# TABLE OF CONTENTS

**VOLUME 1**

## BRIDGE AND TRANSPORTATION STRUCTURES 1

### BRIDGE DESIGN PRACTICE

1. **183A Turnpike: A Design-Build Success Story**
   - Lisa Carter Powell, Arthur Champlin
   - Page: 1

2. **Effectiveness of Bent Plate Connection for End Cross-frames in Skewed Steel Bridges**
   - Anthony Battistini, Craig Quadrate, Todd Helwig, Michael Engelhardt, Karl Frank
   - Page: 11

3. **Safety Issues for Performance Based Design of High-speed MAGLEV Guideway Structures**
   - Thomas T. Baber
   - Page: 21

4. **Trapezoidal Steel Box Girder Design for Spur 366 Extension Project**
   - Yingqin Jin, Chris M. Gilstrap, Charles E. Quade
   - Page: 27

### DESIGN AND ANALYSIS OF BRIDGES

5. **A Novel Approach to Analyze Existing Bridges Efficiently**
   - F. Necati Catbas, H. Burak Gokce
   - Page: 37

6. **Numerical Investigation of River Ice-Bridge Pier Interaction**
   - Feng Xiong, Gang Xu
   - Page: 48

7. **Three-Dimensional Wind Correlation: Estimations from In-Situ Measurements**
   - Ferawati Gani, Louis-Philippe Parent, Frederic Legeron, Stoyan Stoyanoff, Pierre Van Dyke
   - Page: 58

### BRIDGE CONSTRUCTION ISSUES

8. **A Method to Calculate Rotational Deformations of Curved Plate Girders During Lifting**
   - Jason Stith, Andrew Schuh, Jamie Farris, Todd Helwig, Eric Williamson, Karl Frank, Michael Engelhardt
   - Page: 68

9. **Construction Control of a Self-Anchored Suspension Bridge with Space Reticulate Cable**
   - Tan Yong-Gang, Zhao Xu, Zhang Zhe
   - Page: 78

10. **Rehabilitating a Historic Wooden Covered Bridge to Carry Modern Truck Loads with No Visual Impacts to the Structure**
    - James Pezzotti
    - Page: 89

### BRIDGE MONITORING AND SERVICEABILITY

11. **Finite Element Model Updating of Scale Bridge Model Using Measured Modal Response Data**
    - Masoud Sanayei, Christopher DiCarlo
    - Page: 98

12. **Structural Health Monitoring of Bridges: Fundamentals, Application Case Study and Organizational Considerations**
    - F. Necati Catbas, Mustafa Gul, Ricardo Zaurin, Thomas Terrell, Yunus Dere, Marcus H. Ansley, Dan M. Frangopol, Kirk A. Grimmelsman
    - Page: 108

13. **Structural Identification of Bridges to Assess Safety and Performance**
    - Jeffrey Weidner, John Prader, Nathan Dubbs, Franklin Moon, A. Emin Akta
    - Page: 119

### INNOVATIONS IN BRIDGE STRUCTURAL DESIGN

14. **Field Measurements on Steel Girder Bridge with Skewed Supports Utilizing Lean-On Bracing**
    - Jeremiah Fast, Michelle Romage, Todd Helwig, Reagan Herman, Karl Frank
    - Page: 125

15. **Forty Foot Pedestrian Bridge - Aesthetics Integral to Structure**
    - William Collins, John Ruff, Kristen York, Bashar S. Qubain
    - Page: 135
FEATURED BRIDGES IN TEXAS

Current State of Segmental Bridge Design/Construction in Texas .................................................................................................................. 145
  Michael D. Hyzak, Amy E. Eskridge, Dean Van Landuyt, David P. Hohmann, Brian Merrill, Jon F. Holt

Lake Lewisville Passage Span Bridge ............................................................................................................................. 155
  Wally R. Burns, David McDonnell

Margaret Hunt Hill (Woodall Rodgers) Bridge ..................................................................................................................... 164
  Scott Lomax, Charles E. Quade

BRIDGE SUPERSTRUCTURE ANALYSIS

FEM Analysis and Field Vibration Testing of a Multispan Curved Girder Bridge ................................................................. 174
  Thomas T. Baber, John C. Lydzinski, Robert S. Turnage

Rolling Tire Functions for Finite Element Models .............................................................................................................. 183
  P. Bradford

Safety Evaluation of Seismic Behaviour of the Bill Emerson Memorial Cable-Stayed Bridge ........................................... 193
  Dongming Yan, Genda Chen

Secondary Moments of Continuous Prestressed Concrete Beams Using Closed Form Equation ...................................... 203
  Venketaramani Tiruchirapalli, Riyadh Hindi

BRIDGE SUBSTRUCTURES ANALYSIS

Curved Integral Abutment Bridges - Thermal Response Predictions Through Finite Element Analysis .......................... 213
  Emre Kalayci, Sergio F. Brena, Scott A. Civjan

Non-Linear Finite Element Analysis of RC Bridge Columns using the Softened Membrane Model .................................. 223
  T. R. S. Multapudi, Ashraf Ayoub

Seismic Design and Ductility Evaluation of Partially Concrete-Filled Steel Box Columns .................................. 233
  Iraj H. P. Mamaghani

BRIDGE MATERIAL ISSUES

Mechanical Properties of Hot-Dip Galvanized Steel ........................................................................................................... 243
  Thomas J. Langill

Metal Straps as Soil Reinforcement on Full Height Abutments ..................................................................................... 249
  Wendy Haugeto, Mike Yang, Arjuna Ranasinghe

On the Effect of Ductility of Confining Material on Concrete Ductility ........................................................................ 259
  Hasan A. Moghaddam, Maysam Samadi

Using Steel Fiber Reinforced Concrete in Post-Tensioned Anchorage Zones ............................................................. 270
  Brenda Robinson, Kamal S. Tawfiq, Nur Yazdani

