2009 20th International Zurich Symposium on Electromagnetic Compatibility

Zurich, Switzerland
12-16 January 2009
# TABLE OF CONTENTS

Modeling and Calculation of Electromagnetic Field in the Surroundings of a Large Power Transformer ............................................................ 1  
L. Strac, F. Kelemen, D. Zarko

Design of a Test Vehicle for Nanowire Characterization for Signal Integrity Applications ............................................................ 5  
Giulio Antonini, M. Di Clerico, Antonio Orlandi, E. Palange, V. Ricchiuti, M. Passacantando, S. Santucci

Contribution of Impedance Imperfection of the T-Type ISNs in Measurement Uncertainty of Conducted Disturbances .................................... 9  
Jan Sroka

Two Antennas for Differential Mesoband Operation .......................................................................................................................... 13  
Carl E. Baum

Multi Band Noise Mitigation in PWR/GND Plane Pairs by Using a 2D EBG Structure with Square Patches and Meander Lines ................. 17  
A. Ciccomancini Scogna, Antonio Orlandi

Efficient Analysis of Electromagnetic Fields Near Lightning Channel by Using SIBC in FDTD ........................................................................ 21  
Jie Liu, Duo Chen, Jihuan Tian, Yun Xu, Jiansheng Yuan

Proposition of Tolerance Requirements Adapted for the Calibration of a Reverberation Chamber ........................................................................ 25  
Christophe Lemoine, Philippe Besnier, M'hamed Drissi

Proposal of a Novel EMI Diagnostic System Using Independent Component Analysis ........................................................................ 29  
Masao Masugi, Norihito Hirasawa, Ryuichi Kobayashi, Kimihiro Tajima, Hiroshi Yamane

Different Strategies for Circuit Characterization of Power Delivery Networks .................................................................................... 33  
Giulio Antonini, Antonio Orlandi, R.M. Rizzi

Transient Analysis of Nano-Interconnects .......................................................................................................................... 37  
Giulio Antonini, Antonio Orlandi, Leo Raimondo, Fabrizio Ruscitti

Audio Test Setup for EMC Interference Assessment by Listeners ............................................................................................. 41  
Wolfgang Wegst, Jan Waldmann, Achim Enders

Applications of the Dirichlet-to-Neumann Boundary Operator in Transmission Line Modeling .................................................................................. 45  
Thomas Demeester, Daniel De Zutter

Power-Bus Modeling Using 2D-Integral-Equation Formulation ............................................................................................. 49  
Martin Stumpf, Oliver Kroning, Marco Leone

A Method for Efficient Computation of Time Domain Surface Impedances of a Lossy Half Space ........................................................................ 53  
Qingsheng Zeng

Analysis of Air Pressure Reduction Caused by Electrode Speed in Short Gap Electrostatic Discharge (ESD) .............................................................. 57  
Fangming Ruan, Dan Shi, Feng Zhou, Yougang Gao, Rongfeng Linghu

The Excitation of Balanced Transmission Line Modes in Bulk Current Injection Measurements ........................................................................ 61  
James McLean, Robert Sutton
A New Calibration Method for an Electric-Field Probe Using TEM Waveguides
Shinobu Ishigami, Masayuki Hirata

Crosstalk Cancellation of DDR3 Memory Channel for Over 1600 Mbps Data Rate
Junwoo Lee, Sungwoo Han, Hyo Seog Ryu, Sang Yeop Kim, Jongho Kang, Kunwoo Park, Joongsik Kih

Mode-Port-Network Approach to Analyze Power-Line EMC Problems for PLC
Yoshio Kami, Fengchao Xiao, Kimitoshi Murano

Numerical Investigation of the Impact of Dielectric Components on Electromagnetic Field Distributions in the Passenger Compartment of a Vehicle
A.R. Ruddle, H. Zhang, L. Low, J. Rigelsford, R.J. Langley

A Radiation Model of Three-Phase Induction Machines
Francesco Della Torre, Adriano P. Morando

A Distributed-Constants Model of Three-Phase Induction Drives for Conducted Emission Studies
Francesco Della Torre, Sonia Leva, Adriano P. Morando

Simplification Method for the Assessment of the EM Response of a Complex Cable Harness

Fast Assessment of Antenna-PCB Coupling in Mobile Devices: A Macromodeling Approach
S. Grivet-Talocia, M. Bandinu, Flavio G. Canaverio, I. Kelander, P. Kotiranta

Field Uniformity Investigation of Reverberation Chamber at Calibration Stage
Bo Zhang, Wei Li, Xiaopeng Li, Zhiyong Yuan, Jinliang He, Rong Zeng

