# TABLE OF CONTENTS

## WEA01  
### DYNAMIC OPTIMIZATION

- Model Predictive Control of Parabolic PDE Systems with Dirichlet Boundary Conditions Via Galerkin Model Reduction  
  Yongsheng Ou, Eugenio Schuster  
  ...................................................... 1
- Variable Structure Extremum Seeking Control Based on Sliding Mode Gradient Estimation for a Class of Nonlinear Systems  
  Lina Fu, Umit Ozguner  
  .............................................................................................................................................................................................. 8
- Algorithm for Very Fast Computation of Least Absolute Value Regression  
  Amin Nobakhti, Hong Wang, Tianyou Chai  
  .......................................................................................................................... 14
- Extremum Seeking Control for Efficient and Reliable Operation of Air-Side Economizers  
  Pengfei Li, Yaoyu Li, John E. Seem  
  ............................................................................................................................................................................................................. 20
- Optimal Spatial Field Control of Distributed Parameter Systems  
  Masako Kishida, Richard D. Braatz  
  ............................................................................................................................................................................................................. 26

## WEA02  
### CONTROL IN MODERN PRINTING SYSTEMS: MODULAR RECONFIGURABLE MEDIA PATHS, COLOR CONSISTENCY, FUSER PROCESS, AND REGISTRATION

- Control in Printing Systems: Modular Reconfigurable Media Paths  
  Haitham Hindi, Lara S. Crawford  
  .......................................................................................................................................................................................... 38
- Control of Non-linear and Non-holonomic Sheet Registration Devices  
  Martin Krucinski, Marina Tharayil  
  ............................................................................................................................................................................................................. 53

## WEA03  
### SLIDING MODE CONTROL

- A Sub-Optimal Second Order Sliding Mode Controller for Current-fed Induction Motors  
  Antonella Ferrara, Matteo Rubagotti  
  ............................................................................................................................................................................................................. 59
- Inducing Oscillations in an Inertia Wheel Pendulum Via Two-Relays Controller: Theory and Experiments  
  Luis T. Aguilar, Igor Boiko, Leonid M. Fridman, Leonid Freidovich  
  ............................................................................................................................................................................................................. 65
- Sliding Mode Control of Uncertain Multivariable Nonlinear Systems Applied to Uncalibrated Robotics Visual Servoing  
  Tiago Roes Oliveira, Alessandro Jacoud Peixoto, Antonio C. Leite, Liu Hua  
  ............................................................................................................................................................................................................. 71
- Causal Output Tracking in Nonminimum Phase Boost DC/DC Converter Using Sliding Mode Techniques  
  Simon Baev, Yuri B. Shishoel  
  ............................................................................................................................................................................................................. 77
- Sliding Mode Regulator as Solution to Optimal Control Problem for Nonlinear Polynomial Systems  
  Michael V. Basin, Dario Calderon-Alvarez  
  ............................................................................................................................................................................................................. 83
- Bilateral Teleoperation Using Unknown Input Observers for Force Estimation  
  John Michael Daly, David Wang  
  ............................................................................................................................................................................................................. 89

## WEA04  
### STABILITY OF NONLINEAR SYSTEMS

- Lyapunov Functions under LaSalle Conditions with an Application to Lotka-Volterra Systems  
  Frederic Mazenc, Michael Malisoff  
  ............................................................................................................................................................................................................. 96
- Flexible Control Lyapunov Functions  
  Mioce Lazar  
  ............................................................................................................................................................................................................. 102
- Refining LaSalle's Invariance Principle  
  Alessandro Arsie, Christian Ebenbauer  
  ............................................................................................................................................................................................................. 108
Less Conservative Absolute Stability Criteria Using Integral Quadratic Constraints ................................................................. 113
Donatello Materassi, Murti V. Salapaka

Sensitivity of Operator-Based Nonlinear Feedback Control Systems .................................................................................. 119
Changan Jiang, Mingcong Dong, Akira Inoue

On the Existence of Stable, Causal Multipliers for Systems with Slope-Restricted Nonlinearities ........................... 121
Matthew C. Turner, Ian Postlethwaite, Murray Lawrence Kerr

WEA05
CONTROL OF NETWORKED AND DISTRIBUTED PROCESS SYSTEMS

Centralized and Decentralized Policies for the Containment of Moving Source in 2D Diffusion Processes Using Sensor/actuator Network .............................................................................................................. 127
Michael A. Demetriou

A Two-Tier Control Architecture for Nonlinear Process Systems with Continuous/Asynchronous Feedback .................. 133
Panagiotis D. Christofides, Jinfeng Liu, David Muñoz de la Peña, Benjamin James Oliran, James F. Davis

Optimal Boundary Control of Kuramoto-Sivashinsky Equation ......................................................................................... 141
Stevan Dubljevic

A Safe-Parking Framework for Plant-Wide Fault-Tolerant Control ................................................................................ 148
Rahul Gandhi, Prashant Mhaskar

Resource-Aware Quasi-Decentralized Control of Nonlinear Plants Over Communication Networks .................. 154
Yulei Sun, Naif H. El-Farra

Model-Based Control of Multi-Unit Systems under Partial Shutdown Conditions ................................................................. 160
Zhizhen Chong, Christopher L. E. Swartz

WEA06
COMMAND SHAPING FOR VIBRATION SUPPRESSION

Performant Design of an Input Shaping Prefilter Via Embedded Optimization .............................................................. 166
Lieboud Van Den Broeck, Moritz Diehl, Jan Swevers

H∞ Closed-Loop Control for Unstable Uncertain Discrete Input-Shaped Systems .............................................................. 172
John Stergiopoulos, Anthony Tzes

Input Shapers for Reducing Overshoot in Human-Operated Flexible Systems ................................................................. 178
Joshua Vaughan, William Singhose

Reducing Vibration and Providing Robustness with Multi-Input Shapers ........................................................................ 184
Joshua Vaughan, William Singhose

Adaptive Inverse Control for Settling Performance Improvements ................................................................................ 190
Brian Rigney, Lucy Y. Pao, Dale A. Lawrence

Regulating Web Tension in Tape Systems with Time-Varying Radii ............................................................................ 198
Hua Zhong, Lucy Y. Pao

WEA07
FAULT DETECTION

Data-Driven Estimation of Multiple Fault Parameters in Permanent Magnet Synchronous Motors ........................................ 204
Subhadeep Chakraborty, Chinmay Rao, Eric Keller, Assok Ray, Murat Yasar

Ultrasonic Measurement of Crack Opening Load for Life-Extending Control of Mechanical Structures ........................................ 210
Dheeraj Singh, Abhishek Srivastav, Shalabh Gupta, Eric Keller, Assok Ray

Estimation of Multiple Faults in Aircraft Gas-Turbine Engines ............................................................................................. 216
Soumik Sarkar, Chinmay Rao, Assok Ray

Fault-Tolerant Controller Synthesis for Piecewise-Affine Systems ...................................................................................... 222
Nastaran Nayebpanah, Luis Rodriguez, Youmin Zhang

