Track 1: System-Wide Events and Analysis Methods

Power System Dynamic Performance 1

Chair: Vijay Vittal, Arizona State University
Co-Chair: Anurag Srivastava, Mississippi State University
Sponsor: Power System Dynamic Performance

A System Wide Scheme for Mitigation of Voltage Instability
Turaj Amraee; Rene Feuillet; AliMohammad Ranjbar and Babak Mozafari ........................... 1

Design and Implementation of a New Onload Voltage Regulator for Power Distribution Systems
R. R. de Lima; G. C. Guimaraes; Aloï-sio de Oliveira; M. L. R. Chaves;
P. R. C. Silva and VinÂ­cius Benichio ................................................................................................................................. 8

Implementation of a Control Strategy for Dynamic Voltage Restorer(DVR) and Dynamic Voltage Compensator(DVC)
Ahad Kazemi and Ali Azhdast ................................................................................................................................. 15

Decision Tree Assisted Controlled Islanding for Preventing Cascading Events
Ruisheng Diao; Vijay Vittal; Kai Sun; Sharma Kolluri; Sujit Mandal and Floyd Galvan........ 21

Power System Dynamic Security Classification Using Kohenen Neural Networks
Mohammad Reza Aghamohammadi; Fazel Mahdavizadeh and Reza Bagheri ....................... 29

The System Impact of Air Conditioner Under-Voltage Protection Schemes
Ning Lu; Bo Yang; Zhenyu Huang and Richard Bravo................................................................. 36

The Study on Optimizing Re-Closing Time to Improve the Transmission Capacity
Peng Li; Baohui Zhang; Zhiguo Hao; Zhiqian Bo; Andrew Klimek; Yufei Rao and Yuting Wang.............................................................................................................. 44

Wide Area Phasor Measurement Systems and Interarea Planning

Chair: Michael I. Henderson, New England ISO
Sponsor: Power System Planning and Implementation

Utility Planning for a Wide Area Measurement System
Tony Weekes and Brian Archer ................................................................................................................................. 50

Joint Coordinated System Planning Study Conceptual Transmission Plans and the Wide Area Phasor Measurement System Potential Applications
Dale Osborn; Zheng Zhou and Liangying Hecker ......................................................................................... 57

Wide Area Monitoring using Common Information Model and Sensor Web
Nischal Dahal; Vinoth Mohan; Surya Durbha; Anurag Srivastava; Roger King; Nicolas Younan and Noel Schulz .............................................................................................................. 62
Phasor Assisted State Estimation for NYS Transmission System -- Implementation & Testing  
A. Ghassemian and Bruce Fardanesh .................................................................................... 69

Benchmarking of Planning Models Using Recorded Dynamics  
Zhenyu Huang; Bo Yang and Dmitry Kosterev ................................................................. 77

Cascading Failures: Mitigation and Restoration

Chair: Pei Zhang, EPRI  
Sponsor: Power System Analysis, Computing, and Economics

Vulnerability Assessment for Cascading Failures in Electric Power Systems  
IEEE CAMS Task Force on Cascading Failures IEEE and Zhenyu Huang ............................ 83

Analysis and Control of Major Blackout Events  
Koji Yamashita; Juan Li; Pei Zhang and Chen-Ching Liu .................................................... 92

Probabilistic Reliability Assessment for Transmission Planning and Operation Including Cascading Outages  
Stephen Lee .......................................................................................................................... 96

Modeling, Simulating and Online Setting-Checking for Protective Relay  
Hongbin Sun; Boming Zhang; Ying Lu; Zhelong Pan and Wenchuan Wu ........................ 104

Deployment and Applications of Synchronized Phasor Measurements

Chair: Sujit Mandal, Entergy  
Co-Chair: Richard Schulz, Consultant  
Sponsor: Power System Dynamic Performance

Coordinating Power Oscillation Damping Control Using Wide Area Measurements  
Emil Johansson; Kjetil Uhlen; Albert B. Leirbukt; Petr Korba; Jan Ove Gjerde and Lars Kristian Vormedal .................................................................................................................. 109

Implementation of CSG's Wide-Area Damping Control System: Overview and Experience  
Li Peng; Wu Xiaochen; Lu Chao; Shi Jinghai; Hu Jiong; He Jingbo; Zhao Yong and Xu Aidong .............................................................................................................................. 117

On the Use of df/dt in Power System Emergency Control  
Hassan Bevrani; Gerard Ledwich and J. J. Ford .................................................................. 126