SAFETY OF BRIDGES

Central Artery/Tunnel Project-wide Post-tensioning Tendon Grout Void Assessment ............................................... 280
  Travis Green, Mark Moore, Gary Klein

Evaluation of Behavior of a Laterally Loaded Bridge Pile Group under Scour Conditions ...................................... 290
  Caroline R. Bennett, Cheng Lin, Robert Parsons, Jie Han

Saving Our Infrastructures ........................................................................................................................................ 300
  Lung-Yang Lai, Peter Kim, Tony Jen

Seismic Vulnerability of Bridges Susceptible to Spatially Distributed Soil Liquefaction Hazards .................................. 305
  Bayram Aygun, Leonardo Duenas-Osorio, Jamie E. Padgett, Reginald DesRoches
## HISTORIC BRIDGE PRESERVATION: STATE PROGRAMS AND CASE STUDIES

- **Conversion of the 1.25 Mile Long Poughkeepsie-Highland Railroad Bridge into a Multi-Use State Park using the Public-Private Partnership Process**
  
  Peter Melewski, John Brizzell, Mike Cooper

- **Minnesota's Preservation of State-owned Historic Bridges for Long-term Transportation Use**
  
  Robert M. Frame, Steven A. Olson, Amy Squitieri

- **Preserving Historic Bridges: Strategies to Overcome Obsolescence**
  
  Charles E. Walker

- **Rehabilitation of the Historic Hays Street Viaduct in San Antonio, Texas**
  
  S. Patrick Sparks

## REHABILITATION OF HISTORIC BRIDGES: EXAMPLES FROM PRACTICE

- **Rehabilitation of the Beveridge Suspension Bridge**
  
  Charles E. Walker

- **Ultrasonic Study at Cimarron Narrow-Gauge Railroad Bridge**
  
  Bradley D. VanOtterloo, Frederick R. Rutz, Kevin L. Rens

- **Kings Covered Bridge Rehabilitation, Somerset County, PA**
  
  William J. Collins, Samer H. Petro

- **Retrofit Railings for Historic Metal Truss Bridges**
  
  William F. Williams

## THE ROLE OF STRUCTURAL IDENTIFICATION IN INFRASTRUCTURE DECISION MAKING

- **Experiences in Testing and Modeling for Bridge Maintenance and Rehabilitation**
  
  Harry W. Shenton III, Michael J. Chajes

- **Parametric Bootstrap for System Identification of a Scaled Reinforced Concrete Bridge**
  
  Shamim N. Pakzad, Matthew Dryden, Gregory L. Fenves

- **Title: Accounting for the Impact of Thermal Loads in Nondestructive Bridge Testing**
  
  Erin Santini Bell, Jesse D. Sipple

- **Structural Identification of Various Constructed Systems to Inform Decisions**
  
  Franklin Moon, A. Emin Aktan, David Lowdermilk, Lawrence Egan

## THE FHWA'S LONG TERM BRIDGE PERFORMANCE (LTBP) PROGRAM: ORGANIZATION, TEAMBUILDING, DIRECTION

- **Development of Data Infrastructure for the Long Term Bridge Performance Program**
  
  Mathaeus Dejori, Hassan H. Malik, Fabian Moerchen, Nazif C. Tas, Claus Neubauer

- **Long Term Bridge Performance Program: Identifying Long Term Bridge Performance Data Priorities**
  
  Michael C. Brown, Maureen L. Hammer, John M. Hooks

- **LTBP Bridge Monitoring, Testing and Instrumentation**
  
  Paul J. Barr, Marvin W. Halling, Tommy E. Cousins, Carin L. Roberts-Wollmann, Elisa D. Sotelino

- **Meeting LTBP Program Objectives through Periodical Bridge Condition Monitoring by Nondestructive Evaluation**
  
  Nenad Gucunski, Sabine Kruschwitz, Ruediger Feldmann, Carl Rascoe

## USE OF RISK AND RELIABILITY IN BRIDGE INSPECTION

- **Relative Risk Assessment of Cable-Supported Structures**
  
  Brian J. Leshko

- **Risk-based Bridge Evaluations - A Texas Perspective**
  
  Alan Kowalik
INSPECTION AND MAINTENANCE OF BRIDGES

A Comparison of AASHTO Bridge Load Rating Methods ................................................................. 472
Cristopher D. Moen, Leo Fernandez

Creating a Bridge Inspection Program ............................................................................................. 480
Deborah Steinberg

Managing Premature Concrete Deterioration in Bridges ................................................................. 485
Mark E. Williams, Dilip Choudhuri

The Changing World of Underwater Bridge Inspections ................................................................. 491
Jeffrey B. Rowe

CABLE SUPPORTED BRIDGES

Luling Bridge Stay Cable Replacement ............................................................................................. 498
Armin B. Mehrabi

Newport/Pell Bridge Main Cable Investigation and Anchorage Dehumidification .............................. 508
Roger Haight, Debra Moolin, Peter Janaros

Replacing Stay-Cables of the Rhine River Bridge Rheinbrucke Flehe without Traffic Interruption .... 518
Gero A. Marzahn, Sven Sieberth, Stefan Gurtmann

Stay Cable Vibration Testing at the Leonard P. Zakim Bunker Hill Memorial Bridge ....................... 528
Travis Green, Mark Moore, W. Robert Hannen

BRIDGE VULNERABILITY TO EXTREME HAZARDS

A Probabilistic Model for the Estimation of Shear Capacity of Bridge Piers Subjected to Dynamic Loading ................................................................................................................................. 537
Hrishikesh Sharma, Stefan Hurlebaus, Paolo Gardoni

Multi-Hazard Consideration of Seismic and Aging Threats to Bridges .............................................. 547
Jayadipta Ghosh, Jamie E. Padgett

Storm Surge and Wave Loading on Bridge Superstructures ............................................................... 557
Justin Marin, D. Max Sheppard