Transformations of Markov Processes in Fault Tolerant Interconnected Systems ............................................................. 227
Jorge R. Chávez-Fuentes, Oscar R. González, W. Steven Gray

</table>
An Analysis and Synthesis of Internal Model Principle Type Controllers .......................................................... 488
Yigang Wang, Kevin Chu, Tsu-Chin Tsao

WEA16
ESTIMATION I

State and Parameter Estimation Using Bayesian Belief Networks .............................................................................. 494
Ameneh Sahraneshin, Nasir Mehranbod, Reza Eslamlouian, Masoud Sorosh

Gradient-Based Iterative Solutions for General Matrix Equations ........................................................................... 500
Li Xie, Jie Ding, Feng Ding, Huizhong Yang

Central Suboptimal H∞ Filter Design for Nonlinear Polynomial Systems ................................................................. 506
Michael V. Basin, Peng Shi, Dario Calderon-Alvarez

Decentralized Centroid Estimation for Multi-Agent Systems in Absence of Any Common Reference Frame ............ 512
Andrea Gasparri, Mauro Franceschelli

Multiple Model Adaptive Estimation and Model Identification using a Minimum Energy Criterion ....................... 518
Vahid Hassani, A. Pedro Aguiar, Michael Athans, Antonio M. Pascoal

Minimum Sum of Distances Estimator: Robustness and Stability ................................................................. 524
Yoav Sharon, John Wright, Yi Ma

WEA17
ACTUATOR SATURATION CONTROL

Output Tracking Control for Continuous-Time Networked Control Systems with Communication Constraints .......... 531
Yu-Long Wang, Guang-Hong Yang

Robust Control of Ship Fin Stabilizers Subject to Disturbances and Constraints ......................................................... 537
Reza Ghaemi, Jing Sun, Ilya V. Kolmanovsky

Stabilizing Control for an Inverted Pendulum with Restricted Travel ....................................................................... 543
Kazunobu Yoshida, Itaru Matsumoto

Constrained Controller Design for a Class of Nonlinear Discrete-Time Uncertain Systems ..................................... 549
Dipak Adharyu, Indra Narayan Kar, M. Gopal

Beam-And-Ball System under Limited Control: Stabilization with Large Basin of Attraction ..................................... 555
Yannick Aoustin, Alexander Formalsky

GPS-INS State Estimation for Multi-Robot Systems with Computational Resource Constraints ............................. 561
Luke Wachter, Laura Ray

WEA18
ADAPTIVE CONTROL

Adaptive Robust Control: A Piecewise Lyapunov Function Approach ...................................................................... 568
Jianming Lian, Jianghai Hu, Stanislaw H. Zak

Continuous Model Reference Adaptive Control with Sliding Mode for a Class of Nonlinear Plants with Unknown State Delay ............................................................................................................ 574
Boris Mirkin, Per-Olof Gutman, Yuri B. Shevdxel

Adaptive Asymptotic Tracking Control of a Class of Discrete-Time Nonlinear Systems with Parametric and Nonparametric Uncertainties .................................................................................. 580
Chenguang Yang, Shi-Lu Dai, Shuzhi Sam Ge, Tong Heng Lee

Adaptive Control of a Class of Strict-Feedback Discrete-Time Nonlinear Systems with Unknown Control Gains and Preceded by Hysteresis ........................................................................ 586
Shuzhi Sam Ge, Chenguang Yang, Shi-Lu Dai, Tong Heng Lee

Multivariable MRAC with State Feedback for Output Tracking ........................................................................ 592
Jiazxng Guo, Yu Liu, Gang Tao

Structural Performance Improvement Using MR Dampers with Adaptive Control Method ........................................ 598
Maryam Bitaraf, Luciana Barroso

WEA19
COOPERATIVE CONTROL I

Dynamic Multi-Vehicle Routing with Multiple Classes of Demands ........................................................................ 604
Marco Pavone, Stephen L. Smith, Francesco Bullo, Emilio Frazzoli
Formation Shape and Orientation Control Using Projected Collinear Tensegrity Structures
Darren Pais, Ming Cao, Naomi Ehrich Leonard

On Controlled Sinusoidal Phase Coupling
Daniel J. Klein, Emmett Lalish, Kristi A. Morgansen

Stabilization of Collective Motion in a Time-Invariant Flow Field on a Rotating Sphere
Sonia Hernandez, Derek A. Paley

Characterizing Convergence Speed for Consensus Seeking Over Dynamically Switching Directed Random Networks
Jing Zhou, Qian Wang

Cooperative Target-Capturing Strategy for Multi-Vehicle Systems with Dynamic Network Topology
Hiroti Kawakami, Toru Namikawa

WEA20
CONTROL AND OPTIMIZATION OF ENERGY SYSTEMS

Optimal Design and Observation of Counter-Current Autothermal Reactors for the Production of Hydrogen
Michael Baldea, Monica Zanfir, Prodromos Daoutidis

Vapor Recompression Distillation: Multi-Scale Dynamics and Control
Sujit S. Jogwar, Prodromos Daoutidis

Networked Control of Distributed Energy Resources: Application to Solid Oxide Fuel Cells
Yulesun, Sathyendra Ghantasala, Nael H. El-Farra

Nonlinear Multivariable Predictive Control of an Autothermal Reforming Reactor for Fuel Cell Applications
Yongyou Hu, Donald J. Chmielewski

Optimal Operation of a Waste Incineration Plant
Jeffrey C. Kantor, Patrick Mousaw

Models for the Optimization and Risk Management of Energy Conversion Networks

WEB01
VEHICLE CHASSIS CONTROL

Global and Local Chassis Control Based on Load Sensing
Mathieu Gerard, Michel Verhaegen

Controlling Active Cabin Suspensions in Commercial Vehicles
Willem-Jan Evers, Igo Besselink, Albert Van Der Knaap, Arjan Teerhuis, Hendrik Nijmeijer

Vehicle Yaw Inertia and Mass Independent Adaptive Control for Stability and Trajectory Tracking
Enhancements
Junmin Wang, Ming Feng Hsieh

Vehicle Handling Assistant Control System Via Independent Rear Axle Torque Biasing
Hai Yu, Wei Liang, Ming L. Kuang, Ryan McGee

Vehicle Stabilization in Response to Exogenous Impulsive Disturbances to the Body
Jing Zhou, Jianbo Lu, Huei Peng

Terrain-Based Road Vehicle Localization on Multi-Lane Highways
Adam Dean, Sean Brennan

WEB02
MARKOV MODELS AND DECISION PROCESSES

The Analysis of Discrete Transient Events in Markov Games
Brian D. Ewald, Jeffrey Humpherys, Jeremy West

Lyapunov Stability for Quantum Markov Processes
Ram Abhinav Somaraju, Ian R. Petersen

Regularized Fitted Q-Iteration for Planning in Continuous-Space Markovian Decision Problems
Amir Massoud Farahmand, Ghavamzadeh Mohammad, Csaba Szepesvári, Shie Mannor

