Algorithm Session

Sufficient Conditions for Absolute Stability and Optimization Using Genetic Algorithms of Specific Class of Fuzzy Logic Controllers .................................................................1
    Jakub Osmic and Naser Prljaca

Evaluation of Meta-Search Engine Merge Algorithms .................................................................9
    Chunshuang Liu, Zhiqiang Zhang, Xiaoqin Xie, and TingTing Liang

Ubiquitous Computing in Financial Forecast and Early Warning ......................................................15
    Yuan Wan, Hengqing Tong, and Jing Tang

A Content-Based Algorithm for Blog Ranking ..................................................................................19
    Jie Shen, Yan Zhu, Hui Zhang, Chen Chen, Rongshuang Sun, and Fayan Xu

Research and Realization of Random Encryption Algorithm ..........................................................23
    Gao Wei, Zhang Guoyin, Li Yanmei, and Chen Weihua

An Invalidation Cache Model Based on Ant Colony Algorithm in Mobile Databases ......................27
    Yan Chu, Jianpei Zhang, and Jing Yang

Potential Target Traversing Detection Algorithm Based on Voronoi Diagram ....................................31
    Jin Zhang, Daxin Liu, Yuezhu Xu, Meng Zhao, and Wenhui Zhao

The Inverse Protein Folding Process by Artificial Life Approaches ..................................................35
    WeiXin Kang, Jing Zhang, MaoZu Guo, and Wei Peng

A New Method for Simulating Protein Folding Process -- Snake Algorithm ....................................39
    Jing Zhang, MaoZu Guo, Song Li, and Wei Peng

Research on Hierarchial Fuzzy Behavior Learning of Autonomous Robot .......................................43
    Ziying Zhang, Rubo Zhang, and Xin Liu
Data/Image Processing Session

Adaptive Morphological Method for Clutter Elimination to Enhance and Detect Infrared Small Target ..........................................................47
   Xiangzhi Bai, Fugen Zhou, Yongchun Xie, and Ting Jin

The Research of Mathematical Formula Recognition Method Base on Baseline Structure Analysis ............................................................53
   YongHua Li, KeJun Wang, Wei ShangGuan, and LiQun Tang

Minimal Condensed Cube: Data Organization, Fast Computation, and Incremental Update .................................................................60
   Zhuo Wang and Ye Xu

The Discovery of Attribute Feature Cluster for Any Clustering Result Based on Outlier Detection Technique ........................................68
   Gang Liu, Jiming Pang, Xiufeng Piao, and Shaobin Huang

Forecasting Day Ahead Spot Electricity Prices Based on GASVM ........................................................................................................73
   Wei Sun and Jie Zhang

A Novel Clustering Algorithm for Prefix-Coded Data Stream Based upon Median-Tree .................................................................79
   Guangsheng Feng, Huiqiang Wang, Qian Zhao, and Ying Liang

ICAIS: A Novel Incremental Clustering Algorithm Based on Artificial Immune Systems .................................................................85
   Xianghua Li, Tianyang Lu, Zhengxuan Wang, and Chao Gao

A ROI-Based Mining Method with Medical Domain Knowledge Guidance ..........................................................................................91
   Haiwei Pan, Qilong Han, Guisheng Yin, Wei Zhang, Jianzhong Li, and Jun Ni

Objective Evaluation of Several Shift Invariant Image Fusion Methods .........................................................................................98
   YinQing Li, LingLing Li, and Bao Li

The Model Selection for Semi-Supervised Support Vector Machines .......................................................................................102
   Ying Zhao, Jian-pei Zhang, and Jing Yang

An Improved Hierarchical Multi-class Support Vector Machine with Binary Tree Architecture .........................................................106
   Lili Cheng, Jianpei Zhang, Jing Yang, and Jun Ma

Graphics Session

A Fast Multi-level Algorithm for Drawing Large Undirected Graphs .........................................................................................110
   Weihua Zhou and Jingwei Huang

A Fast and Efficiency Character Model Method for 3D Game ...........................................................................................................118
   LiWei Wang and Jing Zhang

The Research of Video Tracking System Based on Virtual Reality ...............................................................................................122
   Guisheng Yin, Yanbo Li, and Jing Zhang

An Efficiency Method for Visual Scene Building .........................................................................................................................128
   Hailing Wang and Jing Zhang