Phasor Measurement Units (PMU) Instrumental in Detecting and Managing the Electrical Island Created in the Aftermath of Hurricane Gustav  
Floyd Galvan; Sujit Mandal and Mark Thomas .................................................................... 132

Preliminary Synchronized Phasor Data Analysis of Disturbance Events in the US Eastern Interconnection  
Joe H. Chow; Luigi Vanfretti; Andrew Armenia; Scott Ghiocel; Sanjoy Sarawgi; Navin Bhatt; David Bertagnolli; Meera Shukla; Xiaochuan Luo; Dean Ellis; Dawei Fan; Mahendra Patel; Andrew Hunter; Dave Barber and Gary L. Kobet .................................................. 136
Power System Dynamic Performance 2

Chair:          Anurag K Srivastava, Mississippi State University  
Sponsor:       Power System Dynamic Performance

Study of Voltage Collapse Cases of a Large Power System Using Static and Dynamic Approaches  
Bishnu Sapkota and Vijay Vittal .................................................................144

Dynamic Security Constrained Rescheduling Using Stability Sensitivities by Neural Network as a Preventive Tool  
Mohammad Reza Aghamohammadi; Ali Maghami and Farzad Dehghani ......................152

Design of Decentralized Non-Linear Controller for Transient Stability Improvement under Symmetrical and Unsymmetrical Fault Conditions: A Comparative Analysis with SSSC  
T. R. Jyosthna and K. Vaisakh ...............................................................................159

Tracking Objective Controller Design for Power System Stability Based on Linearization through Observation  
Dong Liu; Huaiqing Liao; Zhiqiang Yuan and Hongman Yan........................................167

Review of Robust Feedback Control Applications in Power Systems  
Lingling Fan .............................................................................................................171

Automated Parameter Derivation for Power Plant Models Based on Staged Tests  
Pouyan Pourbeik ........................................................................................................178

Mode Initialization for On-Line Estimation of Power System Electromechanical Modes  
Ning Zhou; Dan Trudnowski and John Pierre ..........................................................187

A Real Shipboard Power System and Its Computer Simulation  
He Chen; Zongxiang Lu; Jun Ye and Shuangxi Zhou ..................................................195

Reliability and Risk Management

Chair:          Milorad Papic, Idaho Power  
Sponsor:       Power System Analysis, Computing, and Economics

Customer Electricity Purchasing Risk Decision Under Real-Time Pricing  
Qin Zhang and Xifan Wang.......................................................................................202

Application of Probabilistic Techniques in Asset Management  
Rodney Fickler; Luiz Cheim and Baldwin Lam .........................................................208

Long Tails from the Distribution of 23 Years of Electrical Disturbance Data  
David Cornforth ........................................................................................................215

Reliability Analysis of Wide Area Measurement System Based on the Centralized Distributed Model  
Liu Wen-Xia; Liu Nian; Fan Yong-Feng; Zhang Li-Xin and Zhang Xin..........................223
Track 2: Integrating Wind Energy

Wind Power: Managing Uncertainty

Chair: Michael Milligan, National Renewable Energy Laboratory
Sponsor: Power System Analysis, Computing, and Economics

Estimating Real-Time Balancing Prices in Wind Power Systems
Magnus Olsson and Lennart Söder ................................................................. 229

The Effect of Wind Profile on Thermal Units Generation Costs
Mohammed Albadi and Ehab El-Saadany ......................................................... 238

Wind Power Day-Ahead Uncertainty Management through Stochastic Unit Commitment Policies
Pablo Ruiz; Russ Philbrick and Peter Sauer ..................................................... 244

Measurements and Estimation for Operations Reliability

Chair: Renato Cespedes, KEMA
Sponsor: Power System Operations

Impact of Recent Blackout - Return of Experiences on Utility Operation IT Infrastructure
Damien Tholomier and Jay Giri ........................................................................... 253

Monitoring and Mitigating the Voltage Collapse Problem in the Natal Network
Armando Guzmán; Marcos Donolo; Mani Venkatasubramanian and Franco de Villiers .... 260

Two-level PMU-based Linear State Estimator
Tao Yang; Hongbin Sun and Anjan Bose ............................................................ 265

Identification of Critical Measurements in the Power System Network
Kenedy Greyson and Anant Oonsivilai ............................................................. 271

Power System Tracking And Dynamic State Estimation
Amit Jain and Shivakumar N. R. ....................................................................... 277