An Information-Theoretic Framework to Aggregate a Markov Chain
Kun Deng, Yu Sun, Prashant G. Mehta, Sean Meyn

Hidden Markov Models for Non-Well-Mixed Reaction Networks
Nils Napp, David Thorsley, Eric Klavins
## Approximate Dynamic Programming Using Bellman Residual Elimination and Gaussian Process Regression

Brett Bethke, Jonathan P. How

MODELING AND CONTROL OF COMPLEX SPATIALLY DISTRIBUTED PROCESSES

Feedback Control of Dissipative PDE Systems in the Presence of Uncertainty and Noise Using Extended Kalman Filter .......................................................................................................................... Sivasakaran Pitchaiah, Antonios Armaou
Optimal Control of a Time-Varying Catalytic Fixed-Bed Reactor with Catalyst Deactivation .......................................................... Leily Mohammadi Sardroud, Ilyasse Aksikas, J. Fraser Forbes
Model Predictive Control of Nonlinear Stochastic PDEs: Application to a Sputtering Process .......................................................... Yiming Lou, Gangshi Hu, Panagiotis D. Christofides
Predictor-Like Feedback for Actuator and Sensor Dynamics Governed by Diffusion PDEs .......................................................... Miroslav Krstic
Networked Control of Spatially Distributed Processes with Sensor-Controller Communication Constraints ................................ Yulei Sun, Sathyendra Ghantasala, Nael H. El-Farra
Multiscale Modeling of Atomic Layer Deposition Processes ................................................................. 2495
Raymond Adomaitis, Vivek Dwivedi

THA16
MODELING AND CONTROL OF HYPERSONIC VEHICLES. PART I: MODELLING

Control-Oriented Aerothermoelastic Modeling Approaches for Hypersonic Vehicles ................................................................. 2501
Adam J. Culler, Jack McNamara, Andrew Crowell

An Overview on Dynamics and Controls Modelling of Hypersonic Vehicles ................................................................. 2507
Michael Bolender

Control-Oriented Analysis of Thermal Gradients for a Hypersonic Vehicle ................................................................. 2513
Sanketh Bhat, Richard C. Lind

Control-Relevant Modeling of Hypersonic Vehicles .......................................................................................... 2519
Jerald M. Vogel, Atul Kelkar, George Inger, Christopher E. Whitmer, Alan Sidlinger, Armando A. Rodriguez

Flight Dynamic Characteristics of a Scramjet-Powered Generic Hypersonic Vehicle ................................................................. 2525
Maj Dean Mirmirani, Matthew Kuipers, Jason Levin, Andrew Clark

Robust Nonlinear Control of a Hypersonic Aircraft in the Presence of Aerothermoelastic Effects ................................................................. 2533

THA17
CONSTRAINED CONTROL III

Decentralized Control of Discrete-Time Linear Time Invariant Systems with Input Saturation ................................................................. 2539
Ciprian Deliu, Babak Malek, Sandip Roy, Ali Saberi, Anton A. Stoorvogel

Recovery of Linear Performance in Feedback Systems with Nonlinear Instrumentation ................................................................. 2545
Shinung Ching, Pierre T. Kabamba, Semyon M. Meerkov

Load Transfer Control for a Crane with State Constraints .......................................................................................... 2551
Kazunobu Yoshida, Itaru Matsumoto

Adaptive Steady-State Target Optimization Using Iterative Modified Gradient-Based Methods in Linear Non-
Square MPC .................................................................................................................................................. 2558
Leo Roger Edward Shead, Kenneth R. Muske, J. Anthony Rossiter

Analysis and Design of Output Feedback Control Systems in the Presence of Actuator Saturation ................................................................. 2564
Wei Guan, Guang-Hong Yang

Adaptive Fault-Tolerant Output-Feedback Control of LTI Systems Subject to Actuator Saturation ................................................................. 2569
Wei Guan, Guang-Hong Yang

THA18
ADAPTIVE SYSTEMS

Adaptive Tracking Controller for Systems with Unknown Long Delay and Unknown Parameters in the Plant ................................................................. 2575
Delphine Bresch-Pietri, Miroslav Krstic

Robust Adaptive Optimal Control Modification with Large Adaptive Gain .......................................................................................... 2581
Nhan Nguyen, Abraham K. Ishihara

Adaptive Nonlinear Control Allocation of Non-Minimum Phase Uncertain Systems ................................................................. 2587
Fang Liao, Kai-Yew Lam, Jian Liang Wang, Mouhcine Benosman

An LMI-Based Stability Analysis for Adaptive Controllers .......................................................................................... 2593
Bong-Jun Yang, Tuncel Yucelen, Anthony J. Calise, Jong-Yeob Shin

Adaptive Disturbance Accommodating Controller for Uncertain Stochastic Systems ................................................................. 2599
Jemin George, Puneet Singla, John L. Crassidis

Globally Stable Adaptive Formation Control of Euler-Lagrange Agents Via Potential Functions ................................................................. 2606
Ademir Rodrigues Pereira, Liu Hsu, Romeo Ortega

THA19
COOPERATIVE CONTROL III

Cooperative Defensive Surveillance Using Unmanned Aerial Vehicles ................................................................. 2612
Amir Matlock, Raymond Holsapple, Corey Schumacher, John Henry Hansen, Anouck Girard

Analysis of Actuator Faults in a Cooperative Team Consensus of Unmanned Systems ................................................................. 2618
Elham Semsar Kazerooni, Khashayar Khorasani
A Hybrid Control Approach to Cooperative Target Tracking with Multiple Mobile Robots ................................................................. 2624
Ying Lan, Gangfeng Yan, Zhiyun Lin

Experimental Validation of Cooperative Environmental Boundary Tracking with On-Board Sensors ................................................................. 2630
Abhishek Joshi, Trevor Ashley, Yuan (Rick) Huang, Andrea L. Bertozzi

A Transformation for a Multiple Depot, Multiple Traveling Salesman Problem ................................................................. 2636
Paul Oberlin, Sivakumar Rathinam, Sowrapoor Darbha

Voronoi-based Coverage Optimization for Mobile Networks with Limited Sensing Range — A Directional Search Approach ................................................................. 2642
John Stergiopoulos, Anthony Tzes

THA20
DYNAMICS AND CONTROL OF FUEL CELL SYSTEMS

Dynamics and Control of Membrane Hydration in a PEMFC* ................................................................................................................................. 2648
Syed Ahmed, Donald J. Chmielewski

Load Characteristics and Control of a Hybrid Fuel Cell / Battery Vehicle ................................................................................................................................. 2654
Syed Ahmed, Donald J. Chmielewski

Dynamic Behavior and Control of a Tubular Solid-Oxide Fuel Cell System ................................................................................................................................. 2660
S. Ahmad Hajimolana, Masoud Soroush

Through the Membrane & Along the Channel Flooding in PEMFCs ................................................................................................................................. 2666
Jason Siegel, Anna G. Stefanopoulou