Susceptibility of PMOS Transistors Under High RF Excitations at Source Pin
Ognjen Jovic, Uwe Sturmer, Wolfgang Wilkening, Adrijan Baric, Christian Maier

Identification of Overhead Lines Using Measurements of the Electric Field Strength
C. Henze, H. Bauer

Induced Noise in a Telephone Circuit: A Monte Carlo Approach
Giovanni Lucca

Evaluation Method of Anisotropic Absorber Panel at Microwave Frequencies
Shinnichiro Yamamoto, Yoshiaki Takae, Kennichi Hatakeyama

Isolation Effect Between DC supply Voltage Signal Lines in Wireless LAN Module
Jong In Ryu, Dongsu Kim, Jun Chul Kim

Influence of Automotive Harnesses on Conducted Emissions
Heinz Rebholz, Stefan Tenbohlen

Conductive EMI Noise Measurement for Switched Reluctance Drive
Hao Chen, Lingguo Cheng, Xiaohui Qiu, Yang Zhao

Effect of a Cochlear Implant on the SAR Distribution of the Head Exposed to 2.4 GHz
Marta Parazzini, Federica Sibella, Paolo Ravazzani

Modelling Approaches Taking into Account the Vehicle's Environment in the Development of Embedded RF Receivers
Raed El-Makhour, Francois de Daran, Frederic Lafon, M’hamed Drissi, Erwan Fourn

Signal Integrity Ensured Through Impedance Characterization of Advanced High-Speed Design
Alexandre Amedeo, Cyril Gautier, Francois Costa, Laurent Bernard
Development of a Low EMI Micro-Controller Package for Automobile Applications .................................................. 141
Yuichi Mabuchi, Atsushi Nakamura, Aya Ohmae, Takanori Uno, Koji Ichikawa, Hiroshi Mizuno

Cavities' Identification Algorithm for Power Integrity Analysis of Complex Boards .............................................. 145
S. Cicerone, Antonio Orlandi, B. Archambeault, S. Connor, J. Fan, J.L. Drewniak

Analysis of SAR and Current Density in Human Tissue Surrounding an Energy Transmitting Coil for a Wireless Capsule Endoscope .......................................................................................................................... 149
Kenji Shiba, Naoya Higaki

Coupling on Cables in an Electrically Large Cavity: A Theoretical Approach ..................................................... 153
I. Junqua, J.-P. Parmantier, P. Degauque

The Malfunction and Immunity Limit of Information Technology Equipment Under HPEM Environments .......................................................................................................................................................... 157
Hidenori Sekiguchi, Shinji Seto, Ikuya Minematsu

Research on Calculation Method of Ion Flow Field Under Multi-Circuit HVDC Transmission Lines .................. 161
Wei Li, Bo Zhang, Jinliang He, Rong Zeng, Shuiming Chen

Including Stripline Connections into Network Parameter Based Via Models for Fast Simulation of Interconnects .......................................................................................................................................................... 165
Renato Rimolo-Donadio, Heinz-Dietrich Bruns, Christian Schuster

Substrate Batch Effect in GaAs MESFET Under Ultra-Short Pulses ........................................................................ 169
A.M. Bobreshov, I.S. Korovchenko, V.A. Stepkin, G.K. Uskov

Assessment of Equivalent Noise Source Approach for EMI Simulations of Boost Converter ............................. 173
Vuttipon Tarateeraseth, I.A. Maio, Flavio G. Canavero

EMC-Influences on Digital Broadcasting Services in Vehicular Environments ...................................................... 177
Niels Koch

Electric-Field Vector Measurement with Fiber-Mounted Electro-Optic Probe .................................................... 181
Hiroyoshi Togo, Shoji Mochizuki, Naoya Kukatsu, Tadao Nagatsuama

Discussions About Automotive Application of the "Equivalent Cable Bundle Method" in the High Frequency Domain .......................................................................................................................................................... 185
Guillaume Andrieu, Solange Bertuol, Xavier Bunlon, J.-P. Parmantier, Alain Reineix

Interactions Between Vias and the PCB Power-Bus .................................................................................................. 189
Gerd Heinrich, Stefan Dickmann

Study on the Characteristics of S_21 and EMI on a Shifted Electromagnetic Band Gap (EBG) Structure .................. 193
Shigeo Nara

Monitoring of Static Magnetic Field and Variable Electromagnetic Fields in a Large Magnetic Fusion Plasma Experimental Facility .................................................................................................................................................. 197

Induction Characteristics of a Solar Cell on the Ground Plane from Radiated Electromagnetic Disturbances ......................................................................................................................... 201
Masakazu Tomisawa, Masanori Tokuda