Extracting Steady State Values from Phasor Measurement Unit Data Using FIR and Median Filters
Joseph Tate and Thomas J. Overbye ................................................................. 285

PSDP Committee Meeting and PSDP Wind Power Paper Session

Chair: Zhenyu (Henry) Huang, Pacific Northwest National Laboratory
Sponsor: Power System Dynamic Performance

Estimation of Wind Farms Working in Presence of Voltage Dips Using the IEEE Std. 1459-2000
Joaquin Montañana-Romeu; Vicente León-Martínez; José Roger-Folch; Emilio Goméz-Lázaro; M. Cañas; Juan Alvaro Fuentes and A. Molina ........................................ 293
Dynamic Simulation of a Hybrid Wind Power System Using RPMSim  
Eduard Muljadi; Wenzhong Gao; Rick Carson and Vadim Zheligov .............................................. 299

Power Quality Enhancement of Grid-Connected Wind Power Generation System by SMES  
Hee-yeol Jung; Dae-Jin Park; Hyo-Ryong Seo; Minwon Park and In-Keun Yu.......................... 306

Transient Stability of the Grid with a Wind Power Plant  
Eduard Muljadi; Tony Nguyen and M. A. Pai .................................................................................. 312

Design of a Damping Controller for a SMES Unit to Suppress Tie-Line Active-Power Fluctuations of a Large-Scale Wind Farm  
Li Wang; Shiang Shong Chen; Wei-Jen Lee and Zhe Chen ....................................................... 319

Assessment and Enhancement of Grid Fault-Induced Torsional Oscillations for Induction Generator-Based Wind Turbines  
Babak Badrzadeh; Salman Salman and Kenneth Smith ........................................................... 326

Cluster Analysis of Wind Turbines of Large Wind Farm  
Yong Ma; John N. Jiang and Thordur Runolfsson .................................................................. 333

Impact of Fixed and Variable Speed Wind Generators on the Transient Stability of a Power System Network  
Komla Folly and Severus Sheetekela ....................................................................................... 340

Examination of Wind Turbine Generator Models Response to Disturbances  
Mikhail Borodulin ...................................................................................................................... 347

Impact of Large Offshore Wind Farms on Power System Transient Stability  
Fekadu Shewarega; Istvan Erlich and Jose Rueda ................................................................. 355

Renewable Power Generation

Chair:  Mohamed A. H. El-Sayed, University of Trinidad and Tobago
Co-Chair:  Wenzhong Gao, Tennessee Technological University
Sponsor:  Energy Development and Power Generation

Dynamic Modeling and Control of Doubly Fed Induction Generators Driven by Wind Turbines  
Wei Qiao................................................................................................................................... 363

A Methodology for the Identification of the Sustainable Wind Potential. The Portuguese Case Study  
Teresa Simões; Paulo Costa and Ana Estanqueiro .................................................................. 371

Development of Low Voltage Ride-Through Control Strategy for Wind Power Generation Using Real Time Digital Simulator  
Wenzhong Gao; Ge Wang and Jiaxin Ning .................................................................................. 378

Long-Term Planning and the Sustainable Power System: A Focus on Flexibility Needs and Network Reliability  
Nadia Maizi; Vincent Mazauric; Edi Assoumou and Mathilde Drouineau .................................. 384
PSCE 2009

Static Synchronous Generators for Distributed Generation and Renewable Energy
Qing-Chang Zhong and George Weiss ................................................................. 390

Modeling the Combination of UPQC and Photovoltaic Arrays with Multi-Input Single-Output DC-DC Converter
Masoud Davari; Sayyed Mahdi Ale-Emran; Hesam Yazdanpanahi and Gevorg B. Gharehpetian ................................................................. 396

Wind Farm and Wake Effect Modeling for Simulation of a Studied Power System
Xinyan Zhang and Weiqing Wang ................................................................. 403

Short Term Forecasting in Operations
Chair: Mo El-Hawary, Dalhousie University
Sponsor: Power System Operations

Potential Benefits of a Dedicated Probabilistic Rapid Ramp Event Forecast Tool
Cameron Potter; Eric Grimit and Bart Nijssen ................................................................. 409

Massive Data Acquisition for the Short Term Wind Power Forecasting in a Large Grid: The Hydro-Québec SAGIPE System Experience
Vincent Balvet; Jacques Bourret and Jean-Emmanuel Maubois .............................................. 414

One Day Ahead Wind Speed Forecasting Using Wavelets
Ahmad Khan and Mohammed Shahidehpour ................................................................. 421