Dynamic Modeling and System Identification of a Tubular Solid Oxide Fuel Cell (TSOFC) ................................................................................................................................. 2672
Debangsu Bhattacharyya, Raghunathan Rengaswamy

Experimental Evaluation of Linear Model Based Control Strategies for PEMFCs ................................................................................................................................. 2678
Ravi Methkar, Sachin Patwardhan, Raghunathan Rengaswamy, Ravindra Gade, Vinay Prasad

THB01
AUTOMOTIVE ENGINE CONTROL II

An Iterative Algorithm for Model-Based Predictive Control of an Electro-Pneumatic Valve Actuator ................................................................. 2684
Guoming Zhu, Jia Ma, Harold Schock

Rotational Angle Based Pressure Control of a Common Rail Fuel Injection System for Internal Combustion Engines ................................................................................................................................. 2690
Zhen Zhang, Zongxuan Sun

Modeling and Control Design of a Camless Valve Actuation System ................................................................................................................................. 2696
Pradeep Kumar Gillella, Zongxuan Sun

Throttle Actuator Swapping Modularity Design for Idle Speed Control ................................................................................................................................. 2702
Shijiang Li, Meilih Cakmakci, Ilya V. Kolmanovsky, A. Galip Ulsoy

Low-Complexity Model Predictive Control of Electromagnetic Actuators with a Stability Guarantee ................................................................................................................................. 2708
R. M. Hermans, Mircea Lazar, Stefano Di Cairano, Ilya V. Kolmanovsky

Practical Observers for Unmeasured States in Turbocharged Gasoline Engines ................................................................................................................................. 2714
Julia Buckland, James S. Freudenberg, Jessy W. Grizzle, Mrdjan Jankovic

THB02
BRIDGING THE GAP BETWEEN ACADEMIA AND INDUSTRY

Bridging the Gap between Universities and Industry ................................................................................................................................. 2720
Terrence Blevins, Gregory McMillan

Bridging the Gap Between Academia and Industry - Washington University’s Process Control Laboratories ................................................................................................................................. 2730
Yinjie Tang, Robert Heider

Rose-Hulman Institute of Technology Unit Operations Laboratory ................................................................................................................................. 2735
Atanas Serbezov, Ronald Artigue, Ron Knecht

Engineering Research Center for Structured Organic Particulate Synthesis (ERC-SOPS) ................................................................................................................................. 2741
Rex Reklaitis, Venkat Venkatasubramanian, Arun Giridhar
Using a Distributed Control System (DCS) for Distillation Column Control in an Undergraduate Unit Operations Laboratory ......................................................................................................................... 2744
Ivan Castillo, Thomas F. Edgar

THB03
POWER SYSTEMS II

Turbine Speed Control for an Ocean Wave Energy Conversion System ................................................................................................................................. 2749
Paula B. Garcia-Rosa, Jose Paulo V. S. Cunha, Fernando Lizarralde

CPS Compliant Fuzzy Neural Network Load Frequency Control ................................................................................................................................. 2755
Xiangjie Liu, Jianwu Zhang

An Onboard Electrical Network Platform - Modeling & Simulation ................................................................................................................................. 2761
Gang Yao, Guy Lebret, Mourad Ait-Ahmed, Pedro Neiva Kriekza, Tianhao Tang

A Feedback Based Load Shaping Strategy for Fuel Utilization Control in SOFC Systems ......................................................................................................... 2767
Tuhin Das, Ryan Weisman

Load Frequency Control for Multiple-Area Power Systems ................................................................................................................................. 2773
Yao Zhang, Lili Dong, Zhiquang Gao

Nonlinear Multivariable Supervisory Predictive Control for Combined Cycle Power Plant Using Associate Memory Network ................................................................................................................................. 2779
Xiangjie Liu, Lixia Niu, Jizhen Liu

THB06
INFORMATION FUSION AND NETWORKS

Fast Sensor Scheduling for Spatially Distributed Heterogeneous Sensors ................................................................................................................................. 2785
Shogo Arai, Yasushi Iwatani, Koichi Hashimoto

Detection Using Intermittent Observations for Passive Wireless Sensors ................................................................................................................................. 2791
Ashraf Tantawy, Xenofon Koutsoukos, Gautam Biswas

A Distributed MPC Scheme with Low Communication Requirements ................................................................................................................................. 2797
J. M. Maestre, David Muñoz de la Peña, Eduardo F. Camacho

Robust Stabilization of Networked Control Systems with Nonlinear Uncertainties ................................................................................................................................. 2803
Junyan Yu, Long Wang, Mei Yu, Yingmin Jia

Uncertainty Reduction on Temperature Differential Measurements Using the Calibration by Comparison Method ................................................................................................................................. 2809
Jose Alejandro Ospina, Enrico S. Canuto

Coordinated Guidance of Autonomous UAVs Via Nominal Belief-State Optimization ................................................................................................................................. 2811
Scott A. Miller, Zachary Harris, Edwin K. P. Chong

THB07
APPLICATIONS II

Nonlinear Robust Stochastic Control for Unmanned Aerial Vehicles ................................................................................................................................. 2819
Yunjun Xu

Lower Bounds on the Rate of Learning in Social Networks ................................................................................................................................. 2825
Ilan Lobel, Daron Acemoglu, Munther A. Dahleh, Asuman Ozdaglar

Option Pricing for Inventory Management and Control ................................................................................................................................. 2831
Bryant Angelos, McKay Heasley, Jeffrey Humpherys

Laser Beam Pointing and Stabilization by Intensity Feedback Control ................................................................................................................................. 2837
Nestor Osvaldo Perez Arancibia, James Steven Gibson, Tsu-Chia Tsao

Steady-State and N-Stages Control for Isolated Controlled Intersections ................................................................................................................................. 2843
Jack Haddad, Bart De Schutter, David Mahalel, Per-Olof Gutman

Digital Design of Coefficient Diagram Method ................................................................................................................................................................. 2849
Omur Ocal, Atilla Bir, Bernd Tibken

THB08
CONTROL APPLICATIONS FOR ROBOTIC SYSTEMS

Pose Control of Robot Manipulators Using Different Orientation Representations: A Comparative Review ................................................................................................................................. 2855
Ricardo Campa, Hussein De La Torre
Coordinated Control of Multiple Mobile Robots in Pursuit-Evasion Games .................................................. 2861
Feifei Huang, Long Wang, Qinmin Wang, Ming Wu, Yingmin Jia

A New Operational Space Trajectory Tracking Controller for Manipulators by Using Only Position Measurements .......................................................... 2867
Javier Moreno-Valenzuela, Ernesto Oviedo-Montejano

Motion Control of an Aerial Work Platform .......................................................... 2873
Qinghui Yuan, Jae Lew, Damrongrit Pipatpongkarn

Grasping Control of 3-Joint Dual Finger Robot: Lyapunov Stability Approach ........................................ 2879
Seung Kwan Song, Jin Bae Park, Yoon Ho Choi

