TABLE OF CONTENTS

VOLUME 1

Optimal and Suboptimal Smoothing Algorithms for Identification of Time-Varying Systems with Randomly
Drifting Parameters .................................................................................................................. 1
Maciej Niedziwkezi

Semi-Physical Neural Network Model in Detecting Engine Transient Faults Using the Local Approach .............................................................. 7
Xun Wang, Neil McDowell, Uwe Krager, Geoffrey McCullough, George W. Irwin

Transparent Bilateral Control Architecture by State Convergence for Telerobotics ...................................................................................... 12
Jose M. Azorin, Rafael Aracil, Jose M. Sabater, Carlos Perez, Nicolas M. Garcia

Frequency Domain Approach to Computing Loop Phase Margins of Multivariable Systems ............................................................................ 18
Zhen Ye, Qing-Guo Wang, Chang Chieh Hung, Yu Zhang, Yong Zhang

Guaranteed Dominant Pole Placement with PID Controllers .................................................................................................................. 23
Qing-Guo Wang, Zhiping Zhang, Karl J. Astrom, Yu Zhang, Yong Zhang

Neuro Sliding-Mode Control of Engine Torque ................................................................................................................................. 27
Ting Huang, Derong Liu, Hossein Javaherian, Ning Jin

Tuning of PID-Controller Based on the External Disturbance Spectrum .................................................................................................. 33
Andrey Torgashov

Extended Moore-Spence Equations Based Reduced Method for Computing Bifurcation Points of Power System Model .................................................................................................................. 39
Yunqian An, Qinglong Zhang, Qin Li, Daqing Zhang, Xiao-Dong Duan, Meng Zhang

Qing-Shan Jia, Qianchuan Zhao

On the Use of Sparse Representations in the Identification of Line Spectra .................................................................................................. 51
Jean Jacques Fuchs

Stabilizing Multimachine Systems with Decentralized and Nonlinear Feedbacks ............................................................................................. 56
Jun Zhou, Yasuharu Ohsawa

Control Problems in Antiangiogenic Therapy - Comparison of Six Models .................................................................................................. 62
Andrzej Swierniak

A Sparse Representation Criterion: Recovery Conditions and Implementation Issues .......................................................................................... 68
Jean Jacques Fuchs

Control of a Five-Degrees-Of-Freedom Nanopositioner ................................................................................................................................. 73
Jing-Chung Shen

Adaptive Vision-Based Controller for Small Rotorcraft UAVs Control and Guidance .......................................................................................... 79
Farid Kendoul, Isabelle Fantoni, Rogelio Lozano

Constrained Controllability of Second Order Semilinear Systems .................................................................................................................. 85
Jerzy Klamka

Control System Design for a New Servo Press ............................................................................................................................................... 91
Wai Keung Yeung, Jian Ping Li, Kai He, Yuanxin Luo, Ching Tom Kong, Ruxu Du

Global Discrete Time Stabilization of the PVTOL Aircraft Based on Fast Predictive Control.......................................................................... 97
Ahmed Chemori, Nicolas Marchand

An Improved Algorithm for the Design of Testable Subsystems .................................................................................................................... 103
Stephane Ploix, Abd Abraham Yassine, Jean-Marie Flaux

Structural Approach for Sensor Placement with Diagnosability Purpose .................................................................................................. 109
Abd Abraham Yassine, Stephane Ploix, Jean-Marie Flaux

Testing the Covariance Matrix of the Innovation Sequence in Application to Aircraft Sensor Fault Detection .................................................. 115
Ching-Hong Hsieh

On the Estimation of Atmospheric Turbulence Layers ................................................................................................................................... 121
Alessandro Beghi, Angelo Cenedese, Andrea Masiello

Non-Parametric Adaptive Estimation of a Multivariate Density .................................................................................................................... 127
Vyacheslav Vasiliev

Adaptive Sliding Mode Attitude and Vibration Control of Flexible Spacecraft under Unknown Disturbance and Uncertainty .................................................................................................................. 133
Qinglei Hu

A Discrete-Time Adaptive ILC for Systems with Random Initial Condition and Iteration-Varying Trajectory .................................................... 139
Ronghu Chi, Shulin Sui, Lei Yu

Detection of Critical Driving Situations Using Phase Plane Method for Vehicle Lateral Dynamics Control by Rear Wheel Steering ................................. 145
Anne Von Vietinghoff, Haiyan Lu, Uwe Kiencke
Asymptotic Stability of Hierarchical Inner-Outer Loop-Based Flight Controllers ................................................................. 151
Farid Kendoul, Isabelle Fantoni, Bogelio Lozano