Impact of Load Forecast Uncertainty on LMP
Rui Bo and Fangxing Li ......................................................................................... 426

An Aggregate Model Applied To The Short-Term Bus Load Forecasting Problem
Ricardo Salgado; Rosangela Ballini and Takaaki Ohishi ................................................................. 432

Wind Power: Analyzing System Impacts
Chair: Michael Milligan, National Renewable Energy Laboratory
Sponsor: Power System Analysis, Computing, and Economics

Optimal Firm Wind Capacity Allocation to Power Systems With Security Constraints
Daniel Burke and Mark O'Malley ......................................................................................... 440

The Irish "All Island Grid Study" - Methodological Approaches and Outcomes
Jens Boemer and Diane Broad ......................................................................................... 449

Regulation Requirements with High Wind Generation Penetration in the ERCOT Market
Reigh Walling; Lavelle Freeman and Warren Lasher ................................................................. 454

Pitfalls of Modeling Wind Power Using Markov Chains
Kevin Brokish and James Kirtley ......................................................................................... 461
Track 3: Emerging Software Needs for the Restructured Grid

Distribution System Trends - Analytical Methods

Chair: Tom McDermott, EnerNex Corporation
Sponsor: Power System Analysis, Computing, and Economics

Roadmap for the IEEE PES Test Feeders
Roger Dugan; W Kersting; S. Carneiro, Jr.; R. Arritt and T. McDermott ........................................ 467

The Modeling and Application of Step Voltage Regulators
Bill Kersting ........................................................................................................................................... 471

Distribution Power Flow for Smart Grid Technologies
Kevin Schneider; David Chassin; Y. Chen and Jason Fuller ................................................................. 479

Distribution System State Estimation using AMI Data
Mesut Baran and T.E. McDermott ......................................................................................................... 486

Distribution System Trends - Data Integration

Chair: Tom McDermott, EnerNex Corporation
Sponsor: Power System Analysis, Computing, and Economics

Real-time Distribution System Analysis - Integral Part of DMS
Ilya Roytelman and Volker Landenberger ............................................................................................. 489

Real-Time Power Electric System Modeling, Assessment and Reliability Prediction
Danling Cheng; Yishan Liang; Dan Zhu and Robert P. Broadwater ..................................................... 495

Transforming Traditional Geographic Information System to Support Smart Distribution Systems
Parag Parikh and Terry Nielsen ........................................................................................................... 501

Enterprise Integration of Demand Response and Meter Data

Chair: Ali Vojdani, UISOL
Sponsor: Power System Operations

Enterprise Integration of Demand Response and Meter Data
Ali Vojdani ............................................................................................................................................... 505

Lesson Learned from Real-Life Implementation of Demand Response Management
Peter Langbein ........................................................................................................................................... 506

Communication Standards for Small Demand Resources
H. Johnson .................................................................................................................................................. 507

Integrating Advanced Metering Data into the Enterprise
Chris King .................................................................................................................................................. 510
Experience of Great River Energy with Meter Data Management
Jim Jones ..................................................................................................................................511

Modeling of Demand Response Contracts with Operational Reliability Indices in Distribution Management System
Jayant Kumar ................................................................................................................................512

High Performance Computing Applications in Power Systems

Chair: Joseph (Zeb) Tate, University of Toronto
Co-Chair: Zhenyu (Henry) Huang, Pacific Northwest Labs
Sponsor: Power System Operations

Fast Parallelized Algorithms for On-Line Extended-Term Dynamic Cascading Analysis
Siddhartha Khaitan; Chuan Fu and James McCalley..................................................................513

FPGA Hardware Results for Power System Computation
Chika Nwankpa; Jeremy Johnson; Prawat Nagvajara; Timothy Chagnon and Petya Vachranukunkiet .................................................................................................................520

Dynamic State Estimation Utilizing High Performance Computing Methods
Kevin Schneider; Zhenyu Huang; Bo Yang; Matt Hauer and Y. Nieplocha .................................523

Practical Experiences on High Performance Power System Applications Implementation
Xing Wang........................................................................................................................................529

A Multi-Agent Based Distributed Computing Platform for New Generation of EMS
Boming Zhang; Chuanlin Zhao and Wenchuan Wu................................................................. 532

Intelligent Systems

Chair: Manisa Pipattanasomporn, Virginia Tech
Sponsor: Power System Analysis, Computing, and Economics

