Seismic Strengthening of Concrete Buildings Using FRP Composites

Session at the 2007 ACI Spring Convention
ACI Special Publications Series SP-258

Atlanta, Georgia
22-26 April 2007

# TABLE OF CONTENTS

**SP-258—1**
Seismic Retrofit of Reinforced Concrete Beam-Column T-Joints in Bridge Piers with FRP Composite Jackets
by C.P. Pantelides and J. Gergely

**SP-258—2**
Performance of an RC Corner Beam-Column Joint Severely Damaged under Bidirectional Loading and
Rehabilitated with FRP Composites
by M. Engindeniz, L.F. Kahn, and A.-H. Zureick

**SP-258—3**
Experimental Evaluation of Noncircular Reinforced Concrete Columns Strengthened with CFRP
by S. Rocca, N. Galati, and A. Nanni

**SP-258—4**
Structural Upgrade of Reinforced Concrete Column-Tie Beam Assembly using FRP Composites
by A.S. Mosallam

**SP-258—5**
Providing External Confinement to Flexural Members to Improve Ductility—The Good, the Bad, and the Ugly
by A. Budek and G. Benzoni

**SP-258—6**
CFRP-Confined Reinforced Concrete Elements Subjected to Cyclic Compressive Loading
by J.A.O. Barros, D.R.S.M. Ferreira, and R.K. Varma

**SP-258—7**
Hysteretic Rotation Model HRM4 for CFRP-Strengthened Joints
by P.F. Silva

**SP-258—8**
Effect of Bond Properties on the Behavior of FRP-Strengthened RC Girders Subjected to Monotonic and Cyclic
Loads
by F. Lu and A. Ayoub