A Nested PID Steering Control for Lane Keeping in Vision Based Autonomous Vehicles .................................. 2885
Riccardo Marino, Stefano Scialzi, Giuseppe Orlando, Mariama Netto

THB09
LARGE SCALE SYSTEMS

Distributed Feedback Control for an Eulerian Model of the National Airspace System ........................................ 2891
Jerome Le Ny, Hamza Balakrishnan

A Scalable Robust Stability Criteria for Systems with Heterogeneous LTI Components ..................................... 2898
Ulf T. Jonsson, Chung-Yao Kao

A New Sufficient Condition for Additive D-Stability and Application to Cyclic Reaction-Diffusion Models ........ 2904
Xiaoqing Ge, Murat Arcak

Distributed Fault-tolerant Control Systems Design Against Actuator Faults and Faulty Interconnection Links: an Adaptive Method .................................................. 2910
Xiao-Zheng Jin, Guang-Hong Yang

Freeway Traffic Flow Simulation Using the Link Node Cell Transmission Model ........................................... 2916
Ajith Muraleedharan, Gunes Dervisoglu, Roberto Horowitz

Supervised Self-Organization of Large Homogeneous Swarms Using Ergodic Projections of Markov Chains .......... 2922
Ishans Chattopadhyay, Asok Ray

THB10
NEURAL NETWORKS

Neuro-Fuzzy Network Control for a Mobile Robot ......................................................................................... 2928
Jun Oh Jang, Hee Tae Chung

Neural Network Control of a Class of Nonlinear Discrete Time Systems with Asymptotic Stability Guarantees .......... 2934
Balaje Thumati, Sarangapani Jagannathan

Trajectory Tracking based on Differential Neural Networks for a Class of Nonlinear Systems ...................... 2940
J. Humberto Perez-Cruz, Alexander S. Poznyak

A Novel Adaptive NN Control for a Class of Strict-Feedback Nonlinear Systems ........................................ 2946
Tieshan Li, Dan Wang, Wei Li

Adaptive Control with Composite Learning for Tubular Linear Motors with Micro-Metric Tolerances ............. 2952
David Naso, Francesco Cupertino, Biagio Turchiano

On Quantized Consensus by Means of Gossip Algorithm - Part II: Convergence Time ................................. 2958
Javad Lavasani, Richard M. Murray

THB11
MULTIVEHICLE CONTROL

H2 Analysis and Synthesis of Networked Dynamic Systems ........................................................................... 2966
Daniel Zelazo, Mehran Mesbahi

Further Results on the Stability of Distance-Based Multi-Robot Formations ................................................. 2972
Dimos V. Dimarogonas, Karl H. Johansson

Multiple UAV Path Planning Using Anytime Algorithms .............................................................................. 2978
Sujit P B, Randy Beard

Stochastic Analysis and Stabilization of Remote Control Systems ................................................................. 2984
Long Sheng, Ya-Jun Pan

Neural Network Control of Quadrotor UAV Formations .............................................................................. 2990
Travis Dierks, Sarangapani Jagannathan
Stability of Potential Function Formation Control with Communication and Processing Delay ....................................................... 2997
Luke Wachter, Laura Ray

THB12
SWITCHED SYSTEMS IV

Switched System Based Approach to Analysis and Synthesis of Discrete-Time Linear Systems with Time-Varying State Delay .......................................................... 3033
Xin Du, Guang-Hong Yang

THB13
PATH FOLLOWING FOR NONLINEAR SYSTEMS: THEORY AND APPLICATIONS

Path Following Using Transverse Feedback Linearization: Application to a Maglev Positioning System .................................................. 3045
Christopher Nielsen, Cameron Fuford, Manfredi Maggiore

THB14
ROBUST CONTROL II

Recursive Robust Regulator for Discrete-Time State-Space Systems .......................................................................................... 3077
João Paulo Cerri, Marco Henrique Terra, João Yoshuyuki Ishihara

THB15
LPV CONTROL SYSTEMS I

LPV Decoupling for Multivariable Control System Design .................................................................................................. 3112
Javad Mohammadpour Velni, Karolos M. Grigoriadis, Matthew A. Franchek, Yue-Yun Wang
Stabilizing Model Predictive Control for LPV Systems Subject to Constraints with Parameter-Dependent Control
Law..........................................................................................................................................................3118
Shuyou Yu, Christoph Bohm, Hong Chen, Frank Allgower

Experimental Results on LPV Stabilization of a Riderless Bicycle .................................................................3124
David Andreo, Vito Cerone, Daeyoung Chung, Diego Reginato

Implementation of FIR Control for H-Infinity Output Feedback Stabilization of Linear Systems ..................3130
Kwan Ho Lee, Igor Boiko, Biao Huang

Tip-Over Stability Analysis of Mobile Boom Cranes with Double-Pendulum Payloads ..................................3136
William Singshore, Daichi Fujioka, Andreas Rauch, Taft Jones

On the Transient Control of Linear Time Invariant Systems ............................................................................3142
Waqar Malik, Svaroop Darbha, Shankar P. Bhattacharyya

THB16
MODELLING AND CONTROL OF HYPERSONIC VEHICLES, PART II: GUIDANCE AND CONTROL

Analysis of an Adaptive Mixing Control Scheme for an Airbreathing Hypersonic Vehicle Model ..................3148
Matthew Kuijpers, Petros A. Ioannou, Baris Fidan, Maj Dean Mirmiran

Constraint Enforcement Control Methods for Scramjet-Powered Hypersonic Vehicles with Significant Aero-
Elastic-Propulsion Interactions ..........................................................................................................................3154
Don Soloway, Armando A. Rodriguez, Jeffrey Dickeson, Oguzhan Cifdaloz, Jose V. Benavides, Atul Kelkar, Jerald M. Vogel,
Srikant Sridharan

Nonlinear Control of Non-Minimum Phase Hypersonic Vehicle Models ..........................................................3160
Lisa Fiorentini, Andrea Serrani, Michael Bolender, David B. Doman

L1 Adaptive Control of a Hypersonic Vehicle with Flexible Body Dynamics ....................................................3166
Yu Lei, Chengyu Cao, Eugene M. Cliff, Naira Hovakimyan, Andrew J. Kurdila, Kevin A. Wise

Integrated Adaptive Guidance and Control of Constrained Nonlinear Air-Breathing Hypersonic Vehicle Models ........................................................................................................................................3172
Andrea Serrani, Alicia Zinnecker, Lisa Fiorentini, Michael Bolender, David B. Doman

Adaptive Control of Hypersonic Vehicles in the Presence of Modeling Uncertainties ........................................3178
Travis Gibson, Luis G Crespo, Amuradha Annaswamy

THB17
FILTERING

On the Residual Based Stochastic Gradient Algorithm for Dual-Rate Sampled-Data Systems Using the Polynomial
Transform Technique ........................................................................................................................................3184
Xiaoming Chen, Yowo Liao, Feng Ding, Dongqing Wang

Non-Fragile H∞ Filter Design with Pole Placement Constraints for Delta Operator Formulated Systems Via LMI
Optimization .......................................................................................................................................................3188
Xiang-Gui Guo, Guang-Hong Yang