A Fuzzy Adaptive Particle Swarm Optimization for Long-Term Optimal Scheduling of Cascaded Hydropower Station
Wenping Chang; Xianjue Luo and Hai Yu................................................................................539

Capacity Withholding in Restructured Wholesale Power Markets: An Agent-Based Test Bed Study
Hongyan Li and Leigh Tesfatsion .................................................................................................544

A Learnable Kernel Machine for Short-Term Load Forecasting
Lin Zhang; Guang Dai; Yijia Cao; Guixiang Zhai and Zhaoyan Liu .........................................555

A Zonal Congestion Management Using PSO and Real Coded Genetic Algorithm
Erukulla Muneender and Vinod Kumar D.M. .............................................................................561

An Angle-Based PSO Approach For Reactive Power Management Problem
Kianoosh Pooya and Hamid Lesani ...........................................................................................567
PSCE 2009

CIM Status Update

Chair: Ed Dobrowolski, NERC
Sponsor: Power System Operations

CIM Documentation Update
Edward Dobrowolski

Justifying the CIM
Terrence Saxton

Specifying the Use of CIM in an EMS Project
Jay Britton

CIM Update Status
Kendall Demaree

CIMug Interaction with IEC
Randy Rhodes

CIM Model Management
Kurt Hunter

Time-Based Management of Large Scale Network Models
Curtis Crews

Operations Scheduling and Dispatch

Chair: Jagjit Singh, OATI
Sponsor: Power System Operations

A Predictive Control Approach for Long Term Hydrothermal Scheduling
Monica Zambelli and Secundino Soares

Security Coordinated Maintenance Scheduling in Deregulation Based on Genco Contribution to Unserved Energy
Hemantkumar Barot and Kankar Bhattacharya

Secant Method Combined with PSO for Economic Dispatch with Prohibited Operating Zones
Karri Chandram; Nallamothu Subrahmanyam and Maheswarapu Sydulu

Generation Scheduling for a Price Taker Genco in Competitive Power Markets
Govinda Shrestha and Qiao Songbo

Fuzzy Inference Systems Approach for Long Term Hydrothermal Scheduling
Bruno Monte and Secundino Soares
Track 4: Control System Robustness Today and in the Future

Network Solutions Using FACTS

Chair: Brian Johnson, University of Idaho
Sponsor: Transmission and Distribution

Introduction to FACTS Controllers
Rajiv Varma ................................. 610

Power System Problems Solved by FACTS Devices
Heinz Tyll and Frank Schettler .......... 616

How FACTS Controllers Benefit AC Transmission Systems - Phases of Power System Studies
John Paserba .................................. 621

Planning Issues for FACTS
Michael Henderson ......................... 625

Planning HVDC and FACTS in New England
Michael Henderson; David Bertagnolli and Donald Ramey .................................. 629

Real-Time Stability Assessment in Modern Power System Control Centers Panel

Chair: Savu C. Savulescu, ECIQS
Sponsor: Power System Operations

Real-Time Transient Security Assessment in Australia at NEMMCO
Stephen Boroczky and Ellis Gentle ................................................................. 632

What is the Likely Future of Real-Time Transient Stability?
Damien Ernst; Louis Wehenkel and Mania Pavella ................................. 638

Real-Time Stability Assessment in the Control Centers of the ISO of Bosnia and Herzegovina and a National Dispatching System in North Africa
Edwin Lerch; Olaf Ruhle and Dusko Vickovic .................................................. 641

Overview of Key Stability Concepts Applied for Real-Time Operations
Savu Savulescu ........................................ 646

LIPA Implementation of Real-Time Stability Monitoring in a CIM Compliant Environment
Loris Arnold and Janos Hajagos ................................................................. 652
Advanced Controls for Distribution Systems

Chair: Brian Johnson, University of Idaho
Sponsor: Transmission and Distribution

Volt/var Management—An Essential "SMART" Function
E. Tom Jauch ................................................................. 658

Demonstrative Study of Control System for Distribution System
with Distributed Generation
Hiroyuki Hatta; Satoshi Uemura and Hiromu Kobayashi ....................... 665

An Effective Voltage Control Scheme for Distribution Systems by
Means of Multi-Agents
Yoshifumi Zoka; Naoto Yorino; Nobuaki Toga and Hiroaki Sugihara ..................... 671

On-Line Automatic Switching of Consumers’ Connections for Improved Performance of
A Distribution Feeder
Olawale Popoola; Adisa Jimoh and Dan Nicolae ............................................. 679

