</table>
Hydrotreating Reaction Performance In Small Catalyzed Channels ............................................................. 36
Wei Liu

Process Simulation of a Pilot Case: Production of Perfume-Containing Microcapsules ........................................... 37
Laureano Jiménez-Esteller, Rodolfo V. Tona Vásquez

Gas-Liquid Mass Transfer in a Rotating Horizontal Cylinder ........................................................................ 40
Gangadhara Raja Muthinti, Roshan J. J. Jachuck, Srinivasan Ambatipati

High Pressure Microfluidics for Nanomaterials Synthesis ........................................................................ 41
Samuel Marre, Jongnam Park, Moungi G. Bawendi, Klavs F. Jensen

Single-Phase Rimming Flow In a Rotating Horizontal Cylinder ................................................................. 43
Saravanan Suppiah Singaram, Roshan J. J. Jachuck

Dilute Acid Hydrolysis of Cellulosic Wastes Using Field Effects ................................................................. 44
Hariprasad Amanapu, Prof. Roshan J. J. Jachuck

Kamlesh Bhatia: A Career In Innovation ........................................................................................................ 45
Surita R. Bhatia, Sujata K. Bhatia

Yoga Meditation and Black Belt Action In Process Research and Development ........................................ 46
George Liebermann

A Novel Method for Enhanced Heat Removal from Closed Systems ............................................................... 47
Ranga Narayanan, Jonathan M. Volk

Design and Process Control Issues In Nanomanufacturing ...................................................................... 48
Babatunde A. Ogunnaike

Development of Current and Next-Generation Biomedical Materials ......................................................... 49
Sujata K. Bhatia

Process Development - the Role of Engineering Evaluations ................................................................. 50
Bruce M. Vrana, Robert A. Cantini

The Yoga of Process Development .............................................................................................................. 51
Kamlesh Bhatia

Conceptual Design of Biobutanol Production Processes ............................................................................. 52
Arjan Oudshoorn, Adrie J. J. Straathof, Luuk A. M. van der Wielen

Flare Minimization for ChEmical Process Industry Sustainability ............................................................. 53
Qiang Xu, Kuyen Li, Chao-Wei Liu, Xiongtao Yang

Process and Economic Simulation of Wastewater Plants for Lipid Feedstock Production through Use of Superpro Designer .............................................................................................................. 54
Stephen Dufreche, William French, Rafael Hernandez

Solar-Thermal Processing for Sustainable Production of ChEmicals and Fuels .............................................. 55
Christopher Perkins, Paul Lichty, Alan W. Weimer

Photocatalytic Concrete Slab for Passive NOx Pollution Control .............................................................. 56
Daniel H. Chen, M. Pullia, A. Vaddi, R. Asapu, K. Li, R. Yuan

Sub-Molten Salt Environmentally Benign Technology ................................................................................... 65
Yi Zhang, Zuohu Li, Hongbin Xu, Shili Zheng, Tao Qi, Huiquan Li

Comparative Study of Transesterification of Refined Oil Using a Batch Reactor Versus a High Shear Mixer Pilot Scale Reactor .............................................................................................................. 74
Sipho C. Ndlela

Economic and Environmental Impact Assessment of Alpha-Naphthol Production by Traditional and Biocatalytic Routes .................................................................................................................. 77
Irvin Osborne-Lee, Ghenga Ajiboye, Jerrad Deason
Non-Phosgene Low Temperature Route for Manufacture of Isocyanates ................................................... 85
Nitin V. Tople, Eric J. Beckman

Towards High Purity Separations by a Novel - Sustainable Technology, Fricdiff ........................................ 86
Aylin Selvi, André Bardow, Peter J. Jansens

Green Product Design of Temperature Sensors ............................................................................................. 88
Maria Nydia Ruiz Felix, Robert P. Hesketh

An Optimal Plant Lay-out Approach Considering Process Safety Issues .................................................... 89
Seungho Jung, M. Sam Mannan, Richart Vazquez