A Finite Frequency Approach to Reliable H1 Filtering for Linear Continuous-Time Systems with Sensor Faults ........................................................................................................................................3194
Heng Wang, Guang-Hong Yang, He-Hua Ju, Li-Guo Zhang

Are Anti-Aliasing Filters Really Necessary for Sampled-Data Control? ..............................................................3200
Mariam Blachuta, Rafał Grygiel

A Convex Optimization Approach to Filtering in Jump Systems with State Dependent Transition Probabilities ........................................................................................................................................3206
Agostino Capponi, Concetta Pilotto

A Direct Quadrature Approach for Nonlinear Filtering .....................................................................................3212
Yunjun Xu, Jangho Yoon

THB18
ADAPTIVE CONTROL APPLICATIONS I

Adaptive Control in the Presence of Quantization and Saturation: Application to Laser Beam Steering by a Liquid
Crystal Device ..................................................................................................................................................3218
Paweł Konrad Orzechowski, James Steven Gibson, Tsu-Chin Tsao, Dan Herrick, Victor Maxwell Rouzel, Milind Mahajan, Bing
Wen, Bruce Winker

An Adaptive Observer Design for Recirculation Based Solid Oxide Fuel Cell Systems Using Cell Voltage
Measurement ...................................................................................................................................................3224
Tuhin Das

Improved Convergence of MRAC Design for Printing System ...........................................................................3232
Mohammed Ezzeldin Mahdy, P. P. J. Van Den Bosch, Rene Waarsing
An Adaptive Control Technology for Safety of a GTM-Like Aircraft Model
Megumi Matsutani, Travis Gibson, Jinho Jang, Luis G Crespo, Anuradha Annaswamy

Adaptive Disturbance Rejection in the Presence of Uncertain Resonance Mode in Hard Disk Drives
Fan Hong, Chunling Du, Keng Peng Tee, Shuzhi Sam Ge

L1 Adaptive Control for Autonomous Rotorcraft
Bruno J. N. Guerreiro, Carlos Silvestre, Rita Cunha, Chengyu Cao, Naira Hovakimyan

THB19
COOPERATIVE CONTROL IV

Leader-Follower Consensus of Multi-Agent Systems
Zhongkui Li, Zhisheng Duan, Lin Huang

Stability and Robustness of Systems with Synchronization Errors
Marek Przedwojski, Krzysztof Galkowski, Peter H. Bauer, Eric Rogers

Dynamic Optimal Control of Multiple Depot Vehicle Routing Problem with Metric Temporal Logic
Marian Faiad, Ahmed Mostafa, Anouck Girard

Cooperative Phototaxis Using Networked Mobile Sensors and Centroidal Voronoi Tessellations
Shelley Rounds, Yangquan Chen

Coalition Formation in Multi-Agent Systems Based on Bottlenose Dolphin Alliances
Musad Haque, Magnus Egerstedt

Information Broadcasting Algorithm for Finite-Time Reaching-At-Risk Consensus with Application to Weapon-Target Assignment
Nicolas Lechevin, Camille Alain Rabbath, Youmin Zhang

THB20
CONTROL OF NETWORKS I

Krasovskii's Method in the Stability of Network Control
Diego Feijer, Fernando Paganini

Distributed Network Utility Maximization Using Event-Triggered Augmented Lagrangian Methods
Pu Wan, Michael Lemmon

Nash Q-Learning Multi-Agent Flow Control for High-Speed Networks
Yuanwei Jing, Xin Li, Georgi M Dimirovski, Yan Zheng, Si-Ying Zhang

Phase Transition in Complex Networks
Dan Wang, Na Cui, Yuanwei Jing, Si-Ying Zhang

Sliding Mode Congestion Control for DiffServ Networks
Nannan Zhang, Yuanwei Jing, Yucheng Zhou, Si-Ying Zhang

Moving Targets Tracking and Observing in a Distributed Mobile Sensor Network
Hung Lu, Weihua Sheng

THC01
AUTOMOTIVE TRACTION CONTROL

Accounting for Tire Effect in Vehicle Longitudinal Control
Fouad Giri, Khalid El Mjadoub, Hamid Ouadi

Vehicle Pure Yaw Moment Generation by Using Tire Differential Slip Control
Wei Liang, Hai Yu, Ryan McGee, Ming L. Kuang, Juraj V. Medanic

Virtual Sensors, Application to Vehicle-Tire Road Normal Forces for Road Safety
Moustapha Doumiati, Alessandro Victorino, Ali Charara, Daniel Lechner

Second Order Sliding Mode for Traction Control in Ride-By-Wire Sport Motorcycles
Claudio Vecchio, Mara Tanelli, Matteo Corno, Antonella Ferrara, Sergio M. Savarese

An LMI Approach to Slip Ratio Control of Vehicle Antilock Braking Systems
Yan-E Mao, Yan Zheng, Yuanwei Jing, Georgi M Dimirovski, Siying Zhang
Vibration Reduction Using a Two-Step Braking Profile .............................................................. 3355
Omar Al Assad, Carlos Martinez Ferreira, Vincent Croulard, Emmanuel Godoy

THC02
BUSINESS AND BANDWIDTH: A TUTORIAL ON HOW BUSINESS AND USE MODELS AFFECT INDUSTRIAL CONTROL DESIGN

A Tale of Three Actuators: How Mechanics, Business Models and Position Sensing Affect Different Mechatronic Servo Problems ................................................................. 3357
Daniel Y. Abramovitch

H-Infinity Filtering of Networked Systems with Time-Varying Sampling Rates ........................................ 3372
Renato A. Borges, Ricardo C. L. F. Oliveira, Chaouki T. Abdallah, Pedro L. D. Peres

THC03
MEASUREMENT AND CONTROL IN NETWORKED SYSTEMS

Redundant Data Transmission in Control/Estimation Over Wireless Networks ........................................ 3378
Alexandre Mesquita, Joao P. Hespanha, Girish N. Nair

Analysis of Distributed Control Systems with Shared Communication and Computation Resources ............................................................. 3384
Peyman Naghishi-Bazizi, Joao P. Hespanha

Quasi-Decentralized Control of Process Systems Using Wireless Sensor Networks with Scheduled Sensor Transmissions .............................................................. 3390
Nael H. El-Farra, Yulei Sun

Compressive Cooperative Sensing and Mapping in Mobile Networks .............................................................. 3397
Yasamin Mostofi, Pradeep Sen

Optimal Kalman Filtering with Random Sensor Delays, Packet Dropouts and Missing Measurements .............................................................. 3405
Maryam Moayedi, Yeng Chai Soh, Yung Kuan Foo

THC06
FAULT DETECTION AND ACCOMODATION I

Robust Fault Reconstruction Using Multiple Sliding Mode Observers in Cascade: Development and Design .............................................................. 3411
Chee Pin Tan, Christopher Edwards