PID Controllers for Robots Equipped with Brushed DC-Motors Revisited ........................................................................... 157
Victor M. Hernandez-Guzman, Victor Santibanez, Roberto Valentin Carrillo-Serrano

Design of Piecewise Linear LQ Control for Linear Systems with Rate Satuations Using LMI Optimization .............................. 163
Noriyuki Akiyama

LMI Based Stabilization of a Class of Switching LPV Systems ..................................................................................................... 169
L. Jeno, Valentina Orsini

Sampled-Data Networked Control Systems with Random Time Delay .................................................................................. 175
Chih-Chung Chen, Sandra Hirsch, Martin Bus

A Dual Mode MPC Scheme for Nonlinear Processes .................................................................................................................. 181
Luisa Paulina Gutierrez, Darci Olosook, Oscar Sotomayor, Hernan Alvarez

Fast and Accurate Modeling of Distributed RLC Interconnect and Transmission Line in Time and Frequency Domains .......... 187
Sheng-Guo Wang, Ben Wang

On the Completeness Problem for Fractional Rationals with Incommensurable Differentiation Orders ......................................... 193
Huseyin Acary, Rachid Malti

Affine Parameterization of Cascade Control with Time Delays .................................................................................................. 198
Pavel Zieck, Vladimir Kacera, Tomas Vyhlidal

Robust H-Infinity Control for Neutral Uncertain Switched Nonlinear Systems using Multiple Lyapunov Functions ................ 204
Li-Li Li, Georgi Marko Dimirovski, Jun Zhao

Spatial Periodic Adaptive Control for Rotary Machine Systems .................................................................................................. 210
Juan-Xin Xu, Deqing Huang

Personalized Use Models in Ambient Intelligence Environments .................................................................................................. 216
Daniel Gorlich, Nancy Thiels, Gerrit Meixner

Least Restrictive Move-blocking Model Predictive Control ......................................................................................................... 222
Ravi Gondhalekar, Jun-Ichi Imura

Using the Unscented Kalman Filter and a Non-Linear Two-Track Model for Vehicle State Estimation ........................................... 228
Konrad Reif, Kerstin Renner, Martin Suenger

Wind Evaluation Breadboard Control Architecture, Dynamic Model and Performance .............................................................. 234
Teodora Aleida Viera Carbello, Pablo Zulanga, Marcos Reyes, Miguel Nunez, Fco. Javier Castro Lopez-Tarruella

Strong Practical Stability and Stabilization of Uncertain Discrete Linear Repetitive Processes .................................................. 240
Pawel Dabkowski, Krzysztof Galkowski, Eric Rogers, Anton Kimmert

H2 and H Infinity Filtering of Discrete-Time Markov Jump Linear Systems through Linear Matrix Inequalities .............................. 246
A. R. Fioravanti, Alim P. C. Goncalves, Josse C. Geromel

Identifiability of Variable Coefficients for Vibrating Systems by Boundary Control and Observation in Finite Time Duration ...... 252
Bao-Zhu Guo, Jin-De Chang

A Fix-Up for the EKF Parameter Estimator ................................................................................................................................. 258
Don Wiberg, Sevon Oh, Jung Su Youn, Luke Johnson, Suk Kyo Hong

Applications of Random Parameter Matrices Kalman Filtering in Uncertain Observation and Multi-Model Systems ..................... 264
Dandan Luo, Yunmin Zhu

Robust Decentralized Data Fusion Based on Internal Ellipsoid Approximation ......................................................................... 270
Yan Zhou, Jianxun Li

Optimal Hierarchies in Firms: A Theoretical Model ........................................................................................................................ 276
Mikhail Goubko, Sergey Mishin

On-Line Estimation of Wind Turbine Power Coefficients Using Unknown Input Observers ......................................................... 282
Peter Fogh Osgaard, Rasmus Nielsen, Chris Damgards

Development and Application of an Integrated MPC Technology .................................................................................................. 288
Yucui Zhu, Zehua Xu, Jun Zhao, Kai Han, Jixin Qian, Weixin Li

Team Building under Pareto Uncertainty ................................................................................................................................... 294
Dmitry Novikov

An Order-Based Approach to Mission-Oriented Autonomous Robot Control: Managing Complexity, Merging Multiple Plans, and Performance Analysis Given Partial Probabilistic Information ................................................................. 300
Keiyou Li, Raffaello D’Andrea