Improving the Dynamic Performance of Wind Farms With STATCOM
Aditya Jayam and Badrul Chowdhury .......................................................... 686

A Wavelet Packet Transform-based Approach for Evaluating the Performance of a Wind
Farm Subject to Voltage Sag according to IEEE Standard 1459-2000
Walid Morsi and Mohamed El-Hawary ..................................................... 694

Advances in Electric Machines & Drives

Chair: Professor Osama Mohammed, Florida International University
Sponsor: Electric Machinery

Parameter Optimization for Sensorless Position and Speed Control of Permanent Magnet
Motor at Low Speed using Genetic Algorithm
Ahmad Khan and Osama Mohammed ....................................................... 701

Integrating Electrical and Aerodynamic Characteristics for DFIG Speed Control Study
Shuhui Li; Tim Haskew and Shukul Mazari ................................................ 706

Nonlinear Control of Wind Power Generation Systems
Yi Guo; John Jiang and Choon Yik Tang ...................................................... 714

On-Line Synchronous Machine Parameter Extraction from Small
Signal-Injection Techniques
Jing Huang and Jing Huang ................................................................. 721
Techniques and Technology for a Secure Grid

Chair: Siri Varadan, KEMA
Sponsor: Power System Planning and Implementation

Assessing Vulnerability to Cascading Outages
Navin Bhatt; Sanjoy Sarawgi; Rob O’Keefe; Patrick Duggan; Matt Koenig;
Margaret Leschuk; Stephen Lee; Kai Sun; Sharma Kolluri; Sujit Mandal;
Maryclaire Peterson; Daniel Brotzman; Steven Hedden; Eugene Litvinov;
Slava Maslennikov; Xiaochuan Luo; Edvina Uzu .......................................................... 722

Proposition for a Novel Locational Reliability Index in Power Systems
Hemantkumar Barot and Kankar Bhattacharya ................................................................. 731

The Concept of Power Unit Zone in Power System Reliability Evaluation Including Protection System Failures
Kai Jiang and Chanan Singh ............................................................................................. 738

Coordinated Reactive Power Planning against Power System Voltage Instability
Venkat Krishnan; Haifeng Liu and James McCalley .......................................................... 748

VFT – A Smart Transmission Technology That Is Compatible With the Existing and Future Grid
Paul Marken; John Marczewski; Robert D’Aquila; Paul Hassink; Jim Roedel
and Richard Bodo ............................................................................................................. 756

Transmission Planning for a Robust Grid

Chair: Fran Li, University of Tennessee
Sponsor: Power System Planning and Implementation

Transmission Planning Risk Indices - What now?
Siri Varadan and Jasper van Casteren .................................................................................. 763

Utility Application Experience of Probabilistic Risk Assessment Method
Pei Zhang; Liang Min; Liana Hopkins; Bruce Fardanesh; Prakash Patro;
Jim Useldinger; Mark Graham and Dillwyn Ramsay .......................................................... 770

A Method of Evaluating Transmission Network Expansion Plan Considering Security Constraints and Supply Reliability Index
Ken Furusawa; Kenji Okada and Hiroshi Asano .................................................................. 777

Development of a Support Tool to Level Transmission Equipment Replacements over Long Term
Masaki Nagata; Arisa Takehara and Ikuo Kurihara ............................................................ 783

Considerations on the Use of HVDC for CREZ Transmission
Nelson Bacalao; Anthony Wayne Galli; Michael Hutson and Ramon Nadira ....................... 790

An Approach to Analyze and Evaluate Transmission Cost Impacts for New Generation Proposals
Jeff Smith; Bhaskar Ray; Kyung Soo Kook and Pouyan Pourbeik ........................................ 797
Track 5: The Smart Grid and the Internet

Cyber-Physical System Security - Assessment

Chair: Manimaran Govindarasu, Iowa State University
Sponsor: Power System Analysis, Computing, and Economics

Complexities of Information Security in Cyber-Physical Power Systems
Bruce McMillin .................................................................803

Supporting Cyber Risk Assessment of Power Control Systems with Experimental Data
Giovanna Dondossola; Fabrizio Garrone and Judit Szanto .........................................................805

Cybersecurity of SCADA Systems: Vulnerability Assessment and Mitigation
Chen-Ching Liu; Chee Wooi Ten and Manimaran Govindarasu....................................................808

Reliability Impacts from Cyber Attack on Electric Power Systems
Jason Stamp; Annie McIntyre and Bryan Richardson .................................................................811

