TABLE OF CONTENTS

Volume 1

The Increasing Pace of Climate Change ................................................................. 1
  Michael MacCracken

From Convergence to Compliance - Creating a Balanced Energy Strategy ...................... 10
  Andrew Singer

Using Your Energy Management System to Find Energy Waste .................................... 27
  Paul J. Allen, Michael J. Brennan

Deployment of Emerging Technologies to Reduce Risk for Buyers .................................. 54
  James Broderick

Design to Save ........................................................................................................... 72
  D. Mark Kelly

Insulation Investment = Energy Savings and Exceptional Financial Returns .................... 76
  Ron L. King

A Penny Saved is STILL a Penny Earned ......................................................................... 88
  Andrew Saleh

Renewable Energy Opportunities for the Army ................................................................ 108
  Amy E. Solana, Jennifer C. States, William D. Chvala Jr., Mark R. Weimar, Doug Dixon

Post Occupancy Evaluations in Federal Buildings .......................................................... 126
  Emily Ranch, Kim Fowler

EPA Water Sense Program - Every Drop Counts ............................................................ 135
  Stephanie Tanner

Beyond Toilets: How to Capture Large Water Savings at Your Facility ............................. 156
  Francis W. Wheeler

Driving Energy Management GM Approach ................................................................... 207
  Gregory M. Barrett

Monitoring Federal Facilities Energy Using Real Time Data ............................................ 226
  Shannon Burrington, John Grabowski

Energy Savings Performance Contracting with New Construction = Energy Security at
White Oak .................................................................................................................... 241
  Phillip L. Smith

Re-commissioning and Real-Time Monitoring of Energy Savings .................................... 250
  Paul F. Hutchins, Steven J. Anticknap

Climate Change and Sustainable Design: Building Energy Efficiency Policies and Outlook ......................................................................................................................... 267
  Andrew L. Goldberg

Brighter Idea Using Tri Generation Concentrated Solar Power (CSP) .............................. 292
  Michael J. Betsch

GSHPs in Historic Preservation - Restoration and renovations to the Hampton Mansion ......... 293
  Thomas H. O’Neill

Solar Energy Case Study: How to Save it For When You Need it Most .......................... 348
  Bill Wong, Larry McClung

Keys To Achieving 20% Wind by 2030 .......................................................................... 355
  Randall Swisher

Global Challenges, Local Innovative Solutions - 1 MW Photovoltaic Solar Ray .................. 361
  Sara Hammes, Letitia Webster

Volume 3

Energy Balance Using Coefficient of Performance ................................................................. 1100
  Michael Costarell

Is Outdoor Air Robbing Your Facility Blind? ................................................................. 1107
  Francisco Valentine

Two Approaches to Using Energy Recovery to Improve Over-All System Efficiency Rating ................................................................. 1113
  Klas C. Haglid

HVAC Optimization: Don’t Let the Savings Slip ................................................................. 1135
  Kevan Dean, Michael G. Loval

Performance Contracting Success with District Energy in NC DOA Raleigh ......................... 1140
  John S. Andrepont

Miami-Dade County’s Energy Conservation and District Cooling Initiatives ................................ 1163
  Michael W. Gibson, Eric B. Lawton

Small-Scale Cogeneration: Still ‘Experimental’? ................................................................. 1188
  Lindsay P. Audin

Cogeneration and Emergency Generation in Healthcare Facilities ........................................ 1207
  Peter V.K. Funk Jr.

Some Opportunities of Co-Generation in Eastern and North-Eastern India .......................... 1211

Sustainable Development Strategic Clean Energy Plan ......................................................... 1221
  Arun Jhaveri

Least-Cost Paths to Energy Independence at a Midwestern University .................................. 1235
  Lee P. DeBaillie

Industrial Energy Projects and Corporate Carbon Reduction .............................................. 1241
  Robert J. Tidona

The Role of Energy Efficiency in a Balanced Sustainability Program .................................... 1248
  Bill Younger

Achieving Sustainability in World Bank Energy Efficiency Projects: Lessons Learned ............ 1264
  Robert P. Taylor

Energy Efficiency: A Critical Path to Sustainability ............................................................. 1269
  Robert J. Dixon

The Final Frontier: Exploring the Last High User of Energy, the Data Center (DC) ............... 1289
  John P. Cilia

Peeling the (Green) Onion: What Does “Green” Really Mean for Data Center Power? .......... 1296
  David E. Perkins

IT Critical Facility Energy Engineering Challenges .............................................................. 1300
  Joseph E. Greenawalt

Tackling Today’s Data Center Energy Efficiency Challenges – A Software-Oriented Approach .... 1310
  Bill Brown, James J. Parker, Hugh Lindsay

The Role Of Integrated & Intelligent Systems In Green and Sustainable Buildings .............. 1327
  J. Christopher Larry

Sustainability Lighting Approaches ..................................................................................... 1376
  Keith R. Cook