Characterization of On-Chip Interconnections and Capacitive Coupling Effect on CMOS Operational Amplifier .................................................................................................................................................. 205
Yujeong Shim, Junso Pak, Andrew Kim, Joungho Kim

Test Device for Radiated Immunity Tests .................................................................................................................. 209
Ralf Heinrich, Holger Streitwolf, Lothar Dallwitz, Uwe Karsten
Chip Level Techniques for EMI Reduction in LCD Panels .............................................................. Min-woo Kim, Do-wan Kim, Bon-sung Koo, Yong-bum Kim, On-sik Choi, Nam-deog Kim
Development of Thin Electromagnetic Wave Absorption Wall Using Patch Elements ...................... Yoshinobu Okano
Vascular Structure Model for Improved Numerical Simulation of Heat Transfer in Human Tissue ................................................................................................................................. Mikheil Prishvin, Liana Manukyan, Revaz Zaridze
ESD Field Coupling Study in Relation with PCB GND and Metal Chassis ........................................... Jong-sung Lee, David Pommerenke, Jae-Deok Lim, Byong-Su Seol
ESD Current Spread Measurement Using Mesh Structure ................................................................... Jae-Deok Lim, David Pommerenke, Jong-sung Lee, Byong-Su Seol
Efficient Electrically Small Wide Band Planar Antenna for SAR Reduction ........................................... Jung-han Kim, Hong-min Lee
Measurements of the Induced Power in a Shape Shifting Transmission Line According to Immunity Tests in Reverberation and Semi Anechoic Chamber ................................................... Martin Obholz, Dirk Peier
Effect of Electromagnetic Polarization on Whole-Body Average SAR in Infant Model for Far-Field Exposures ...................................................................................................................................... Akimasa Hirata, Naoki Ito, Osamu Fujiwara
Analytical & Numerical Calculations of S-Parameters in Multilayer DPS-DNG Junctions ..................... Sibel Cimen, Gonca Cakir, Levent Sevgi
Radiation and Disturbance Mitigation in PLC Networks ....................................................................... Patrick Favre, Cedric Candolfi, Pascal Krahenbuehl
MoM and PEEC Method to Reach a Complete Equivalent Circuit of a Static Converter ..................... Vincent Ardon, Jeremie Aime, Olivier Chadebec, Edith Clavel, Enrico Vialardi
Electric and Magnetic Field Distribution Inside High and Very High Voltage Substations ................. Calin Munteanu, Gheorghe Visan, Ioan T. Pop, Vasile Topa, Emil Merdan, Adina Racasan
Measurements and Simulation of Common Mode Conducted Noise Emissions in Adjustable-Speed AC Drive Systems .......................................................................................................................... C. Jettanasen, Francois Costa, C. Vollaire, B. Revol, F. Morel
Influence of DVB-H Network Deployment on Total RF Exposure ......................................................... David Plets, Leen Verloock, Wout Joseph, Luc Martens
Corona Charged Subnanosecond Impulse Generator ........................................................................... N. Mora, F. Vega, F. Roman, N. Pena, F. Rachidi
A Behavioral Simulation and Analysis Method for Communication System ........................................ Wenqing Chen, Donglin Su, Xiaomu He, Yan Liu
A Low Cost Solution for the Realisation of Finite Planar Frequency Selective Shields ....................... Riccardo Stefanelli, Daniele Trinchero, Marco Di Giovanni
Measurement of Spread-Spectrum Radio Signals by Means of Wideband Field Probes ....................... Daniele Trinchero, Federico Longobardi, Riccardo Stefanelli, Benedetta Fiorelli, Laura Anglesio, Alberto Benedetto, Stefano Trinchero, Giovanni d’Amore, Michele Borsero, Giuseppe Vizio
Electromagnetic Resonances in Complex Structures: Case of a Vehicle ................................................ Serge Tapigue, Marco Klingler, Philippe Besnier
Influence of the IEC 61967 Test Board on IC Electromagnetic Emissions ........................................... Yamarita Villavicencio, Francesco Musolino, Franco Fiori, Davide Pandini
Printed Atmospheric Spark Gaps as ESD-Protection
Morten Soerensen .......................................................................................................................................................... 293
Analysis of Stochastic Resonances in Electromagnetic Couplings to Transmission Lines
O.O. Sy, M.C. van Beurden, B.L. Michielsen .................................................................................................................. 297
Influences of CUT on the VSWR of GTEM Cell
Xiang Zhou, Quan-xing Jiang, Hong-qi Jiang .................................................................................................................. 301
Susceptibility of a Sigma-Delta Converter to EMI
Domenico Musumeci, Franco Fiori .................................................................................................................................. 305
Simulation of Corrugated Coaxial Cables Using the Meshless Radial Point Interpolation Time-Domain Method
Christoph Bocklin, Thomas Kaufmann, Johannes Hoffmann, Christophe Fumeaux, Rudiger Vahlbeck .................. 309
Lightning-Transmission Line Current Transient TLM Numerical Simulation
Marcos A.F. Mattos ......................................................................................................................................................... 313
Reducing the Electromagnetic Emissions of Smart Power System-on-Chips by Design
Franco Fiori ........................................................................................................................................................................ 317
LCL and Common Mode Current at the Outlet Do Not Tell the Common Mode Current Generated at the Remote Unbalanced Element on the Power-Line
Masahiro Kitagawa ............................................................................................................................................................ 321
Electromagnetic Emission of Pulsed Plasma Thrusters
Andrey Plokhikh, Nikolay Antropov, Nikolay Vazhenin, Garri Popov, Gennady Shishkin, Galina Soganova ....... 325
Characteristics of EMD Source Caused by Valves in +-800-kV UHVDC Converter Station
Jie Zhao, Zhanqing Yu, Jinliang He, Rong Zeng, Hong Rao, Xiaolin Li, Ying Huang .......................................................... 329
Chip-Package Co-Modeling & Verification of Noise Coupling & Generation in CMOS DC/DC Buck Converter
Taiqon Song, Jiseong Kim, Junso Pak, Joungho Kim ......................................................................................................... 333
A Combined Stencil-Adjustable Time-Domain/FETD Method for Electrically-Large EMC Structures
Nikolaos Kantartzis, Christos Antonopoulos, Theodoros Tsiboukis ............................................................................ 337
Improving the Performances of a Reverberation Chamber: A Real Case
Mario Pocai, Ivan Dotto, Domenico Festa, Garth D’Abreu ............................................................................................. 341
An Improved Model for Prediction of the Dynamics of Lightning Channel Corona Sheath
Grzegorz Maslowski, Vladimir A. Rakov, Jovan Cvetic, Megumu Miki ........................................................................ 345
Worst Case Evaluation of Magnetic Field in the Vicinity of Electric Power Substations
Gerhard Braunlich, Reinhold Braunlich ............................................................................................................................ 349
Design of 1000-kV Ultra-High Voltage AC Corona Test Cage in China
Jian Tang, Jinliang He, Yingjian Yang, Xiong Wu, Shaoshi Ma ....................................................................................... 353
A Recurrent Neural Networks Based Modeling Approach for Internal Circuits of Electronic Devices
Aimin Zhang, Hang Zhang, Hong Li, Degui Chen ................................................................................................................... 357
Measurement of Radiated Electromagnetic Field Intensity Due to Micro Gap Discharge as Low Voltage ESD
Ken Kawamata, Shigeki Minegishi, Osamu Fujiwara ......................................................................................................... 361
Conducted Interference Immunity Test to High-Speed Power Line Communication System
Satoshi Hosoya, Masamitsu Tokuda, Takashi Matsuo ....................................................................................................... 365
Further Validation of Spark-Resistance Formula Applied for Human ESD
Yoshinori Taka, Osamu Fujiwara