Research Frontiers for the Smart Grid: University-Industry Partnership

Chair: Mladen Kezunovic, Texas A&M University
Sponsor: Power Engineering Education

Substation Automation Research Frontiers
Mladen Kezunovic ..................................................................................................................819

Wide-Area Monitoring and Control Algorithms for Large Power Systems
Using Synchrophasors
Mani Venkatasubramanian; Xunning Yue; Guoping Liu; Michael Sherwood and Qiang Zhang .........................................................821

Transmission System Visualization for the SmartGrid
Thomas Overbye ...................................................................................................................826

Industry Perspectives on University Research Programs
Jay Giri .................................................................................................................................828

Department of Energy/University Research: A Smart Partnership for a Smart Grid
Philip Overholt ..................................................................................................................829

Cyber-Physical System Security - Methods

Chair: Manimaran Govindarasu, Iowa State University
Sponsor: Power System Analysis, Computing, and Economics

Enterprise Architecture Models for Cyber Security Analysis
Mathias Ekstedt and Teodor Sommestad ..................................................................................832
Modeling Cyber and Physical Interdependencies – Application in ICT and Power Grids
Nouredine Hadjsaid; Carolina Tranchita; Benoit Rozel; Maria-Georgetta Viziteu
and Raphael Caire .................................................................................................................. 838

Analyzing NASPInet Data Flows
Ragib Hasan; Rakesh Bobba and Himanshu Khurana .......................................................... 844

Cyber Security of the Electric Power Grid
Jeff Dagle .................................................................................................................................. 850

Demand Response at ISOs under Smart Grid

Chair: Farrouk Rahimi, OATI
Sponsor: Power System Operations

Demand Response under the SmartGrid Paradigm
Farrokh Rahimi .......................................................................................................................... 852

Overview of Demand Response at Different ISO/RTOs
Farrokh Rahimi .......................................................................................................................... 853

PG&E Perspective on Demand Response under the Smart Grid Paradigm
Kenneth Abreu .......................................................................................................................... 855

Integrating Demand Response into Wholesale Electricity Markets
Elizabeth Reid; Spence Gerber and Parviz Adib ..................................................................... 857

Effective Business Models for Demand Response under the SmartGrid Paradigm
Arthur Vos ................................................................................................................................... 858

Smart Grid of the Future with Large Scale DR/DER Penetration
Ali Ipakchi .................................................................................................................................. 859

Distribution System Planning and Management

Chair: Robert Fletcher, Snohomish County PUD
Sponsor: Power System Planning and Implementation

Supervisory Control and Energy Management of an Inverter-based Modular Smart Grid
Alaa Mohd; Egon Ortjohann; Worpong Sinsukthavorn; Max Lingemann; Nedzad Hamsic and Danny Morton .................................................................................................................. 860

The Distributed Generator Placement and Sizing Test Suite and Analysis Tool
Adam Berry; David Cornforth and Glenn Platt ........................................................................ 866

Opportunities for Active DER Management in Deferral of Distribution System Reinforcements
Edwin Haesen; Arturo Alarcon-Rodriguez; Johan Driesen; Ronnie Belmans and Graham Ault .................................................................................................................. 875

A Novel Approach to Disco Planning in Electricity Markets: Mathematical Model
Ayed Algarni and Kankar Bhattacharya ................................................................................... 883
Assessing the Value of Distribution Infrastructure Replacement
Zoilo Roldan; Shan (Sam) Chien and Roger Lee ................................................................. 888

**Track 6: Non Track Session**

**Analytical Methods 1**

Chair: Chan-Nan Lu, National Sun Yat-Sen University
Sponsor: Power System Analysis, Computing, and Economics

Using a Support Vector Machine (SVM) to Improve Generalization Ability of Load Model Parameters
Jian Ma; ZhaoYang Dong and Pei Zhang................................................................. 895

A Reduced-Order Estimator with Prescribed Degree of Stability for Two-Area LFC System in a Deregulated Environment
Elyas Rakhshani and Javad Sadeh................................................................. 903

Estimation Method of Load Type and Capacity by Using Starting Load Characteristics
Naoki Gibo; Toshiaki Kikuma; Kiyoshi Takenaka; Ryousuke Hatano and Nobuyuki Yamamoto ................................................................. 911

Robust Three Phase Fast Decoupled Power Flow
Pradeep Bijwe; Abhijith B. and G. Kasi Viswanadha Raju......................................... 917