Dynamic Kernel Scatter-Difference-Based Discriminant Analysis for Diagnosis of Tennessee Eastman Process .............................................................. 3417
Sumana C, Venkateswarlu Ch., Ravindra Gudi, Mani Bhushan

Fast Time-Frequency Domain Reflectometry Based on the AR Coefficient Estimation of a Chirp Signal .............................................................. 3423
Seung Ho Doo, Won-Sang Ba, Tae-Sang Yoon, Jin Bae Park

Application of Combined Support Vector Machines in Process Fault Diagnosis .............................................................. 3429
Esmail Tafazzoli, Mohdad Saif

Improved Monitoring and Discrimination of Batch Processes Using Correspondence Analysis .............................................................. 3434
Shaleesh Pateel, Ravindra Gudi

Effective Fault Detection & Isolation Using Bond Graph-Based Domain Decomposition .............................................................. 3440
Xi Zhang, Karlene Hao

THC07
APPLICATIONS OF NONLINEAR CONTROL

Global Swing Instability in the New England Power Grid Model .............................................................. 3446
Yoshihiko Suzuki, Igor Mezic, Takashi Hikihara

Lyapunov Stability of an Open-Loop Induction Machine .............................................................. 3452
Ahmed Oteafy, John Chiasson

Dynamic Feedback Linearization Applied to Asymptotic Tracking: Generalization about the Turbocharged Diesel Engine Outputs Choice .............................................................. 3458
Marcelin Dabo, Nicolas Langlois, Houcine Chafouk

Experimental Studies on Improving Safety in Haptic and Teleoperation Systems .............................................................. 3464
Julian Ware, Yongqiang Ye, Yo-Jun Pan, Yash P. Gupta

Nonlinear Control of Associations Including Synchronous Motors and AC/DC/AC Converters: a Formal Analysis of Speed Regulation and Power Factor Correction .............................................................. 3470
Abdelmoumine El Magri, Fouad Giri, Abdelmajid Abouloifa, Ibtissam Lachkar, F. Z. Chaoui
A Nonlinear Feedback Tracking Control for Pneumatic Cylinders and Experiment Study ............................................................. 3476
  Yong Yin, Jihong Wang

THC08
MECHATRONICS

Design and Relay-Based Control of a Novel Linear Magnetostrictive Motor .................................................................................. 3482
  Won-Jong Kim, Ali Sadighi

A New Experimental Test Bench for a High Performance Double Electropneumatic Actuator System .................................................. 3488
  Alexis Girin, Franck Plestan

Impulsive Control of a Mechanical Oscillator with Friction .............................................................................................................. 3494
  Yury Orlov, Raul Santiesteban Cos, Luis T. Aguilar

Backstepping Controller Synthesis for Piecewise Polynomial Systems: A Sum of Squares Approach ................................................. 3500
  Behzad Samadi, Luis Rodrigues

Adaptive Control of a Robotic System Undergoing a Non-Contact to Contact Transition with a Viscoelastic Environment ................................................................. 3506
  Shubhendu Bhasin, Keith Dupree, Zachary Wilcox, Warren E. Dixon

THC09
DECENTRALIZED CONTROL I

The Design of Multi-Lead-Compensators for Stabilization and Pole Placement in Double-Integrator Networks Under Saturation ........................................................................ 3512
  Yan Wan, Sandip Roy, Ali Saberi, Anton A. Stoorvogel

Stable Control of Distributed Hysteretic Systems Using Cellular Broadcast Stochastic Feedback .............................................................. 3519
  Levi Benjamin Wood, H. Harry Asada

Decentralized Suboptimal Control via Limited Capacity Channels .................................................................................................... 3525
  Alireza Farhadi, Nasiruddin Ahmed

Reconfigurable Decentralized Receding Horizon Control for Cooperative Multiple Vehicles Subject to Communication Failure ........................................................................... 3531
  Hojjat A. Izadi, Brandon, W. Gordon, Youmin Zhang

Decentralised Static Output Feedback Stabilisation of Networks with H2 Performance .................................................................... 3537
  Prathyush P Menon, Christopher Edwards

WLS-based Partially Decentralized Adaptive Control for Coupled ARMAX Multi-agent Dynamical System .................................................. 3543
  Hongbin Ma, Shuzhi Sam Ge, Kai-Yew Lum

THC10
FUZZY SYSTEMS I

Assessment of Linguistic Dynamic Cause-And-Effect Rules with Delays ......................................................................................... 3549
  R. Russell Rhinehart, Ming Su

Genetic Based Fuzzy Logic Controller for a Wall-Following Mobile Robot .......................................................................................... 3555
  Sameh F. Desouky, Howard M. Schwartz

A New Neural Network-Based Approach for Self-Tuning Control of Nonlinear Multi-Input Multi-Output Dynamic Systems ........................................................................... 3561
  Jose Canelon, Leang-San Shieh, Yongpeng Zhang, Cajetan Matsuabuchi Aksuobi

Identification of a Class of Nonlinear Systems by a Continuous-Time Recurrent Neurofuzzy Network .................................................. 3567
  Marcos A. Gonzalez-Olvera, Yu Tang

On the Smoothness in Local Model Networks ................................................................................................................................. 3573
  Benjamin Hartmann, Oliver Nelles

THC11
MARINE VEHICLES

A Hierarchical Path Planning and Obstacle Avoidance System for an Autonomous Underwater Vehicle ........................................... 3579
  Farshad Khorrami, Prashanth Krishnamurthy

Robust Feedback Tracking of Autonomous Underwater Vehicles with Disturbance Rejection .......................................................... 3585
  Amit Sanyal, Monique Chyba
Signal Threshold Estimation in a Sensor Field for Undersea Target Tracking
Kushal Mukherjee, Arok Ray, Thomas Wettergren, Ishana Chattopadhyay, Shashi Phoha

State-Dependent Trajectory Planning and Tracking Control of Unmanned Surface Vessels
Reza A. Soltan, Hashem Ashrafiuon, Kenneth R. Muske

Viability-Based Computation of Spatially Constrained Minimum Time Trajectories for an Autonomous Underwater Vehicle: Implementation and Experiments
Andrew Tinka, S. Diemer, Luã-s Madureira, Eduardo Marques, Joao Sousa, Ricardo Martins, Jose Pinto, Jorge Estrela Silva, Patrick Saint-Pierre, Alexandre M. Bayen

Path Following for Marine Surface Vessels with Rudder and Roll Constraints: An MPC Approach
Zhen Li, Jing Sun, So-Ryeok Oh

THC12
HYBRID SYSTEMS I

Hybrid LQ-Optimization Using Dynamic Programming
Vadim Azhmyakov, Rosalba Galvan Guerra, Magnus Egerstedt

Formal and Practical Completion of Lagrangian Hybrid Systems
Yizhar Or, Aaron Ames

Analysis and Control of Hybrid Systems with Parameter Uncertainty Based on Interval Methods
Koichi Kobayashi, Kanikiko Hiraizuka

A Separation Principle for a Class of Hybrid Automata on a Partial Order
Domitilla Del Vecchio, Michael Malisoff, Rajeev Verma