BUILDINGS

STRUCTURAL DESIGN PERFORMANCE AND SERVICEABILITY

Enhancing the Structural Performance of a Slender Residential Tower Using Supplemental Damping System .......................................................................................................................................................... 567
Bujar Myslimaj, Jamieson Robinson, Andrew Smith, Stephen DeSimone, Christopher Cerino, Ashley Byrne

Floor Response Spectra for Frame Buildings under Ultimate and Serviceability Limit States ............... 577
S. R. Uma, John Zhao, Andrew King

Performance-Based Design for Motion Control of a Supertall Tower .................................................. 587
Scott Gamble, Jamieson K. Robinson, Rabih Alkhatib, Andrew Smith, Trevor Hasket, Joseph Burns, David McLean

Probabilistic Assessment of Occupant Comfort in Tall Buildings .......................................................... 599
Rachel Bashor, Ahsan Kareem

THE DIRECT ANALYSIS METHOD: RECENT DEVELOPMENTS AND APPLICATIONS

Direct Analysis Method Case Study - Addressing Stability for the Russia Tower .................................... 609
Robert A. Halvorson, Carrie Warner, Alex Lang

Interface of the Direct Analysis Method and Seismic Design .............................................................. 619
Taichiro Okazaki, Mathew Parkolap, Larry A. Fahnestock

Three-dimensional Verification and Application of the Direct Analysis Approach .................................. 627
Andrea E. Surovek, Bulent N. Alemadar, Aaron J. Hartwell
STRUCTURAL FIRE RESISTANCE DESIGN I

Effect of Restraint Force Location on the Response of Steel Beams Exposed to Fire ................................................................. 632
Mahmud Dwaikat, Venkatesh Kodur

Modified Connection Details for Single Plate Steel Connections under Fire ................................................................. 642
Serdar Selamet, Maria E. Garlock

Numerical Study of the Fire Resistance of Steel Columns in Axial Compression and Uniform Bending .......................... 650
Didier Talamona

Stress-Strain Relationships for Concrete at Elevated Temperatures ............................................................................. 660
Adam Knaack, Yahya Karama, David Kirkner

STRUCTURAL FIRE RESISTANCE DESIGN II

Behavior of High Strength Concrete Columns under Design Fire Scenarios ................................................................. 670
Nikhil Raut, Venkatesh Kodur

Simple Approach for Calculating Inelastic Deflections of Simply Supported Steel Beams under Fire ...................... 680
Shahid Iqbal, Mahmud Dwaikat, Ronald S. Harichandran

Stability Behavior of Steel Building Structures with Perimeter MRFs under Fire Loading Effects .............................. 687
Anil Agarwal, Amit H. Varma, Guillermo Cedeno

ADVANCES IN WIND ENGINEERING PRACTICE AND RESEARCH FOR TALL BUILDINGS

Effects of Structural and Aerodynamic Couplings on the Dynamic Response of Tall Twin Buildings with a Skybridge ........................................................................................................... 697
Juntack Lim, Bogusz Bienkiewicz

Wind Engineering for Louisville Museum Plaza ................................................................................................................. 706
J. Andrew Fry, Daryl Boggs, Kevin Solberg, Brian Morgen

Wind Engineering Studies for Super-tall Buildings ........................................................................................................... 716
Jiming Xie, Derek Kelly

VOLUME 2

DESIGN AND SPECIFICATION OF COLD-FORMED STEEL FOR THE PRACTICING ENGINEER

Design and Specification of Standing Seam Roof Panels and Systems .............................................................................. 726
W. Lee Shoemaker

Design and Specification of Metal Studs ................................................................................................................................. 736
Don Allen

COLLAPSE PREVENTION DESIGN OF STEEL BUILDINGS FOR MODERATE SEISMIC REGIONS I: CONNECTIONS

Origins of R=3 ........................................................................................................................................................................ 746
Charles J. Carter

Cyclic Behavior and Performance of Beam-Column Connections in Concentrically Braced Frames .................................. 756
Larry A. Fahnestock, Christopher D. Stoakes

Vertical Bracing Connections for Moderate Seismic Demands ........................................................................................ 764
Larry S. Muir, William A. Thornton

COLLAPSE PREVENTION DESIGN OF STEEL BUILDINGS FOR MODERATE SEISMIC REGIONS II: SYSTEMS

Building Design for Moderate Seismic Regions ................................................................................................................ 774
Peter J. Cheever, Eric M. Hines

Eccentric Braced Frame Design for Moderate Seismic Regions ......................................................................................... 784
Eric M. Hines
Robert Tremblay, Pierre X. Castonguay, Kim Guillini-Charette, Sanda Koboevic

Steel-Framed Rocking Structural Systems for Moderate Seismic Zones
Matthew Eatherton, Jerome F. Hajjar, Gregory G. Deierlein, Xiang Ma, Sarah Billington, Helmut Krawinkler

RESEARCH ADVANCES 1

FUNCTIONALLY UPGRADED PASSIVE DEVICES I

Definition and Examples of Functionally Upgraded Passive Devices
Genda Chen

Effectiveness of Partial Isolation of Bridges for Improving Column Performance
Keri L. Ryan, Wenying Hu

Fundamental Frequency of Water Sloshing Waves in a Sloped-Bottom Tank as Tuned Liquid Damper
Meziane Idir, Xiaohua Ding, Genda Chen

Seismic Isolators of Variable Stiffness for Earthquakes with Strong Long-period Components
Lyan-Ywan Lu, J-Ling Yeh, Hsun Chang

FUNCTIONALLY UPGRADED PASSIVE DEVICES II

Structural Control Using Functionally Upgraded Spring-Damper Isolator Having Integral Gapping Elements
Douglas P. Taylor, John C. Metzger

Experimental Study on the Seismic Performance of a Large-scale TLD Model with Sloped Bottoms
Xiaohua Ding, Meziane Idir, MengLin Lou, GenDa Chen

Variation of Supplemental Stiffness and Damping using Adjustable Passive Fluid Spring and Damper in Scissor Jack System
Satish Nagarajaiah, Douglas Taylor, J. Dyck