**Co-optimizing Energy and Ancillary-Service Markets: Lessons Learned**

Chair: Khai Lee, PCI
Sponsor: Power System Operations

Co-Optimizing Energy and Ancillary Services in RTO Markets: Field Experience and Lessons Learned
Khai Le ....................................................................................................................... 922

Experience with Implementing Simultaneous Co-Optimization in the Midwest ISO Energy and Operating Reserve Markets
Matthew Tackett ........................................................................................................ 924

FirstEnergy's Experience with Operating Genco Assets in New MISO Ancillary-Service Market
Ronald Palcic and Renee Tumbleson ....................................................................... 926

Using Co-Optimization to Clear Energy and Ancillary Services in MRTU Market
Mark Rothleder ........................................................................................................ 927

Experience with Bidding Ancillary Services in ERCOT: A Modeler's Perspective
Charles Noble ........................................................................................................ 929

Experience with Ancillary Services in ISO New England's LMP Markets
Eugene Litvinov; Ronald Coutu and Tongxin Zheng .................................................. 931
Developments in Power System Operations

Chair: Edward Dobrowolski, NERC
Sponsor: Power System Operations

Unified Implementation Framework for Calculation and Allocation of Expected Energy
Dingguo Chen; Brian Johnson and Mike York ................................................................. 933

A Generic Operations Framework for Discos in Retail Electricity Markets
Ayed Algarni and Kankar Bhattacharya ........................................................................... 943

A Probabilistic Risk Assessment Approach to Support the Operation of Large Electric
Power Systems
Emanuele Ciapessoni; Diego Cirio; Stefano Massucco; Andrea Pitto
and Federico Silvestro ........................................................................................................ 944

The Problem of Initiating Controlled Islanding of a Large Interconnected Power System
Solved as a Pareto Optimization
Vijay Vittal and Gerald Heydt ......................................................................................... 952

An Immune System Approach for Power System Automation and Self Healing
Rabie Belkacemi and Ali Feliachi .................................................................................... 959

Nomograms for Assistance in Voltage Security Visualization
Hector Sarmiento; Gabriela Pampin; Raul Barajas; Rafael Castellanos;
Gustavo Villa and Manuel Mirabal .................................................................................. 966

Electric Machinery & Applications

Chair: Professor Osama Mohammed, Florida International University
Sponsor: Electric Machinery

The Technique of Clustering Analysis of Partial Discharge.
Oleg Agamalov ................................................................................................................. 972

Inspection Enhancement of Wind Turbine Blades Using Novel
Signal-Processing Approaches
Chin-Shun Tsai; Shyh-Jier Huang and Cheng-Tao Hsieh ................................................ 981

On Line Synchronous Generator Parameters Estimation Based on Applying Small
Disturbance on Excitation System Using ANN
Mehdi Rahimpour; Mohammad Ali Talebi; Heydar Ali Shayanfar
and Mohammad Reza Azad Hosseini .............................................................................. 988

A New, Ultra Low Cost Power Quality and Energy Measurement Technology - The
Future of Power Quality Monitoring
Alex McEachern and Andreas Eberhard .......................................................................... 992
FACTS

Chair: Kala Meah, York College of Pennsylvania
Sponsor: Power System Dynamic Performance

Simplified Dynamic Model of a Voltage-Sourced Converter with Modular Multilevel Converter Design
Simon Teeuwsen

Dynamic Performance of the New 400 kV Storebaelt HVDC Project
Simon Teeuwsen; Carsten Rasmussen and Hans Abildgaard

Application of a HVDC Link to Promote Stability by Sharing Dynamic Reserve Power after Generation Deficiencies
Shaukat Sadullah and Ahmed Ebrahim

Design of Integrative Fuzzy Logic Damping Controller of VSC-HVDC
Sheng Li; Jianhua Zhang; Guohua Zhang; Jingfu Shang; Mingxia Zhou and Yinhui Li

Simulation Study of the CIGRE HVDC Benchmark Model with the WSCC Nine-bus Power System Network
Kala Meah and A.H.M. Sadrul Ula

Optimal Placement and Signal Selection for Wide-Area Controlled UPFCs for Damping Power System Oscillations
Mahyar Zarghami and Mariesa Crow

Optimal Placement of FACTS Devices for Multi-Objective Voltage Stability Problem
Rabah Benabid; Mohamed Boudour and M. A. Abido

Simulation Recurrence of a Realistic DC Line Fault Based on RTDS and Its Simulation Reliability Analysis