View-Dependent and Visual Attention Based Level of Detail ........................................................................................................132
   Si-Liang Yu and Jing Zhang
Research on Ontology-Based Measuring Semantic Similarity .................................................................250
  Yin Guisheng and Sheng Qiuyan
Research on Ontology Matching Approach in Semantic Web .................................................................254
  Rubo Zhang, Ying Wang, and Jing Wang
Research on Semantic Web-Oriented Ontology Model ............................................................................258
  Jing Wang, Jianpei Zhang, and Ying Wang
A Novel Research Approach on Network Control Systems ...................................................................262
  Zhang Lihua, Wu Yuqiang, Gong Lei, and Chen Haojie
xIR: Logic Inference-Based Retrieval Method for XML .............................................................................266
  Peiguang Lin, Guangyan Liu, Kangkang Zhang, and Zhizheng Zhou
Applying a Novel Combined Classifier for Hypertext Classification
  in Pornographic Web Filtering ..................................................................................................................270
  Zhong Gao, Guanming Lu, Hao Dong, Shutong Wang, Haibo Wang, and Xiaopei Wei
Building Improved GIS Service Based on WSRF .....................................................................................274
  Zhiming Gui and Kai Song
Optimal Protocol Interoperability Test Generation via Heuristic Algorithm ...........................................278
  Ning Zhong, Zunwen He, Jingming Kuang, and Zhihai Zhuo
A Novel Hierarchical Clustering Routing Algorithm for Wireless Sensor Networks ...................................282
  Kaihua Xu, Yongcan Jia, and Yuhua Liu

Security Session
Simulation Study of Flood Attacking of DDOS ..........................................................................................286
  Ming Li, Jun Li, and Wei Zhao
Index System of Information Systems Survivability: Formal Definitions and Reasoning ..........................294
  Huiqiang Wang, Jian Wang, and Guosheng Zhao
An Authenticated Encryption Mechanism for Secure Group Communication in Grid .........................298
  Yunfa Li, Hai Jin, Deqing Zou, Sanmin Liu, and Zongfen Han
Secure Files Management System in Intranet ..........................................................................................306
  Hua Zhang, Jun-feng Diao, and Qiao-yan Wen
Stochastic Game Theoretic Method of Quantification for Network Situational Awareness .....................312
  Huiqiang Wang, Ying Liang, and Xiaowu Liu
An Extraction Method of Situational Factors for Network Security Situational Awareness ...................317
  Huiqiang Wang, Ying Liang, and Haizhi Ye
The Classification, Design and Placement of Security Sensor for Network Security Situational Awareness System .................................................................321
  Wang Hui-qiang, Lai Ji-bao, Liang Ying, and Liu Xiao-wu
A New Domino Logic Synthesis Approach ...............................................................325
  Xiaoxiao Liu, Tao Zhou, Jingbo Shao, Haijun Li, and Huiling Lu

Survivable Network System: An Immune Approach .................................................................329
  Huiqiang Wang, Guosheng Zhao, and Jian Wang

A Strategy Selection Model for Network Survivability .............................................................332
  Huiqiang Wang, Guosheng Zhao, and Jian Wang

A Comprehensive Assessment Method for Network Survivability ........................................335
  Huiqiang Wang, Jian Wang, and Guosheng Zhao

A Semantic Trust Modeling Method for Service Composition ..............................................339
  Xiaoqin Xie, Bailing Du, Miao Hu, and Zhiquiang Zhang

Software Session

An Autonomic Evaluation Model of Complex Software ..........................................................343
  Haitao Zhang, Huiqiang Wang, and Ruijuan Zheng

Fuzzy Integrated Evaluation for Measuring Quality of Feature Space-Based Component Model .................................................................349
  Li Jin, Guisheng Yin, and Dekun Yang

Integrated Evaluation Model for Software Process Modeling Methods ..................................355
  Rubo Zhang and Bing Zhang

Minimal Trellises for Two Classes of Linear Codes ..................................................................359
  Qinghui Lan and Haibin Kan

Design and Implementation of RAS-Based Reusable Asset Management Tool ....................363
  Ze-Sheng Wang, Ru-Zhi Xu, Kang-Kang Zhang, and Da-Li Feng

System Architecture Session

Optimizing Xen VMM Based on Intel® Virtualization Technology ........................................367
  Xiantao Zhang and Yaozu Dong

Combined Partial Test Vector Reuse and FDR Coding for Two Dimensional SoC Test Compression ...................................................................................375
  GuangSheng Ma, JingBo Shao, and RuiXue Zhang

Heterogeneous NoC Physical-Level Low-Power Implementation ........................................379
  Zhaohui Song and Guangsheng Ma

Web/Services/Distributed Computing Session

Grid-Based Hierarchical Spatial Clustering Algorithm in Presence of Obstacle and Constraints .................................................................383
  Yue Yang, Jian-pei Zhang, and Jing Yang

P2HP: Construction of a Cooperative Server Group Based Volunteer Computing Environment ...................................................................................389
  Xianyong Wang and Shengchao Xu

Study on Requirement Testing Method Based on Alpha-Beta Cut-Off Procedure ..........................396
  Gang Liu, Shaobin Huang, and Xiufeng Piao