NON BUILDING AND SPECIAL STRUCTURES 1

DESIGN OF TENSIONED FABRIC STRUCTURES

"Archineering" Trends for Tensioned Fabric Structures
Wilfried Laufs, Thornton Tomasetti

Design of Connections for Tensioned Fabric Structures
Craig G. Huntington

Loading Considerations for Tensioned Fabric Structures
David M. Campbell

Modeling of Tensioned Fabric Structures
Michael W. Ishler

TENSILE MEMBRANE STRUCTURES

Architectural Membranes used for Tensile Membrane Structures
Frank Bradenburg

Structural Fabric Tear Propagation
Wayne Rendely

DESIGN OPTIONS FOR HEAVY INDUSTRIAL STRUCTURES

Buckling Restrained Braced Frame Application for a Power Plant
Harold O. Sprague
Design of Modular Composite Walls Subjected to Thermal and Mechanical Loading ................................................................. 928
S. R. Malushte, P. N. Booth, A. H. Varma

Use of Concrete Filled Tube (CFT) Vertical Braces in a Moderate/High Seismic Area .......................................................... 936
John W. Oleksik, Tim M. Gilbert, Sanjeev R. Malushte

CONCRETE COOLING TOWERS

From Cooling Towers to Chimneys of Solar Upwind Power Plants ................................................................................. 944
Reinhard Harte, Wilfried B. Kraetzig, Hans-Jurgen Niemann

New German Natural Draft Cooling Towers for High-efficient Power Generation .................................................. 954
Ulrich Eckstein, Reinhard Harte, Wilfried B. Kraetzig, Ralf Woermann

DESIGN AND EVALUATION OF CONCRETE INDUSTRIAL CHIMNEYS

An Investigation on Seismic Resistance of Reinforced Concrete Industrial Chimneys .................................................. 964
Necip Onder Akinci

Evaluation of Concrete Chimneys Designed According to ACI 307 Standard ................................................................. 972
Javeed Munshi, Sungjin Bae, Carlos Coronado, Jie Li, Osama Ali

The New ACI 307-08 Chimney Code - Seismic Design Requirements ........................................................................ 982
Shu-jin Fang, Bob Porthouse

Nonlinear Analysis of a Collapsed Reinforced Concrete Chimney ............................................................................. 994
Phillip L. Gould, Wei Huang

SEISMIC DESIGN AND ANALYSIS OF SPECIAL STRUCTURES

Seismic Behavior Considerations for Jumbo Container Cranes ......................................................................................... 1000
Benjamin D. Kosbab, Roberto T. Leon, Reginald DesRoches

Seismic Hazard Mitigation of Wine Barrel Stacks ........................................................................................................... 1010
Charles Chadwell, Kyle Brennan, Matthew Porter

Simplified Dynamic Analysis Methods for Guyed Telecommunication Masts Under Seismic Excitation ............. 1020
S. Ali Ghaafari Oskoei, Ghyslaine McClure

LOCAL RESEARCH

HIGHLIGHTS OF RESEARCH IN TEXAS – CONCRETE STRUCTURES

Experimental Investigation of Full-Depth Precast Overhang Panels for Concrete Bridge Decks ............................ 1030
Thomas J. Mander, Matthew D. Henley, Reece M. Scott, Monique Hite Head, John B. Mander, David Trejo

Mechanical Properties of Steel Fiber Reinforced Concrete Beams ......................................................................... 1039
Padmanabha Rao Tadepalli, Y. L. Mo, Thomas T. C. Hsu, John Vogel

Shear Capacity of Large-Scale Bridge Bent Specimens Subject to Alkali-Silica Reaction and Delayed Ettringite Formation ............................................................................................................ 1049
Dean Deschenes, Oguzhan Bayrak, Kevin Folliard

Shear Strength of Steel Fiber Reinforced Prestressed Concrete Beams .......................................................................... 1058
Jae-Sung Cho, Joe Lundy, Shih-Ho Chao

Elevated Temperature Properties of ASTM A992 Steel ................................................................................................. 1067
Guanyu Hu, Mohammed Ali Morovat, Jinwoo Lee, Eric Schell, Michael Englehardt

HIGHLIGHTS OF RESEARCH IN TEXAS – PERFORMANCE BASED DESIGN, LOSS, AND DAMAGE ASSESSMENT

Loss Model for Seismically Damaged Structures .............................................................................................................. 1077
John B. Mander, Jytirarnoy Sircar

NSF Nees Small-Group Project on Performance-based Design of Masonry and Masonry Veneer ......................... 1087
Seongwooo Jo, Hussein Okail, Richard E. Klingner, W. Mark McGinley, P. Benson Shing

Realtime Damage Detection in Buildings using Filter Based Radial Basis Function Network Mapping ............ 1097
Michael Contreras, Sattish Naragajati, Sriram Narasimhan
RESEARCH ADVANCES 2

BLAST TO PROGRESSIVE COLLAPSE – COMPONENT VS. SYSTEM ANALYSIS
AND DESIGN

Developing Rational and Efficacious Blast-Resistant Design Methodologies ................................................................. 1107
John E. Crawford

Localized Damage Effects on Building Robustness ................................................................................................. 1117
Theodor Krauthammer, H. C. Yim

Methodologies for Progressive Collapse Analysis ................................................................................................. 1126
Steven W. Kirkpatrick, Robert MacNeil, Joseph L. Smith, Kenneth Herrle, Mikhail Erekson

BLAST RESPONSE WALLS

Blast Design of Stay-In-Place PVC-Formed Concrete Walls ....................................................................................... 1136
Hani Salim, Aaron Saucier, John Hoemann, Robert Dinan

Blast Response of Conventional and High Performance Reinforced Concrete Panels .............................................. 1142
Stephen D. Robert, Carol F. Johnson

Load-Impulse Diagrams for Protected Facility Assessment ............................................................................................. 1151
Theodor Krauthammer, Serdar Astarlioglu, Joseph R. Blasko