Study of RF Microdosimetry for the Inner Organs of the Head, Using the Korean High-Resolution Model
Taehong Kim, Junhurk Oh, Jeongki Pack

Semi-Analytical Approach to Assess EM Constraints on Cylinder-Like Systems
I. Junqua, J.-P. Parmantier

Numerical Evaluation of Absorber Reflectivity in an Artificial Waveguide
Hugo Pues, Yoeri Arien, Frank Demming-Janssen, Jan Dauwen

Narrowband Interference Characteristics of High-Speed Power Line Communication Based on Wavelet-OFDM
Kenichi Nakagawa, Satoshi Hosoya, Masamitsu Tokuda, Yuji Igata

Susceptibility of Network Components to Pulsed Medium Power Microwave Fields
Ch. Braun, P. Clemens, H.U. Schmidt, M. Suhrke, A. Taenzer

Radiation Characteristic of Mono-Conical Antenna for Wideband Electromagnetic Field Generation
Shingo Inoue, Hideki Abe, Masamitsu Tokuda, Shinobu Ishigami

Vertical Electromagnetic Bandgap Structure for Noise Suppression in Single-Ended and Differential Signaling on a Multi-Layer Backplane Board
Chulsoon Hwang, Jongbae Park, Jaemin Kim, Kyoungchoul Koo, Joungho Kim

