# TABLE OF CONTENTS

Maximum Power Point Tracking Method for the Voltage-Mode Grid-Connected Inverter of Photovoltaic Generation System .......................................................... 1  
*Wen-Jung Chiang, Hurng-Liahng Jou, Jinn-Chang Wu*

Modelling and Simulation of Solar PV Array under Partial Shaded Conditions ........................................ 7  
*R. Ramaprabha, B. L. Mathur*

Behavior Matching Technique Applied to a Three-Phase Grid-Connected PV System ................................ 12  
*Marcio Mendes Casaro, Denizar Cruz Martins*

Application of the dq0 Transformation in the Three-Phase Grid-Connected PV Systems With Active And Reactive Power Control ......................................................... 18  
*Mateus F. Schonardie, Denizar C. Martins*

Cogging Torque Reduction in Dual-Rotor Permanent Magnet Generator for Direct Coupled Stand-Alone Wind Energy Systems ....................................................... 24  
*p. Sivachandran, P. Venkatesh, N. Kamaraj*

Nonlinear Model Predictive Control (NMPC) of Fixed Pitch Variable Speed Wind Turbine .................. 29  
*D. Q. Dang, Y. Wang, W. Cai*

Voltage Regulation of a Stand-Alone Induction Generator using Thyristor-Switched Capacitors ............. 34  
*M. H. Haque*

Demonstration of Parallel Operation of Single-Phase and Three-Phase Induction Generators for Off-Grid Operation .............................................................................. 40  
*M. H. Haque*

An Agent-Based Approach to Renewable Energy Management in Eco-Building ..................................... 46  
*Jun Zeng, Jie Wu, Jun-feng Liu, La-mei Gao, Min Li*

VSC With T-Connected Transformer Based Decoupled Controller For A Pico Hydro Power Generation ............................................................................. 51  
*Bhim Singh, Gaurav Kumar Kasal*

An Empirical Analysis for the Import Risk of China's Petroleum Products Based on the Improved Portfolio Approach ................................................................. 57  
*Gang Wu, Yi-Ming Wei, Ying Fan*

Robust LED Backlight Driver with Low Output Voltage Drop and High Output Current Accuracy ........ 63  
*Tse-Ju Liao, Chern-Lin Chen*

*V. Malathi, N. S. Marimuthu*

Detection and Classification of Impulse Faults in Transformer using Wavelet Transform and Artificial Neural Network ............................................................. 72  
*N. Vanamadevi, M. Arivamudhan, S. Santhi*

Multi-Agent Coordination for DER in Microgrid .................................................................................. 77  
*T. Logenthiran, Dipit Srinivasan, David Wong*

Modeling and Optimization of Renewables: Applying the Energy Hub Approach ............................... 83  
*M. Schulze, L. Friedrich, M. Gautschi*
AGC For Distributed Generation ................................................................. 89
B. Santosh Kumar, S. Mishra, N. Senroy

Optimal Bidding Strategy for Multi-Unit Pumped Storage Plant in Pool-Based Electricity Market Using Evolutionary Tristate PSO ................................................................. 95
P. Kanakasabapathy, K. Shanti Swarup

Multilevel Peukert Equations Based Residual Capacity Estimation Method for Lead-Acid Battery .............................................................................................................. 101
Yu-Hua Sun, Hurng-Liahng Jou, Jinn-Chang Wu

A Simulation Study on Solar Energy Seasonal Storage by Phase Change Material ................................................................. 106
Qi Qi, Yiqiang Jiang, Shiming Deng

Ripple Voltage Suppression Method for DC/DC Boost Converter of the Grid-Connected Renewable Power Generation System ............................................................................. 110
Jia-Min Shen, Hurng-Liahng Jou, Jinn-Chang Wu

Soft Switched AC-Link Direct-Connect Photovoltaic Inverter .......................................................................................................................... 116
Mahshid Amirabadi, Anand Balakrishnan, Hamid A. Toliyat, William Alexander

A New Evaluation System for Energy Saving Based on Energy Efficiency and Loss Ratio ................................................................. 121
Y. Q. Zhu, Z. D. Yin

Analysis of a Switched-Reluctance Generator for Maximum Energy Conversion .......................................................................................................................... 125
S. Wongguokoon, S. Kittiratsatcha