Response and Analyses of Multi-wythe Insulated Masonry Walls to Out-of-Plane Dynamic Pressure .................. 1162
Robert S. Browning, James S. Davidson, Robert J. Dinan

RESEARCH ADVANCES 3

HEALTH MONITORING AND SENSOR NETWORKS

Blind Identification of Civil Structures .......................................................................................................................... 1172
Budhaditya Hazra, Aaron J. Roffel, Sriram Narasimhan, Mahesh Pandey

Modal Identification and Damage Detection for Structural Health Monitoring Under Ambient Vibration Environment ............................................................... 1181
Gun Jin Yun

Modal Parameter Identification of MDOF structures based on vibration test ......................................................... 1191
Hongjin Kim, Ji-Woo Park, Jee-Hoon Lee, Jae-Seung Hwang, Ji-Seong Jo

Development of Quasi-Static Loading Protocols for Drift-Sensitive Nonstructural Building Components ............................................................... 1201
Behrouz Shafei, Farzin Zareian

FEM Analysis of Interaction Effects of 3-D RC Members Subjected to Multi-Directional Cyclic Loading .................. 1209
Hiroshi Noguchi, Takashi Kashiwazaki

FUNDAMENTAL, ANALYTICAL, AND THEORETICAL ADVANCES

Gusset plate connections in Concentrically Braced Steel Structures ................................................................. 1219
Azadeh Alipour

Optimization In Structural Analysis And Design ......................................................................................................... 1229
Y. Cengiz Toklu

Resistance Definition for Membrane Retrofit Concrete Masonry Walls Subjected to Blast .................................. 1239
Lee Moradi, James Davidson, Robert Dinan
EXISTING BUILDINGS 1

EXTREME EVENT LOADING

A Fiber-Based Heat Transfer Element for Modeling the Thermal Response of Structural Members Subjected to Fire ................................................................. 1249
Ann E. Jeffers, Elisa D. Sotelino

Dynamic Energy based Method for Progressive Collapse Analysis .................................................. 1259
Stefan Szyniszewski

Modeling Performance of Residential Wood Frame Structures Subjected to Hurricane Storm Surge ....... 1269
Carol J. Friedland, Ayman M. Okeil, Marc L. Levitan

Response of Concrete Masonry Walls to Simulated Blast Loads ......................................................... 1277
Michael G. Oesterle, Gilbert A. Hegemier, Kenneth B. Morrill

DESIGN OF BUILDINGS FOR EXTREME LOADS

Anatomy of Damage to Coastal Construction: A Multi-Hazard Perspective ........................................ 1287
Megan McCullough, Ahsan Kareem

Blast Performance of Prestressed Concrete Panels .............................................................................. 1297
David A. Dunkman, Ali E. Abu Yousef, Pranav M. Karve, Eric B. Williamson

Common Misconceptions in Determining Wind/Water Damage Causation .................................. 1307
J. Arn Womble, Douglas A. Smith

Energy Limit States and Maximum Mullion End Rotations for Nearly-Conventional Curtain Walls Subjected to Extreme Out-of-Plane Loads ................................................................. 1317
Benjamin T. Kennedy, David C. Weggel

BUILDINGS/RESEARCH ADVANCES 4

SEISMIC DESIGN OF CONCRETE STRUCTURES

Effects of Loading Parameters on the Behavior of Unbonded Post-Tensioning Strand/Anchorage Systems in Seismic Regions ................................................................. 1327
Kevin Q. Walsh, Yahya C. Kurama

Experimental Evaluation of Post-Tensioned Precast Concrete Coupling Beams ................................ 1337
Brad D. Weldon, Yahya C. Kurama

Seismic Damage Evaluation for Low-Rise RC School Buildings in Taiwan ........................................ 1347
Yi-Hsuan Tu, Pei-Lin Yeh, Tzu-Wei Liu, Wen-Yu Jean

SEISMIC DESIGN OF STEEL STRUCTURES

Comparative Study of Bolted Versus Welded SCBF Connections ......................................................... 1357
Robert P. Krumpen III, Peter J. Carrato

Earthquake Simulations on a Self-Centering Steel Moment Resisting Frame with Web Friction Devices .................................................................................................................. 1364
Ying-Cheng Lin, James Ricles, Richard Sause, Choung-Youl Seo

Role of Yield Mechanism Selection on Seismic Behavior of Steel Moment Frames Designed by Performance-Based Plastic Method ................................................................. 1374
Subhash C. Goel, Sachi Furukawa

SEISMIC FRAGILITY OF STRUCTURES WITH PROTECTIVE SYSTEMS

Analytical Fragility Models for Box Girder Bridges With and Without Protective Systems .................. 1383
Chuang-Sheng Yang, Reginald DesRoches, Jamie E. Padgett

Energy-Based Seismic Fragility Analysis of Actively Controlled Structures ........................................ 1393
Kevin K. F. Wong

Seismic Performance and Retrofit for Tilt-Up Concrete Buildings in Mid-America ................................. 1403
Jong-Wha Bai, Mary Beth D. Hueste, Paolo Gardoni
NEW OPTIONS FOR LATERAL RESISTANCE SYSTEMS IN STEEL BUILDINGS

An Overview of Self-Centering Steel Moment Frames
Gordana Herning, Maria M. Garlock, James Ricles, Richard Sause, Jie Li
................................................................................................................................. 1412

Design Concepts for Damage-Free Seismic-Resistant Self-Centering Steel Concentrically Braced Frames
David Roke, Richard Sause, James M. Ricles, Nathaniel Gonner
................................................................................................................................. 1421

Design of Lateral Load Resisting Frames Using Steel Joists and Joist Girders
Perry S. Green, James M. Fisher, Joe Pote
................................................................................................................................. 1431

Lateral Resistance Using Steel Slit Panel Frames (SSPFs)
Gustavo Cortes, Judy Liu
................................................................................................................................. 1447