Asymptotic Sensitivity Properties of Davison Type Integral Controllers for Time-Delay Plants .................................................. 306
Tadashi Ishihara, Liang An Zheng, Hai-Jiao Guo

Development of a Flexible and Agile Multi-Robot Manufacturing System .................................................................................. 312
Satoshi Hoshino, Hiroya Seki, Yuji Naka

Recursive Identification of EIV ARMA Processes .......................................................................................................................... 318
Han Fu Chen

A Performance Comparison of an EKF and a High Gain Observer for an Electropneumatic Positioning System: Simulation and Practical Results
Zhiping Qu, Minh Tu Pham, Mohamed Smouai, Daniel Thomasset

Improving Transient Behavior of MIMO Adaptive Systems
Marcos Ferreira Duarte Pinto, Ramon R. Costa

On-Line Optimizing Control for a Class of Batch Reactive Distillation Columns
Sandra Perez-Correa, Pablo Gonzalez, Jesus Alvarez

Componentwise Stabilization of Interval Systems
Octavian C. Pastravanu, Mihaela-Hanako Matevschi

A Closed-Loop Artificial Pancreas Based on MPC: Human-Friendly Identification and Automatic Meal Disturbance Rejection
Hyunjin Lee, B. Wayne Bequette

Determination of Macroscopic Reaction Schemes: Towards a Unifying View
Philippe Bogaerts, Marianne Roosman, Vincent Vastmans, Alain Vande Wouwer

Prediction of Power Demand for Hybrid Vehicles Operating in Fixed-Route Service
Ralf Bartholomeus, Matthias Klingner, Martin Lehner

Model-Based Fault Diagnosis of a NOx Aftertreatment System
Pierluigi Pisac, Marcello Canova, Ahmed Soliman

Identification of Errors-In-Variables Models Using the EM Algorithm
Jaafar Almutawa

Control and Systems Approaches to Atomic Force Microscopy
Pranaw Agrawal, Muri V. Salapaka

Optimal Linear Quadratic Regulator for Markovian Jump Linear Systems, in the Presence of One Time-Step Delayed Mode Observations
Ion Matei, Nuno C. Martins, John S. Baras

Approximations for State Estimation in a Plane Using Two Two-Axis Accelerometers
Edward Boje
Controllability and Observability of Linear Discrete-Time Systems with Network Induced Variable Delay .................................................. 14010
Catalin Cosmin Ionete, Arben Cela, Mongi Ben Gaid, Abdelatif Reama

Optimal Estimation and Regulator: Risk-Sensitive Method, for Systems of First Degree ................................................................. 14016
Maria Aracela Alcorta Garcia

Framework for Reliability Evaluation of Networked Control Systems ..................................................................................... 14022
Rony Ghosh, Jean-Marc Thiriet, Jean-François Aubry, Michel Robert

Experimental Comparison of Methods for Multivariable Frequency Response Function Estimation ................................................ 14028
Erik Wernhals, Stig Moberg

Modeling the Temporal Evolution of the Drosophila Gene Expression ...................................................................................... 14036
Alexandre Haye, Yves Dehouck, Jean-Marc Kwastgroch, Philippe Bougault, Marianne Rooman

Adaptive Rollover Prevention for Automotive Vehicles with Differential Braking ................................................................. 14042
Selim Solnaz, Mehmet Akar, Robert Shorten

Resistance Risk Management in HIV Therapy Switching with Explicit Quiescent T-Cell Modeling ................................................ 14048
Ruan Zurawowski, Buituo Luo

External Force Assisted Nanorobotic Assembly of 3-D Helical Nanobelts .................................................................................. 14054
Gilgung Hwang, Lorenzo Bagatti, Hideki Hashimoto

Relay-Stabilization and Identification of Unstable Processes ........................................................................................................ 14060
Tomas B. Co

Target Problems under State Contraints for Anisotropic Affine Dynamics - a Numerical Analysis Based on Viability Theory ...... 14065
Eva Cruck

Delay-Dependent Stability Criteria for Markovian Switching Networks with Time-Varying Delay .................................................. 14071
Sivapragaumathanathan, Carlos Beane, Lee H. Keel

Stability and Performance of Model-Based Networked Control Systems with Intermittent Feedback ............................................... 14077
Tomas Estrada, Panos J. Antsaklis

Boundary Stabilization of Marine Structure ................................................................................................................................. 14083
Tu Duc Nguyen