Dead-Time Elimination of PWM-Controlled Inverter/Converter without Separate Power Sources for Current Polarity Detection Circuit ................................................................. 130
Yong-Kai Lin, Yen-Shin Lai

LLC Resonant Converter for Wireless Energy Transmission System with PLL Control .......................................................................................................................... 136
Tso-Sheng Chan, Chern-Lin Chen

Multi-Mode MPPT Control for Improved Efficiency .......................................................................................................................... 140
Jung-Min Kwon, Woo-Young Choi, Bong-Hwan Kwon

An Automated and Economic System for Measuring of the Currant-Voltage Characteristics of Photovoltaic Cells and Modules .......................................................................................................................... 144
Dariga Meekhun, Vincent Boitier, Jean-Marie Dilhac, Gregory Blin

Compound Material for Injection Molded PEM Fuel Cell Bipolar Plates .......................................................................................................................... 149
Jenn-Kun Kuo, Shiuh-Ming Chang

Photovoltaic Properties and Stability of Pentacene-Fullerene Double Heterojunction Devices .......................................................................................................................... 155
Terence K. S. Wong, Yong Xu

Optimal Allocation for Improving System Reliability Using AHP .......................................................................................................................... 159
Gwo-Luh Lee, Horng-Jyh Lin, Tse-Wei Yu, Chih-Chieh Ma, Shang-Lee Chyou

Development of Fault Location Algorithm for Distribution Networks with DG .......................................................................................................................... 164
Zhu Guo-fang, Lu Yu-ping

Voltage Transient Study of Wind Farm Under Power System Fault .......................................................................................................................... 169
Xin-yan Zhang, Wei-qing Wang

The Intelligent Control Method Study of Variable Speed Wind Turbine Generator .......................................................................................................................... 173
Xin-yan Zhang, Jing Cheng, Wei-qing Wang

Economical Performance Study for NGCC System with CO₂ Removal Plant .......................................................................................................................... 178
Rongrong Zhai, Yongping Yang, Liqiang Dian, Qin Yan

Exergy Analysis of CO₂ Recovery Process by Specific Consumption .......................................................................................................................... 182
Rongrong Zhai, Yongping Yang, Liqiang Dian, Qin Yan
The Study of the Protection Revision Method Based on the DG Effect to Protection Sensitivity
Lin Xia, Lu Yu-ping, Wang Lian-he
............................................................................................................................... 186

Fuzzy Controller of Variable Pitch Wind Driven Generator Based on Interpolation Algorithm
Peng Xuange, Li Yaolin, Li Peipei
............................................................................................................................... 192

Based on CAN Bus Wind Generating Set Online Monitoring and Fault Diagnosis System
Li Yaolin, Peng Xuange, Li Peipei
............................................................................................................................... 195

Evaluation of Solar Collector Plant to Contribute Climate Change Mitigation
Morris Brenna, Federica Foiadelli, Mariacristina Roscia, Dario Zaninelli
............................................................................................................................... 198

WRIG Based Wind Conversion System Excited by Matrix Converter with Currant Control Strategy
S. Zhang, K. J. Tseng, T. D. Nguyen
............................................................................................................................... 203

Thermal Storage Cooling Tower for Underground Commercial Building
Wenjie Liu, Xiaoping Miao, Jinsheng Wang, Xibin Ma, Jing Ding
............................................................................................................................... 209

A Flywheel Cell for Energy Storage System
............................................................................................................................... 214

Design of Modular Inverter for Distributed Power Generation
Fu-Sheng Pai, Shyh-Jier Huang, Min-Fu Hsieh, Chin-Ming Lin
............................................................................................................................... 220

Distribution Model Analysis of High-Efficient Equipments Considering Rebate
Jong-Ryul Won, Jung-Hoon Kim
............................................................................................................................... 225

Research on a Novel Buck-Boost Converter for Wind Turbine Systems
Bing Hu, Liuchen Chang, Yaosuo Xue
............................................................................................................................... 228

Control and Design of a Novel Buck-Boost Converter for Wind Turbine Applications
Bing Hu, Liuchen Chang, Yaosuo Xue
............................................................................................................................... 234

The Impact on Power Quality by PWM Converter in Micro-Grid
Huang Wei, Zhang Jianhua, Xie Qinghua, Wu Ziping
............................................................................................................................... 239