VOLUME 3

TALL BUILDINGS

CHALLENGES OF DESIGNING SUPER TALL BUILDINGS WITH CURRENT TECHNOLOGIES

555m Tall Lotte Super Tower, Seoul, Korea
Charles Besjak, Bonghwan Kim, Preetam Biswas
................................................................................................................................. 1452

Russia Tower: Design Challenges
Robert A. Halvorson
................................................................................................................................. 1462

The Challenges in Designing the World's Tallest Structure: The Burj Dubai Tower
William F. Baker, James J. Pawlikowski, Bradley S. Young
................................................................................................................................. 1471

INTEGRATED DESIGN OF TALL BUILDINGS: RECENT TRENDS AND PERSPECTIVES

Integrated Architectural Design
Raymond S. Clark
................................................................................................................................. 1481

Integrated Design: Everything Matters The Development of Burj Dubai and The New Beijing Poly Plaza
William F. Baker, Aaron Mazeika, James Pawlikowski
................................................................................................................................. 1485

CONCRETE AND MASONRY STRUCTURES

NEW DEVELOPMENTS FOR PRACTICAL ANALYSIS AND DESIGN OF STRUCTURAL CONCRETE FRAME CONNECTIONS

A Practical Model for Beam-Column Connection Behavior in Reinforced Concrete Frames
Anna Birely, Dawn Lehman, Laura Lowes
................................................................................................................................. 1495

Headed Reinforcement Applications for Reinforced Concrete Beam-Column Connections
Thomas H. K. Kang, Myoungsu Shin, Nilanjan Mitra
................................................................................................................................. 1505

Lateral Drift Limits for Structural Concrete Slab-Column Connections, Including Shear Reinforcement Effects
Mary Beth D. Hueste, Thomas H. K. Kang, Ian N. Robertson
................................................................................................................................. 1515

Performance and Design of Eccentric Reinforced Concrete Beam-Column Connections Subjected to Seismic Lateral Load Reversals
James M. LaFave, Myoungsu Shin
................................................................................................................................. 1525

EXPLORING ALLOWABLE STRESSES IN PRESTRESSED CONCRETE DESIGN? WHAT IS NECESSARY?

Allowable Tensile Stress Limit at Prestress Transfer
Robin Tuchscherer, Ozzie Bayrak
................................................................................................................................. 1534
Effects of Increasing the Allowable Compressive Stress at Prestress Transfer ....................................................... 1544
Brian Schnitker, David Birrcher, Oguzhan Bayrak

Fatigue Durability of Partially Post-Tensioned Concrete Members ................................................................. 1554
Jeffrey S. Volz, Andrea J. Schokker

ACI 318 – STRUCTURAL CONCRETE BUILDING CODE REORGANIZATION

ACI 318 Building Code -The Time is Right for Reorganization .............................................................................. 1564
Randall W. Poston

BUILDING CONSENSUS: Reorganization of the ACI 318 Building Code for Structural Concrete ...................... 1569
Charles W. Dolan, Lisa R. Feldman

Member Based Design Using a Reorganized ACI 318 Building Code ................................................................. 1574
Robert J. Frosch

SIZE EFFECTS, CONFLICTING DESIGN METHODS, AND OTHER PUZZLES IN SHEAR

Contribution of Concrete to Shear Resistance ....................................................................................................... 1579
Robert J. Frosch

Contribution of Stirrups to Shear Resistance ........................................................................................................... 1587
Daniel Kuchma

Depth Effect in Reinforced Concrete Deep Beams ................................................................................................. 1595
David Birrcher, Robin Tuchscherer, Matthew Huzinga, Oguzhan Bayrak

Shear Strength of Members without Transverse Reinforcement ............................................................................ 1604
Evan C. Bentz

RESEARCH ADVANCES 5/CODES & STANDARDS 1

EXPERIMENTAL RESEARCH RESULTS I

A Tracking Error-Based Adaptive Compensation Scheme for Real-Time Hybrid Simulation .......................... 1612
Cheng Chen, James M. Ricles

Characteristics of PVA Fiber-Reinforced Mortars ............................................................................................... 1622
Brian N. Skourup, Ece Erdogmus

Experimental Determination of the Seismic Response of Port Container Cranes Including Uplift Phenomena .............. 1632
Laura D. Jacobs, Reginald DesRoches, Roberto T. Leon

Experimental Investigation on Granite Masonry Behavior Under Compression .............................................. 1639
Fei Zeng, Feng-Bao Lin, Kolluru V. Subramaniam

Stability Behavior and Design of Steel Columns Under Fire Loading ............................................................ 1648
Anil Agarwal, Amit H. Varma, Lisa Choe, Guillermo Cedeno

EXPERIMENTAL RESEARCH RESULTS II

A Novel Cable-Enhanced, Wire-Mesh Reinforcement System for Structural Concrete to Improve its Blast-Resisting Properties ............................................................................................................................. 1658
Jameel Ahmad

Combined Shear and Wind Uplift Resistance of Wood Structural Panel Shearwalls ............................................ 1662
Borjen Yeh, Thomas Williamson, Edward Keith

Design of Hybrid Precast Concrete Walls for Seismic Regions ........................................................................ 1673
Brian J. Smith, Yahya C. Kurama

Proof of Concept Testing of Cable Bracing System with Rotating Central Energy Dissipater ............................. 1683
Masahiro Kurata, Roberto T. Leon, Reginald DesRoches
DISPROPORTIONATE COLLAPSE SYMPOSIUM

EXPERIMENTAL AND COMPUTATIONAL ASSESSMENT OF ROBUSTNESS OF FRAMED BUILDINGS

Development of 3D Models of Steel Moment-Frame Buildings for Assessment of Robustness and Progressive Collapse Vulnerability .......................................................... 1693
Joseph A. Main, Fahim Sadek

Development of Reduced Structural Models for Assessment of Progressive Collapse .................................. 1701
Yihai Bao, Sashi Kunnath, Sherif El-Tawil

