Study ......................................................................... 303
   Nuo Li, Patrick Francis, and Brian Robinson

Student Papers
The Effect of the Number of Defects on Estimates Produced by Capture-Recapture Models ............................. 305
   Gursimran Singh Walia and Jeffrey C. Carver
Modeling the Software Failure Correlations When Test Automation Is Adopted during the Software Development ................................................................. 307
   Chu-Ti Lin and Chin-Yu Huang
Using UML Sequence Diagrams and State Machines for Test Input Generation ............................................. 309
   Aritra Bandyopadhyay and Sudipto Ghosh
Automated Fix Generator for SQL Injection Attacks ................................................................................ 311
   Fred Dysart and Mark Sherriff
Efficient Operational Profiling of Systems Using Suffix Arrays on Execution Logs ........................................ 313
   Meiyappan Nagappan, Mladen A. Vouk, Kesheng Wu, Alex Sim, and Arie Shoshani
Ranking Attack-Prone Components with a Predictive Model ........................................................................ 315
   Michael Gegick and Laurie Williams
Comparative Study of Fault-Proneness Filtering with PMD ........................................................................ 317
   Hideaki Hata, Osamu Mizuno, and Tohru Kikuno
Software Reliability Modeling with Logistic Test Coverage Function .......................................................... 319
   Haifeng Li, Qiuying Li, and Minyan Lu
A Hardware-Assisted Tool for Fast, Full Code Coverage Analysis ............................................................. 321
   Albert Tran, Michael Smith, and James Miller
Reusing Existing Test Cases for Security Testing ...................................................................................... 323
   Dazhi Zhang, Wenhua Wang, Donggang Liu, Yu Lei, and David Kung
On Reliability Analysis of Open Source Software - FEDORA ..........................................................325
Prasanth Anbalagan and Mladen Vouk

Author Index