Controlling and Operating Analysis of DFIG Wind Generator Between in a Large Utility Network and in an Isolated Micro-Grid
Yang Jingyan, Huang Wei, Yang Renhua, Zhang Jianhua, Yang Xu
............................................................................................................................... 244

Analysis of Characteristics of Simultaneous Faults in Electrical Power Systems using Wavelet Transform
A. Ngaopitakkul, W. Pongchaisrikul, A. Kunakorn
............................................................................................................................... 249

Simulation and Analysis on the Initial Temperature Profiles in Soils
Xibin Ma, Baoyi Cheng, Wenjie Liu, Jintian Li
............................................................................................................................... 253

Soft Switching Interleaved Boost Converter for Photovoltaic Power Generation System
Jun-Ho Kim, Doo-Tong Jung, Jee-Hyung Kim, Su-Won Lee, Yong-Chae Jung, Chung-Yuen Won
............................................................................................................................... 257

Stability Analysis of a Non-Inverting Synchronous Buck-Boost Power Converter for a Solar Power Management System
Jaw-Kuen Shiau, Chun-Jen Cheng, Ching-En Tseng
............................................................................................................................... 263

Evaluation of Genetic Algorithm Based Solar Tracking System for Photovoltaic Panels
Syamsiah Mashohor, Khairulmizarn Samsudin, Amirullah M. Noor, Adi Razlan A. Rahman
............................................................................................................................... 269

Low Power Fuel Delivery with Programmable Concentration Control for Micro Direct Methanol Fuel Cells
Yuming Yang, Yung C. Liang, Kui Yao
............................................................................................................................... 274
Stability Analysis of Microgrids with Constant Power Loads

Duminda P. Ariyasinghe, D. Mahinda Vilathgamuwa

Leakage Current Analysis of a Single-Phase Transformer-Less PV Inverter Connected to the Grid

Lin Ma, Fen Tang, Fei Zhou, Xinmin Jin, Yibin Tong

Modeling and Fault Simulation of Photovoltaic Generation Systems Using Circuit-Based Model

Kuei-Hsiang Chao, Ching-Ju Li, Sheng-Han Ho

Fourth Order Buck Converter for Photovoltaic Maximum Power Point Tracking Applications

Veerachary Mummadi

Improved Maximum Power Point Tracking Algorithm For Photovoltaic Sources

Veerachary Mummadi

A Summary of Plane Division Maximum Power Point Tracking Methods

Hirotaka Koizumi

Designing a Wind-Diesel Hybrid Remote Area Power Supply (RAPS) System

David Edwards, Michael Negnevitsky

Soft Switched AC-Link Wind Power Converter

Anand Balakrishnan, Mahshid Amirabadi, Hamid A. Toliyat, William Alexander

Vector Control of the Brushless Doubly-Fed Machine for Wind Power Generation

Shiyi Shao, Ehsan Abd, Richard McMahon

Losses and Pulsating Torques in DFIGs with Unbalanced Stator and Rotor Excitation

S. Djurovic, S. Williamson

Interline Power Flow Controller (IPFC) Based Damping Controllers for Damping Low Frequency Oscillations in a Power System

Alivelu M. Parimi, Irraivan Elamvazuthi, Nordin Saad

Benzothiadiazole-Cored Regioregular Oligothiophenes as Building Blocks for Novel Crystalline Low Band-Gap Conjugated Polymers with Solution Processibility

Jianping Lu, Fushun Liang, Nicolas Drolet, Jianfu Ding, Ye Tao, Raluca Movileanu

Dynamic Modelling and Simulation of a Micro-Turbine Generation System in the Microgrid

Huang Wei, Zhang Jianhua, Wu Ziping, Niu Ming

A Novel Voltage-Boosting Converter with Passive Voltage Clamping

K. I. Hwu, Y. T. Yau, Y. H. Chen

Study on Microwave Radiation Pyrolysis of Biomass

Xiaoya Guo, Bo Zhou, Yong Zheng

Biogas Production From Banana Stem Waste: Optimisation of 10 L Sequencing Batch Reactor

N. Zainol, J. Salihon, R. Abdal-Rahman

Voltage Stability Enhancement Through Optimal Location of Var Compensator

M. Kowsalya, K. K. Ray, D. P. Kothari

Isolated H-Bridge VSC Based 3-Phase 4-Wire DSTATCOM for Power Quality Improvement

Bhim Singh, P. Jayaprakash, D. P. Kothari