Automated Targeting for Property Integration with Interception Placement ............................................ 90
Yin Ling Tan, Choon Hock Pau, Denny K. S. Ng, Dominic Chwan Yee Foo, Raymond Tan

Introduction to ChEmometrics -- Design of Experiments and Principal Component Analysis .......................................................... 103
Dongsheng Bu, Andrew Chu

Data Exploration Analysis In Process Development: Application to API Characterization ...................... 104
Jose E. Tabora, Jessica Defreese, Prashant Deshpande, Jean Tom

Scale-up a Complex Pharmaceutical Batch Process Using Mid-IR: The Role of Simple Peak Height Profiling, Partial Least Squares (PLS) Modeling and Dynamic Principal Component Analysis (PCA) .......................................................... 105
Shan Lin, James Marek, Samrat Mukherjee

Application of ChEmometrics in Process Monitoring of Synthesizing Preferred Isomer .......................... 106
Dongsheng Bu, Andrew Chu

Utilization of Single Crystal X-Ray Studies of Process Relevant Pharmaceutical Crystal Forms to Support Qbd .......................................................................................................................... 107
John D. DiMarco, Michael A. Galella, Raymond P. Scaringe, Carolyn J. Pommier, Jack Z. Gougoutas

Selecting a Capstone Product Design Project ............................................................................................... 108
Michael Hill, Sanat K. Kumar, Lynn H. Lander

Product Design Using Reverse Engineering ................................................................................................. 109
Maria Nydia Ruiz Felix, Robert P. Hesketh

Experiences with Typical Product Design Projects ...................................................................................... 110
Warren D. Seider, John C. Crocker, Talid Sinno, Scott L. Diamond

Design of Pharmaceutical Products: Experiences at Rose-Hulman .......................................................... 111
David C. Miller

Product Design with the Aid of Finite Element Programs in Capstone Design Projects ........................ 112
Aydin Sunol

Product Driven Process Design Methodology ............................................................................................. 115
Peter M.M. Bongers, Cristhian P. Almeida-Rivera

Applying Engineering to Baking -- a Fish Tale ............................................................................................ 116
Gary Israel

Product and Process Optimization in Polyester Dyeing ............................................................................... 144
Yue-Hin Leung, Ka M. Ng

Structured Excipient Design Using Property Clustering and Decomposition Techniques ........................ 145
Charles C. Solvason, Nishanth Chemmangattuvelappil, Mario R. Eden

Development of a Skin-Care Cream Containing Zinc Oxide Nanoparticles and An Herbal Extract ........ 146
Yuen S. ChEng, Ka W. Lam, Ka M. Ng, Robert K. M. Ko, Christiano Wibowo
Stabilizing Copper Hydroxide .......................................................................................................................... 147
Matthew R. Oberholzer

Computation of Melting Points, Crystalline Free Energies, and Transport Properties of Molten Salts .......................................................................................................................... 148
Saivenkataraman Jayaraman, Edward J. Maginn

Molecular Design of Self-Assembling Copolymer and Surfactant Systems .............................................. 149
Shekhar Jain, Adam S. Bymaster, Chris Emborsky, Kenneth R. Cox, Walter G. Chapman

A Novel Approach to Process and Product Design Using Molecular Signature ........................................ 150
Nishanth Chemmangattuvalappil, Charles C. Solvason, Mario R. Eden

Computer Aided Polymer Design Using Multiscale Modeling ....................................................................... 151
Kavitha Chelakara Satyanarayana, Jens Abildskov, Rafiqul Gani, Georgia Tsolou, Vlasis Mavrantzas

Structured Product Design Using Combined Property Clustering and Decomposition Techniques .......................................................... 178
Charles C. Solvason, Nishanth Chemmangattuvalappil, Mario R. Eden

Apurva Samudra, Nick Sahinidis

Lattice Monte Carlo Modeling and Analysis of Microstructure and Coating Quality Correlation for Optimal Paint Design ........................................................................................................... 180
Jie Xiao, Yinlun Huang