Scattering Analysis of a Wind Farm
Alejandro Calo Casanova, Miguel Calvo Ramon, Leandro de Haro y Ariet, Pedro Blanco-Gonzalez

Determination of General Public Exposure to WiMAX Base Stations
Christian Bornkessel, Markus Schubert, Matthias Wuschek

Total Radiated Power Measurements of WiFi Devices Using a Compact Reverberation Chamber
Vikass Monebhurrun, Thierry Letertre

Method of Evaluating Electromagnetic-Interference Characteristics of Wireless LANs by Narrowing Frequency Bandwidth of Desired Waves
Hiroshi Koyama, Masamitsu Tokuda, Noboru Fujita

Assessment of the Immunity of Unshielded Multi-Core Integrated Circuits to Near-Field Injection
Ali Alaeldine, Thomas Ordas, Richard Perdriau, Philippe Maurine, Mohamed Ramdani, Lionel Torres, M'hamed Drissi

Array of Antennas Design for the Source Stirring Technique
Graziano Cerri, Christian De Sanctis, Valter Mariani Primiani, Carlo Monteverde, Paola Russo

A Radiated Emission Model Compatible to a Commercial Electromagnetic Simulation Tool
P. Fernandez Lopez, A. Ramanujan, Y. Vives Gilabert, C. Arcambal, A. Louis, B. Mazari

Diffusion of Wireless Communication Technologies and Technological Lock-In
Nicolas Rohner, Roman Boustellier

Proposal of a Specific Test Methodology to Assess the Radiated Immunity Behavior of a Data Transmission from Beacon to Train
Y. Balghiti, B. Meyniel, J. Orion, F. Maumy, E. Francois, Philippe Besnier, M’hamed Drissi

Occurrence of GPS Phase Fluctuations in Northern and Southern Hemisphere
I. Shagimuratov, A. Krankowski, I. Efishov, I. Zakharenkova, N. Tepentsyna
Reradiation Interference Computation Model of High Voltage Transmission Line to the Shortwave Radio Direction Finding Station .......................................................... 441
Xiao-wu Zhang, Jian Tang, Huan-guo Zhang, Xing-fa Liu

Setup for Measuring the Derating of SMD Components Under ESD Stress ............................................. 445
Franz Streibl, Stefan Tenbohlen, Jorg Hartmann, Eric Dudenhoeffer

Hybrid MoM Scheme with Incorporation of Equivalent Glass Antenna Model in Application to Automotive EMC Problems .......................................................... 449
Faik Bogdanov, David Karkashadze, Roman Jobava, Anna Gheonjian, Ekaterina Yavolovskaya, Natalia Bondarenko

Modeling of Frequency Dependent Losses of Transmission Lines with VHDL-AMS in Time Domain .......................................................... 453
Kerstin Siebert, Harald Gunther, Stephan Frei, Wolfgang Mickisch

Mutual Inductance of Capacitor Low-Pass Filters .......................................................... 457
Thomas Fischer, Christian Kneuer, Manfred Albach, Goran Schubert

Modelling of Electromagnetic Immunity of Integrated Circuits by Artificial Neural Networks .......................................................... 461
Vladimir Ceperic, Adrijan Baric

Electric and Magnetic Fields Predicted by Lightning Return Stroke Electromagnetic Models .......................................................... 465
Yoshihiro Baba, Vladimir A. Rakov

Augmented Models of High-Frequency Transformers for SMPS .......................................................... 469
I.A. Maio, P. Savi, I.S. Stievano, Flavio G. Canavero

Verification of Feed-Through Configurations by Means of Simple Test Apparatus on Component Level .......................................................... 473
Thomas Schmid, Michael Wollitzer, Lauri Halme, Bernhard Mund

Comparing Cable Discharge Events to IEC 61000-4-2 or ISO 10605 Discharges .......................................................... 477
Bastian Arndt, Friedrich zur Nieden, Rainer Pohmerer, Johannes Edenhofer, Stephan Frei

Modeling of Electrical Igniters of Vehicle Occupant Restraint Systems for EMC Simulations .......................................................... 481
U. Hilger, L. Lei, Stephan Frei, M. Rudolph

Detecting the Number of EMI Sources Based on Higher Order Statistics .......................................................... 485
Zhenfei Song, Donglin Su, Shuguo Xie

Scalable Equivalent Circuit Modelling of the EM Field Coupling to Microstrips in the TEM Cell .......................................................... 489
Filip Vanhee, Johan Catrysse, Renaud Gillon, Georges Gielen