Testing and Analysis of Steel Beam-Column Assemblies under Column Removal Scenarios ......................... 1708
Fahim Sadek, Joseph A. Main, H. S. Lew, Stephen D. Robert, Vincent Chiariito

DOD PROGRESSIVE COLLAPSE DESIGN REQUIREMENTS

Overview of the Revised DoD Progressive Collapse Design Requirements .......................................................... 1718
David Stevens, Owen Hewitt, Tim Campbell, Kirk Marchand

Revision of the Tie Force and Alternate Path Approaches in the DoD Progressive Collapse Design
Requirements .............................................................................................................................................. 1723
David Stevens, Kirk Marchand, Aldo McKay

Development and Application of Linear and Non-Linear Static Approaches in UFC 4-023-03 ...................... 1729
Kirk Marchland, Aldo McKay, David J. Stevens

Discussion of Examples using the Revised DoD Progressive Collapse Design Requirements ......................... 1739
Joseph Gannon, Viral Patel, Mark Wagggoner, Eric Williamson

PROGRESSIVE COLLAPSE, REDUNDANCY, AND ROBUSTNESS (INTERNATIONAL P-C SYMPOSIUM

A Measure of Lifetime Structural Robustness .................................................................................................. 1749
Fabio Biondini

Evaluating Measures of Structural Robustness ................................................................................................. 1758
Uwe Starossek, Marco Haberland

Performance as a Measure of Robustness ......................................................................................................... 1766
Mahendra Shah

Probabilistic Analysis of Bridge Redundancy ............................................................................................... 1771
Feng Miao, Michel Ghosn

Redundancy of Structural Systems based on Survivor Functions .................................................................. 1781
Dan M. Frangopol, Nader M. Okasha, Fazlur R. Khan

EUROPEAN RESEARCH INTO PROGRESSIVE COLLAPSE

Design-Oriented Approaches for Progressive Collapse Assessment: Load-Factor vs Ductility-Centred
Methods ......................................................................................................................................................... 1791
Bassam A. Izzuddin, David A. Nethercot

Experimental and Analytical Investigations on the Response of Structural Building Frames Further
to a Column Loss ......................................................................................................................................... 1801
Jean-Francois Demonceau, Jean-Pierre Jaspert

Progressive Collapse: Failure Criteria Used in Engineering Analysis .............................................................. 1811
Panagiotis M. Sylitanidis, David A. Nethercot, Bassam A. Izzuddin, Ahmed Y. Elghazouli

Response of End-Plate Joints under Combined Forces .................................................................................. 1821
Nadia Baldassino, Riccardo Zandonini

ASCE/SEI DESIGN GUIDELINES FOR MITIGATION OF DISPROPORTIONATE COLLAPSE IN
BUILDING STRUCTURES

Applicability of Prescribed Robustness and Design Approaches to Building Classes for
Disproportionate Collapse Resistance ........................................................................................................... 1831
Kirk Marchand, Robert Smilowitz
Approaches for Design to Resist Disproportionate Collapse ................................................................. 1841
  Robert Smilowitz, Mark Waggoner, Kirk Marchand
Levels of Prescribed Enhanced Robustness for Mitigation of Disproportionate Collapse ...................... 1846
  Kirk A. Marchand, David J. Stevens, Paul F. Mlakar
Risk Assessment to Support Design to Resist Disproportionate Collapse ............................................. 1856
  Stephanie A. King, David J. Stevens

RECENT RESEARCH ON PROGRESSIVE COLLAPSE

Abnormal Loads and Disproportionate Collapse: Risk Mitigation Strategies ............................................ 1860
  Bruce R. Ellingwood
Behavior of Varied Steel Frame Connection Types Subjected to Air Blast, Debris Impact, and/or
Post-Blast Progressive Collapse Load Conditions ..................................................................................... 1868
  Jesse E. Karns, David L. Houghton, Jong-Kook Hong, Joonghwan Kim
Evaluation of an Existing Steel Frame Building against Progressive Collapse .......................................... 1878
  Brian I. Song, Halil Sezen
Progressive Collapse Nomenclature .......................................................................................................... 1886
  Marco Haberland, Uwe Starossek

DISPROPORTIONATE COLLAPSE RESEARCH NEEDS

Disproportionate Collapse Research Needs .................................................................................................. 1896
  Bruce Ellingwood, Shalva Marjanishvili, Paul Mlakar, Mehrdad Sasani, Eric Williamson
Disproportionate Collapse: The Futility of Using Nonlinear Analysis .................................................... 1908
  Graham Powell

EXISTING BUILDINGS 2 / INTERNATIONAL

COMPUTING TECHNOLOGIES FOR STRUCTURAL IDENTIFICATION – WIRELESS
TECHNOLOGIES AND EARTHQUAKE ENGINEERING

A Time-Domain Covariance-Based Parameter Estimation Method for Torsional Shear Buildings .................. 1918
  Roshanak Omrani, Ralph E. Hudson, Ertugrul Taciroglu
Application of a Time-Domain Local Identification Methodology to Compact Analysis of Continuous
and Complete Structural Response Data ...................................................................................................... 1928
  Robert L. Nigbor, Reza D. Nayeri, Sami F. Masri, Roger G. Ghanem
Effects of the Structural Identification on the Appearance of Multiple Solutions in Model Updating .................. 1938

CASE STUDIES FOR THE ASSESSMENT AND RESTORATION OF EXISTING BUILDING
STRUCTURES

Assessment and Restoration of Post-Tensioned Buildings - Parking Ramp Structures .................................. 1954
  Gabriel A. Jimenez
Repair of Three-Story Residential Condominium in Lake Oswego, Oregon ........................................... 1964
  Clemens J. Rossell, Colin R. Murphy
Repair of Concrete Elements Using Externally Bonded Reinforcement: 30 Year History ............................. 1975
  Narendra Gosain, Walter P. Moore
Second Avenue Subway Project, New York - Reconstructing Existing Buildings for New Station
Entrances .................................................................................................................................................. 1983
  Richard Giffen, Karim Ezzeldin, Neil Towell
Structural and Environmental Stabilization of a Historic Wood-Framed Museum ................................... 1991
  Gary R. Seaver, James A. Mahaney
RESTORATION AND REPAIR OF EXISTING BUILDINGS

