# TABLE OF CONTENTS

The Systemic Effects of Fatigue on Military Operations .......................................................... 1  
C.W. Johnson  

Human Factors Engineering of Interfaces-connecting Control Centres .................................. 7  
L.M. Collis  

Assurance Levels for ATM Elements: Human (HAL), Operational Procedure (PAL), Software ....................................................................................................................... 13  
P. Mana, J.-M. De Rede, and D. Fowler  

Negligible Risk for European Railway Risk Assessments ......................................................... 20  
S.-L. Kurz and B. Milius  

Acceptable Residual Risk - Principles, Philosophies and Practicalities ............................... 26  
A.J. Rae  

Putting Risk Into Context ........................................................................................................ 32  
M. Brownsword and R. Setchi  

Model-based Framework for Addressing Diversity, Usability and Reliability for Safety Critical Interactive Systems .................................................................................................. 38  
D. Navarre, P. Palanque, and J.-F. Ladry  

Planning for Cost Effective Human Factors Engineering and System Safety .................... 44  
C.J. Ives  

Validation and Verification Techniques for EMC for Functional Safety ............................... 49  
E.K. Armstrong  

Study on Risk Assessment and Control of Ship Safety Navigation ....................................... 55  
Fang Quangen, Hu Shenping, and Xi Yongtao  

The Dangers of Failure Masking in Fault-tolerant Software: Aspects of a Recent In-flight Upset Event ........................................................................................................... 60  
C.W. Johnson and C.M. Holloway  

EP2002 - Distributed Brake Control System ........................................................................... 66  
S. Albert  

Software Safety Assurance Process for Railway Platform Software .................................... 72  
S. Patra  

The Normal Operations Safety Survey (NOSS): Measuring System Performance in Air Traffic Control .................................................................................................................. 78  
C. Henry  

Harmonised Risk Acceptance Criterion for Technical Systems in European Railways .......... 84  
J. Braband  

A Comparison of the Role of Degraded Modes of Operation in the Causes of Accidents in Rail and Air Traffic Management ................................................................. 89  
C.W. Johnson and C. Shea  

Certification of Object Oriented Programs ............................................................................ 95  
R.K. Dewar and C. Coma  

Safety Process Improvement: Early Analysis and Justification ............................................ 100  
D. Mannering, J.G. Hall, and L. Rapanotti
Hazard Analysis for Programmable Automotive Systems ................................................................. 106
  P.H. Jesty, D.D. Ward, and R.S. Rivett

Review of the Use of the Department for Transport Value for Preventing a Fatality in Non Road-transport Systems ........................................................................................................ 112
  R. Maguire

Practical Experiences in Upgrading and Standardising the Safety & Environmental Systems (SEMS) for the RN Marine Power & Propulsion Systems Division .................................................................................................................. 118
  J.P. Olivier and C. Blake

Integrated Safety Strategy to Model Driven Development with SysML ........................................... 124
  M.C. Hause and F. Thom

A Case Study of the Application of BS:EN 61508 in Electrical Power Generation ......................... 130
  P.M. Wyman

The Who, Where, How, Why and When of Modular and Incremental Certification ......................... 135
  J.L. Fenn, R.D. Hawkins, P.J. Williams, T.P. Kelly, M.G. Banner, and Y. Oakshott

Pedestrian Behaviour and Safety in the Presence of Guard Railing .................................................. 141
  Pengjun Zheng, R. Hall, and M. McDonald

Energise Or De-energise to Trip? ...................................................................................................... 147
  A.G. Foord and C.R. Howard

Formalised Implementation of Safety Related HW/SW Architectures in Compliance with Functional Safety Requirements ................................................................................................. 153
  J. Berthing and T. Maier

Combining Security and Safety Principles in Practice ................................................................. 159
  T.J. Cockram and S.R. Lautieri

Penetrating the Fog of Safety Assessment - and Vice Versa ............................................................. 165
  D. Fowler and S.P. Grand

Tailoring a Generic BBN Model for the Quantitative Safety Analysis of Complex Systems .............. 175
  R. Greenberg and S.C. Cook

Railway Safety Risk Assessment Using FRA and FAHP Approaches - a Case Study on Risk Analysis of Shunting at Waterloo Depot ................................................................. 181
  Sheng Huang, Min An, Yao Chen, and C. Baker

Explosives Safety - an Oxymoron? .................................................................................................. 187
  C. Marriott

Practicality of Implementing Risk Based Protection System Design to Vendor Packages in the Petrochemical Industry ................................................................. 194
  J. Virdee

RAMS Program for Electromechanical Systems of Railway Applications ........................................ 200
  Z. Vintr and M. Vintr

Worst-case Software Safety Level for Braking Distance Algorithm of a Train .................................... 206
  S. Patra

Radiological Pollution Monitoring Using Composite Sampling ....................................................... 211
  N.S. Lane

The Use of Goal Structuring Notation As a Method for Ensuring That Human Factors is Represented in a Safety Case ................................................................. 217
  K.J.N. Rich, H. Blanchard, and J. McCloskey
A Review of Automotive Human Machine Interface Technologies and Techniques to Reduce Driver Distraction ........................................................................................................ 223
C.A. Pickering, K.J. Burnham, and M.J. Richardson

Good Automated Safety Practice ........................................................................................................................................................................... 229
J. Beresford

A Look at Aircraft Accident Analysis in the Early Days: Do Early 20th Century Accident Investigation Techniques Have Any Lessons for Today? ........................................................................................................ 235
C.M. Holloway and C.W. Johnson

System Safety Process and Design Process in Road Tunnel Control Systems ......................... 241
A. Mahdmina, M. Kolat, M. Frazer, and R. Williams

Safety Case Depictions vs. Safety Cases - Would the Real Safety Case Please Stand Up? .................................................................................................................. 245
I. Habli and T. Kelly

Risk of Trust in Safety: Confidence Games ......................................................................................... 249
M. Felici

Dynamic Lifecycle System Integrity Management (DLSIM) by Use of Layers of Degradation Analysis (LODA) .................................................................................................. 253
I.K. Ramsay-Connell