A Novel Clustering Method for Quick Partial Volume Estimation in MR Brain Images ............................................................... 14089
Laszlo Szilagyi, Sandor Miklos Szilagyi, Balazs Benyo, Zoltan Benyo

Centralized & Decentralized Temperature Generalized Predictive Control of a Passive-HVAC Process ........................................... 14095
Biao Biao, Rousseau Tawegoum, Ahmed Rachid, G Chasseurias

An Implementation Environment for Automated Manufacturing Systems ............................................................................... 14101
Ricardo Alexandre Digio, Carlos Alberto Vicari, Eduardo Rocha Lourec, Marco Antonio Barroso, Eduardo Alves Pio Povel Santos

Improved Intensity Inhomogeneity Correction Techniques in MR Brain Image Segmentation ........................................................ 14107
Laszlo Szilagyi, Laszlo David, Sandor Miklos Szilagyi, Balazs Benyo, Zoltan Benyo

Urban Traffic Control Problem: A Game Theory Approach ........................................................................................................... 14113
Israel Alvarez, Alexander S. Poznyuk, Alejandro Malo

Computational Approaches to Human Arm Movement Control - A Review .................................................................................. 14119
Francisco M. M. O. Campos, J. M. F. Calado

Implementation of Optimal Decisions in the Presence of Uncertainty .............................................................................................. 14127
Tilm Ariz, Harvey Arelano-Garcia, Gunter Wozny

Efficient Low-Cost Controllers for Constrained Manipulators Affected by Uncertainties and Disturbances .................................. 14133
Santiago Torres, J. A. Mendez, L. Acosta, Evelio Gonzalez, Jonay Toledo

Distribution-Dependent Robust Linear Optimization with Asymmetric Uncertainty and Application to Optimal Control ................. 14139
Ioannis Paschalidis, Seong-Choel Kang, Keyong Li

Verification and Validation Integrated within Processes Using Model-Based Design ................................................................. 14145
Chris Hayhurst, Brett Murphy, Richard Anderson, Couroude Mohtadi, Jon Friedman, Pieter Mosterman

Teaching Digital Controllers for Finite Settling Time by Using Model-Based Control Education (MBCE) in a Constructivist Framework ........................................................................................................ 14151
Adriaan Gunther

Dual EKF State and Parameter Estimation in Multi-Class First-Order Traffic Flow Models ......................................................... 14157
Hans Van Lint, Andreas Hegyi, Serge P. Hoogendoorn

A Robust Model Predictive Control Algorithm with a Reactive Safety Mode ............................................................................. 14163
John M. Carson, Rehmet Ackmon, Richard M. Murray, Douglas G. Macmynowski

Multi-UAV Cooperative Fault Detection Employing Vision Based Relative Position Estimation ................................................... 14170
Guillermo Horenda, Fernando Caballero, Ivan Maza, Luis Merino, Antidio Vargas, Anibal Ollero Ollero

Learning and Adaptation of Skills in Autonomous Physical Agents .......................................................................................... 14176
Sandor M Veres, Aron Gabor Veres

TraSer: An Open-Source Solution Platform for Cross-Company Transparency in Tracking and Tracing .............................................. 14182
Laszlo Monostori, Elizabeta Ilie-Zudor, Marcell Szathmari, Zsolt Kemeny
Robust Landmark Detection and Localization: A Multisensor Approach
Dilan Amarasinghe, George K. I. Mann, Raymond G. Gosine

Improved Training of an optimal Sparse Least Squares Support Vector Machine
Xiao Lei Xia, Kang Li, George W. Irwin

Integral Nested Sliding Mode Control for Robotic Manipulators
Luis Enrique Gonzalez-Jimenez, Alexander G. Loukianov, Eduardo Jose Bayro-Corrochano

Design of ISS-Lyapunov Functions for Discrete-Time Linear Uncertain Systems
David Munoz De La Pena, Teodoro Alamo, Mircea Lazar, Maurice Heneeleh

Dynamic Object Identification by a Moving Robot Using Laser Data
Dilan Amarasinghe, George K. I. Mann, Raymond G. Gosine

Stabilization for a Class of Nonlinear Systems: A Fuzzy Logic Approach
Stefano Di Gennaro, Bernardo Castillo-Toledo

SLAM and Data Fusion from Visual Landmarks and 3D Planes
Aymen Zareiki, Michel Devy

Plug-In Robust Compensator for a 3 DOF Piezoelectric Nanorobotic Positioner
Abdoulaye Fall, Moussa Boukhmilif, Antoine Ferreira