Modeling Multi-Agent Systems with Hybrid Interacting Dynamics
Jorge Piovesan, Chaouki T. Abdallah, Herbert Tanner

Unifying Behavior-Based Control Design and Hybrid Stability Theory
Vladimir Djapic, Jay A. Farrell, W. Dong

THC13
HVAC AND MECHATRONIC SYSTEMS

Stability Analysis of Heat Exchanger Dynamics
Tiejun Zhang, John T. Wen, Juan Catano, Rongliang Zhou

A Full Dynamic Model of a HVAC Vapor Compression Cycle Interacting with a Dynamic Environment
Bin Li, Andrew G. Alleyne

A Model-Based Predictive Supervisory Controller for Multi-Evaporator HVAC Systems
Matthew Elliott, Bryan Rasmussen

Printer Media Path Closed Loop Control
Martin Krucinski

Two-Degree-Of-Freedom Control of a Dual-Stage Actuator Positioning System for Short-Span Tracking
Jinchuan Zheng, Weizhou Su, Minyue Fu

Real-Time Measurement of Eccentric Motion with Capacitive Sensor for Hydraulic Pumps

Toward a Flexible Control Design Framework to Automatically Generate Control Code for Mechatronic Systems .......................4933
Ö. Aydin Tekin, R. Babuska, Tetsuo Tomiyama, Bart De Schutter

Experimental Verification of Saturation Reducing, Zero Vibration Command Shapers .................................................................4939
Michael Robertson

Exponential Stability and Static Output Feedback Stabilization of Singular Time-Delay Systems with Saturating Actuators ........................................................................................................................................................................4945
Ahmad Haidar, El-Kebir Boukas, Shengyuan Xu, James Lam

Sliding Mode Optimal Regulator for a Bolza-Meyer Criterion with Non-Quadratic State Energy Terms ........................................4951
Michael V. Basin, Dario Calderon-Alvarez, Antonella Ferrara, Francesco Dinuzzo

FRB11
FAULT DETECTION AND ACCOMODATION III

Distributed Triangulation in the Presence Faulty and Byzantine Beacons in Aircraft Networks with ADS-B Technology ........................................................................................................................................................................4956
Daniel Uhlig, Negar Kiyavash, Natasha A. Neogi

Fault Detection for Aircraft Control Surfaces Using Approximate Input Reconstruction .................................................................4962
Haoyun Fu, Jin Yan, Mario Santillo, Harish Palanichadalam-Madapusi, Dennis S. Bernstein

Detecting Intrusion Faults in Remotely Controlled Systems ...............................................................................................................................4968
Salvatore Candido, Seth Hutchinson

Multi-Decision Decentralized Prognosis of Failures in Discrete Event Systems .......................................................................................4974
Ahmed Khounsni, Hicham Chakib

A Neural-Fuzzy Sliding Mode Observer for Robust Fault Diagnosis ........................................................................................................4982
Qing Wu, Mehrdad Saif

A Model Based Fault Detection and Accommodation Scheme for Nonlinear Discrete-Time Systems with Asymptotic Stability Guarantee ........................................................................................................................................................................4988
Balaje Thumati, Sarangapani Jagannathan

Petri Nets and Programming: A Survey ........................................................................................................................................................................4994
Mariam Iordache, Panos J. Antsaklis

Minimum Initial Marking Estimation in Labeled Petri Nets .................................................................................................................................5000
Lingxi Li, Christoforos Hadjicostis

Efficient Deadlock Prevention in Petri Nets through the Generation of Selected Siphons .................................................................5006
Luigi Piroddi, Roberto Cordone, Ivanno Fumagalli

FRB12
PETRI NETS: THEORY AND APPLICATIONS

Petri Nets Control Design for Hybrid Electrical Energy Systems ................................................................................................................5012
Dimitri Lefebvre, François Guerin, Badara Mboup, Pape Ndiaye

Efficient State-Based Analysis by Introducing Bags in Petri Nets Color Domains ................................................................................5018
Serge Haddad, Fabrice Kordon, Laure Petrucci, Jean-François Pradat-Peyre, Nicolas Treses

Basic Qualitative Properties of Petri Nets with Multi-Guarded Transitions .......................................................................................5026
Jorge Julvez

FRB13
SYSTEM IDENTIFICATION

Parameter Estimation Algorithms for Missing-Data Systems .......................................................................................................................5032
Feng Ding, Jie Ding

Amadou Ba, Slim Bousieh, Mechbal Nazih, Michel Vergé

Off-Road Vehicle Sprung Mass Identification from Suspension Measurements ........................................................................................................5043
Benjamin Fonce, Hosam K. Fathy, Jeffrey L. Stein

Mobile Sensor Networks for Learning Anisotropic Gaussian Processes ........................................................................................................5049
Yuanfei Xu, Jongeun Choi
Robust Parameter Identification with Adaptive Sparse Grid-Based Optimization for Nonlinear Systems Biology
Maia Donahue, Gregory Buzzard, Ann E. Rundell

Parameter Estimation with Missing Input/Output Data
Yang Shi, Huazhen Fang, Jian Wu

FRB14
STOCHASTIC SYSTEMS II

System Reliability Estimation and Confidence Regions from Subsystem and Full System Tests
James C. Spall

Duty Ratio Control of a Rotary PWM Valve with Periodic Measurement Error
Meng Wang, Perry Y. Li

A Control Allocation Approach for Energetic Swarm Control
Reza Pedrami, Sivaram Wijenddra, Jamie Baxter, Brandon, W. Gordon

FRB17
TOPICS IN CONTROL II

New H∞ Controller Design Method for Networked Control Systems with Quantized State Feedback
Xun-Lin Zhu, Guang-Hong Yang

Output Tracking Control for Discrete-Time Networked Control Systems
Yu-Long Wang, Guang-Hong Yang

Control of a Rope-Driven Self-Leveling Device for Leveling Adjustment
Yi Yu, Jianqiang Yi, Chengdong Li, Dongbin Zhao, Jianhong Zhang

Discrete-Time Non-Fragile Dynamic Output Feedback H-Infinity Controller Design
Guang-Hong Yang, Wei-Wei Che

FRB18
ADAPTIVE CONTROL OF NONLINEAR SYSTEMS II

L1 Adaptive Output Feedback Controller for Non Strictly Positive Real Multi-Input Multi-Output Systems in the Presence of Unknown Nonlinearities
Chengyu Cao, Naira Hovakimyan

Lyapunov Redesign of Adaptive Controllers for Polynomial Nonlinear Systems
Qian Zheng, Fen Wu

Nonlinearly Parameterized Adaptive PID Control for Parallel and Series Realizations
Khalid El Rifai

Asymptotically Stable Adaptive Critic Design for Uncertain Nonlinear Systems
Jianguo Tao, Xue Liu, Xiaoping Zhu

Stable Multiple Model Adaptive Control of Nonlinear Multivariable Discrete-Time Systems
Yue Fu, Tianyou Chai, Hong Wang