How Lighting Can Help Energy Star Ratings ...................................................................... 1410
  Frank Austin
Ideal Task Lighting Becomes Reality! .............................................................. 1435
Donald R. Wulfinghoff

Buildings for a Sustainable Future .............................................................. 1454
Paul von Paumgartten

Automating the ENERGY STAR Submittal Process .................................. 1530
Steven D. Heinz

Realizing the Financial Benefits of Energy Improvements ......................... 1555
Neil Zobler

Successful Low Cost Energy Efficiency and Cost Control Strategies for a Rapidly Growing School District ......................................................... 1568
Philip J. Tornelli

New Hope for an Old Building .................................................................. 1582
Lonnie W. Russell

Magnaray's® Greening of Eaton’s Exterior .................................................. 1634
Lorence Leetzow

Volume 4

Top 10 Profitable “Green” Strategies ............................................................ 1648
Eric A. Woodroof

Global Cooling: Electricity Peak-Shaving Techniques to Offset Climate Change .......................................................... 1652
Richard L. Itteilag

Live It/Build It – Greening the Communities We Call Home ..................... 1760
John J. White, Dave Davidson

Enter the Chief Energy Officer – Lessons From The Evolution of the IT Industry .......................................................... 1784
David M. Speiser

How to Ride the Corporate Social Responsibility Sustainability Wave to Enhance Your Total Energy Management Program .............................................. 1791
Phillip A. Collingwood

The Benefits of Sustainability to Corporations ............................................ 1814
Monica Hale

A Systematic Approach to Analysis and Identification of Controls-Related Energy Inefficiency .......................................................... 1840
M.M. Ardehali

Pushing Your Energy Management Systems to the Limit ......................... 1847
Jeffrey R. Munn

Wireless Sensor Networks ........................................................................ 1853
Skip Ashton

Schneider Electric’s Energy Action Program Yields Big Results for Energy Reduction and Sustainability .......................................................... 1888
Edwin D. Willhite

The Green House Gas World, What an Energy Manager Needs to Know .................................................................................. 1895
John M. Avina, J.P. Maddex, Robert Urban

Building a Tradition of Sustainability at Case Western University ............. 1904
Eugene Matthews, Linda Robson

Efficient Windows Play a Major Role in the Nation’s Energy & Greenhouse Gas Performance .......................................................... 1945
Sajjad Ahmed, Mehran Arbab, Jeff Yigdall

Innovative Lighting Contest – Small Actions Add Up to Big Savings in Schools .......................................................... 1965
Michael J. Baranczewicz, John Lord
Mesopic Outdoor Lighting: Can a Light Source Tuned to How Humans See at Night Save Energy? .................................................................1974
Peter M. Morante

A Big Box Chain Store Reduces Load ..........................................................................................................................1983
David M. Ahrens

Design and Build Industrial Energy Management Systems on a Budget .................................................................1999
William G. Johnson

Implementing Carbon Dioxide Based Demand Control Ventilation .............................................................................2005
Andrew Heiligman

Busting the Myth That Green Costs More Green ........................................................................................................2011
James D. Qualk, Paul McCown

Gina Dixon

Gathering WAGES Information Wirelessly .............................................................................................................2031
Jim Lewis

Control and System Issues for a Base-loaded Grid-connected CHP Co-gen Configured for Automatic Full Load Emergency Power Back-up ..........................................................2055
James P. Coyle

How to Find and Finance Landfill Gas Energy Projects ..........................................................................................2064
Rachel Goldstein

Modeling of Buoyant Convection Air Conditioning For Process Cooling and Potential for Energy Savings ..........................................................2073
W.W. Rust

Critical: Reliable Collection of Energy ..................................................................................................................2082
Charles D. Watson

CHP Microturbine Configuration Model and Economic Analysis ...............................................................................2088
Sezgin ?AH, M.Handan

A Closed Loop High Efficiency Plasma Waste-To-Power Generation Model ..........................................................2093
Ransford R. Baidoo, F. Ferguson, H. Singh

Investigation of a Storage Facility Needed for the System Integration of a Wind Generator ...........................................2098
Bálint Hartmann

Integrated System Optimization through Continuous Commissioning: A Case Study ..............................................2105
Ke Xu, Gang Wang, Zhan Wang, Mingsheng Liu

Continuous Commissioning Energy Management Case Study of an Outpatient Clinic Building ......................................2114
Lixia Wu, Mingsheng Liu, Wei Ruan

A GIS Method for Estimating the Carbon Footprint in Municipal Water and Wastewater in Fairfax County, Virginia ..........................................................2121
Ali A. Bakhshi,

Wind Turbine – Hydrogen Hybrid System .............................................................................................................2129
Ádám Hornos

Understanding the Crux of Energy Tax Credits as it Relates to the Energy Policy Act of 2005 ........................................2138
Julio P. Gonzalez

Free Cooling Using Water-Side Economizer for Process Cooling at a Plastic Extrusion Plant ......................................2165
Mohamad Wathaifi