Direct and Indirect Stable Adaptive Control for Suspension Systems with MR Damper
Ithisek Niklhamhang, Tomoaki Mori, Akira Sano

ARTIST: A Distributed Remote Control Lab
Michele Basso, Marco Romagnoli, Giacomo Innocenti

Forecasting of Electricity Price and Demand Using Auto-Regressive Neural Networks
Daiki Yamashita, Aishah Mohd Isa, Ryuichi Tokayama, Takashide Nishima

New Approaches to Control Education
S. Mitra Mitra, Lee H. Keel, Shankar P. Bhattacharyya

A Variant to Naismith's Problem with Application to Path Planning
Erik L Verriest

Two-Input Two-Output Laboratory-Scale Temperature System Based on Peltier Modules
Pericles R. Barros, George Acidi Junior, Joao Batista Morais

Wireless Distributed Architecture for Therapeutic FES: Metrology for Muscle Control
Michael Tounsva, David Andreu, Philippe Pratte

Observer Forms for Perspective Systems
Ola Dahl, Yebin Wang, Alan Francis Lynch, Anders Heyden

Robust Control of Resistive Wall Modes in Tokamak Plasmas Using Mu-Synthesis
Joseph Daley, Eugene Schuster, D. A. Humphreys, Michael Walker, Yongkyoon Im, Jin-Soo Kim

Optimal Power System Stabilizer Tuning in Multi-Machine System Via an Improved Differential Evolution
Guang Ya Yang, Yuteendra Mishra, Zhao Yang Dong, Kit Po Wong

Optimal Trajectories for Homing Navigation with Bearing Measurements
Adrian Bishop, Purbuda N. Pathrana

Decentralized Output Feedback Control of Interconnected Systems Using Low Gain-High Gain Feedback
Michael Frye, Chunjiang Qian, Richard Colgren, Seyoung Oh

A Hybrid Predictive Control Scheme for Hygrothermal Process
Gustavo Henrique Da Costa Oliveira, Luiz Henrique Ushijima

MIMO Frequency Domain Iterative Tuning for Tracking Control
Jian Luo, Sandor M Veres

Strong Stabilization of a Non-Uniform SCOLE Model
Xiaowei Zhao, George Weiss

Regulation of Volatile Fatty Acids and Total Alkalinity in Anaerobic Digesters
Bernardo Palacios-Ruiz, Hugo Oscar Mendez-Acosta, Victor Alcaraz-Gonzalez, Victor Gonzalez-Alvarez, Carlos Pelayo-Ortiz

Interval-Based Diagnosis of Biological Systems - Application to an Anaerobic Digestion Pilot Plant
Ruben Horacio Lopez-Banuelos, Victor Alcaraz-Gonzalez, Jean-Philippe Steyer, Hugo Oscar Mendez-Acosta, Victor Gonzalez-Alvarez, Carlos Pelayo-Ortiz

A Nonlinear Observer for a Fishery Model
Aboudramane Goura, Abderrahmane Iggidir, Dione Ngom, Hamidou Touré

Fuzzy Compensation of Power-Voltage Interaction in a Combustion Turbogenerator
Isaura Hernandez-Rodriguez, Raúl Garduno-Ramírez, Carlos Daniel García-Beltrán

Stabilization of Switched Discrete-time Systems with Time-Varying Delay
Valter J. S. Leite, Marcio Fantini Miranda

Neural Networks to Predict Protein Stability Changes Upon Mutation
Aline Grosfils, Yves Dehouck, Dimitri Gilis, Marianne Roosman, Philippe Bogaerts

Systems Analysis of the Insulin Signaling Pathway
Eric Kwei, Kevin Sanft, Linda Petzold, Francis Doyle
Distributed Control with Dynamic Integral Quadratic Constraints ................................................................. 14370
  Hai Fung, Panos J. Antsaklis
Transfer Matrix Approach to the Triangular Decoupling of General Neutral Multi-Delay Systems ................ 14377
  Fotis N. Kiamouhitis, George Panagiotakis
A Hybrid Systems Approach to Closed-Loop Navigation of Electromagnetically Actuated Satellite Formations 14385
  Umair Abun, David W. Miller, Shakil Ahmed
Geometric Analysis of a Class of Constrained Mechanical Control Systems in the Nonzero Velocity Setting 14390
  Jason Nightingale, Richard Hind, Bill Goodwine
Sum of Roots Characterization for Parametric State Feedback H Infinity Control ........................................... 14396
  Masaki Kanno, Shinji Hara
Freeway Traffic Management Using Linear Programming .................................................................................. 14402