A Case Study on the Use of Advanced Fiberwrap Composites for the Structural Rehabilitation of Pre-Stressed Structural Elements ................................................................. 2000
  Tomas Jimenez, Scott F. Arnold

Elastic Buckling Finite Strip Analysis of the AISC Sections Database and Proposed Local Plate Buckling Coefficients .................................................................................................................. 2008
  Mina Seif, Benjamin Schafer

Repair of Pile Cap Foundations Using Strut-and-Tie Models ............................................................................... 2018
  John F. Duniemann, Ernest Rogalla, Jennifer A. Dimig, Brian R. Greve

RESEARCH ADVANCES 6 / NON BUILDING SPECIAL STRUCTURES 2

INFLUENCE OF COMPOSITE BEAMS AND FLOORS ON SYSTEM BEHAVIOR UNDER EXTREME LOADS

Behavior of Floor Systems Under Realistic Fire Loading ............................................................................................. 2026
  Guillermo Cedeno, Amit H. Varma, Anil Agarwal

Rotation and Strength Demands for Simple Connections to Support Large Vertical Deflections................................. 2036
  Jonathan Weigand, Jeffrey Berman

Modeling Structural Collapse Including Floor Slab Contributions .................................................................................. 2046
  Eric B. Williamson, David J. Stevens

BLAST PROTECTION AGAINST INDUSTRIAL EXPLOSIONS

A Case Study in Analyzing the Response of Structures to a Jet Fuel Vapor-Phase Explosion ........................................... 2055
  Lara Leininger, Shalva Marjanishvili

Comprehensive Component Based Screening Curve Library ............................................................................................. 2064

Blast Analysis and Retrofit of Structures in Industrial Facilities ...................................................................................... 2075
  Ali Sari, Mark Whitney, Walt Sawruk

WIND LOADS ON PETROCHEMICAL AND OTHER INDUSTRIAL STRUCTURES

Recent Research for Wind Loads on Petrochemical Structures ...................................................................................... 2088
  Samuel D. Amoroso, Marc L. Levitan

Wind Load Considerations for Existing Petrochemical Structures ................................................................................... 2098
  Richard T. Gilbert, James R. Bailey, Norman Rennalls, Gregory B. Young

WIND TURBINE AND FOUNDATION DESIGN

Dynamic Analysis of a Wind Turbine and Foundation to Assess Liquefaction Potential of Bearing Soils ................................................. 2107
  Bill Branca, Jomaa Ben-Hassine

Fatigue-driven Wind Farm Towers: A Practical Introduction to Fatigue Calculations ...................................................... 2119
  Nestor Agbayani, Vishal Kyatham

RESEARCH ADVANCES 7 / BRIDGE AND TRANSPORTATION STRUCTURES 3

MULTI-HAZARD APPROACHES TO ANALYSIS AND DESIGN

Blast Resistance of Unreinforced Masonry (URM) Walls Retrofitted With Nano Reinforced Elastomeric Materials .................................................................................................................. 2133
  Mohammad Irsidat, Ahmed Al-Ostaz, Alexander Cheng, Christopher Mullen

Design and Detailing Guidelines for Bridge Columns Subjected to Blast and other Extreme Loads .................................. 2143
  Carrie E. Davis, George D. Williams, Eric B. Williamson, Kirk A. Marchand, Aldo E. McKay, Oguzhan Bayrak
Subsystem Instability Conditions in Steel Frames Associated with Extreme Lateral Loading
Charlie Burchfield, Tezeswi Tadepalli, Christopher Mullen

STEEL BRIDGE ISSUES

Analysis of Critical Gusset Plates in the Collapsed I-35W Bridge
Minmao Liao, Taichiro Okazaki, Roberto Ballarini, Arturo E. Schultz, Theodore V. Galambos

VOLUME 4

Compliance Ratio Method for Calculating Energy Release Rates in Structural Steels
Akhrawat Lenwari

Fatigue Analysis of Peened Bridge Welds under Realistic Service Loading Conditions Including Periodic Overload Events
Scott Walbridge

Service Life Prediction for Weathering Steel Highway Structures
Neal Damgaard, Scott Walbridge

RESEARCH ADVANCES 8 / EDUCATION

A REMARKABLE NEW CONCRETE

Prefabricated Floor and Roof Panels with Engineered Cementitious Composites (ECC)
Gregor Fischer, Larus H. Larusson, Jeppe Jonsson

Damage Tolerant ECC for Integrity of Structures Under Extreme Loads
Victor C. Li

Engineered Cementitious Composites: An Innovative Concrete for Durable Structure
Mustafa Sahmaran, Victor C. Li

Sustainable Infrastructure Systems using Engineered Cementitious Composites
Michael D. Lepech

EDUCATION OF STRUCTURAL ENGINEERS

Changing the Home Building Paradigm of the Gulf South through Education
Robert J. Taylor, Dennis L. Pitts, Jeffrey B. Stone, Sam Nelson, Paul Bove, W. David Franklin

How to SEE Design in the Future
James Mwangi, Brent Nuttall, Kevin Dong

Wood Education Institute - The Entrepreneurial Spirit of Cooperation Between the Wood Industry and the University System
Mikhail Gershfeld, Charles B. Chadwell

BUSINESS AND PROFESSIONAL PRACTICE

STRUCTURAL ENGINEERING (S.E.) LICENSURE

Suggested Steps To Follow For The Enactment Of A Separate Structural Engineering Practice Act
John H. Shipp

The Business of Ethics
Michael N. Goodkind

Ethics and Technical Assessment after a Disaster: An Ongoing Case Study
