TABLE OF CONTENTS

VOLUME 1

3D Packaging

The Evolution to 3D IC Integration ............................................................................................................ 1
Philip Guvrou

Supply Chain Activities for 3D TSV Integration ....................................................................................... 37
Rozalia Beica

New 3D Interconnection Method by Using Wet Etching Technology ...................................................... 77
Takanori Maebashi, Natsuo Nakamura, Yutaka Sacho, Shigeto Nahayama, Eiri Hashimoto, Shinjiro Toyoda,
Nobuki Miyakawa

High Insulating Through Silicon Via Integration in 200V SOI Applications ........................................ 105
Cyrille Laviron, Brendan Dunne, David Henry, Astrid Astier, Pietro Erratico, Paola Galbiati, Valérie Lapras,
Antonella Milani, Thomas Magis, Antonio Roman, Fabrizio Tola

Simultaneous Copper Electroplating of TSV and RDL Formations on 3D Wafer Structures using a
Highly Conformal Copper Plating Process ................................................................................................. 136
Robert S. Forman, Stephen Christian, Yu Luo, Andrew Zhang, Frank Scaraglino

Delivering Cost Effective Wafer Level and 3D Packages with TSV .................................................... 180
Moshe Kriman, Bents Kidron, Giles Humpston

3D TSV Interconnects: A Market Analysis .................................................................................................. 220
Eric Mounier

Cost Effective Approach to 3D Integration with iTSV™ .......................................................................... 225
Paul Siblerud

Development of Second Generation 3D Devices ...................................................................................... 264
Robert Patti

3D Integration Technologies For Miniaturized Tire Pressure Monitor System (TPMS) ......................... 296
Nicolas Lietaer, Maaike M. V. Taklo, Armin Klumpp, P. Ramm

3D Packaging for Image Sensor Application ......................................................................................... 323
H. Reichl

Development of High Die Count Spacerless Film-based NAND Stacked Chip Scale Packages ............ 336
Gunaranjan Viswanathan, J.H. Yoon, Robert Aubuchon, Harry Wu, Ying Long Song, J.B. Yu, Roger St. Amand

Critical Factors of TSV Copper Electrodeposition .................................................................................. 356
Rozalia Beica

Evaluation of Seed Layer Coverage in High Aspect Ratio Trenches and Through Silicon Vias (TSV)
Using 300-mm Advanced Directional Sputtering (ADS) ...................................................................... 396
Patrick Carazzetti, Clemens Frick, Christian Linder

Characterization of Integrated Material Solutions for 3D/TSV ............................................................... 424
Toshiaki Iitahashi, Anthony Rardin

Lithography and Wafer Bonding Solutions for 3D integration .................................................................. 456
T. Matthias, Bioh Kim, M. Wimplinger, Paul Lindner

Photolithography in Vertical Vias for 3D TSV ......................................................................................... 463
D. Figura, J. Bartel, C. Thanner, M. Wimplinger, D. Warren

High Accuracy Placement and In-Situ Reflow or Thermo-Compression Bonding Enabling High
Density and Fine Pitch in 3D-IC with Chip to Wafer Bonding Approach .............................................. 469
Gilbert Lecarpentier, Jean Stephane Mottet, Francois Marion

Improved Control of Through-Silicon Via Profiles for Advanced Packaging Applications ................ 499
Michelle Bourke, Leslie Lea, Huma Ashraf, Janet Hopkins, Stephane Héraud

Thermal Test Vehicle Integration of 3-D VLSI ...................................................................................... 531
Y. Liu, L. Schaper, S. Burkett

Thermal Management and Performance Optimization of 3-D Microelectronics System ....................... 568
Victor Chiriac

Exposing Dies for Failure Analysis in Stacked Die Packages by Micro-Abrasive Blasting .................... 594
Stefan Martens, Horst Theuss, Walter Mack, Friedemann Voelklein, Juergen Wilde
Electrical Characterization of High Count, 10 um Pitch, Room-Temperature Vertical Interconnections

Francois Marion, Damien Saint Patrice, Manuel Fendler, Frederic Berger, Hervé Ribot, Gilbert Lecarpentier, Joseph Macheda

Can Current EDA Packaging Tools meet the demands of Ever-Changing 3D Packaging Technology?

John Sovinsky

VOLUME 2

Achieving Higher Efficiency in Complex IC Package/SiP Design through 3D DRM Integration with Manufacturing Systems

Chris Morrison, Brad Griffin

Magnetic Self-Assembly of Chip-Scale Components

Sheetal Shetye, Ilan Eskinazi, David P. Arnold

Structural Design Aspects for Reliability of High-Density Chip-Scale Packages Using a Wafer-Stack Process

Piyush Savalia, Ilyas Mohammed, Laura Mirkarimi

Chip Embedding Technology – New Technological Challenges for a Reliable System-in-package Realization

Lars Bottcher, D. Manessis, S. Karaszkiewicz, A. Ostmann, H. Reichl

Next Generation Package-on-Package (PoP) Platform with Through Mold Via (TMV) Interconnection Technology

Curtis Zwenger, Lee Smith

VIPOP - A Low Cost HVM POP ALternative

Marc Robinson

Applications of Silicon Interposers

Jean-Marc Yannou

MEMS

Laser Structured Printed Circuit Boards - Applications and Characteristics

Roland Schoenholz, Wurth Elektronik, Mathias Nowottnick, Andrej Novikov

Fluidic Systems in Printed Circuit Board Technology

Lienhard Pagel, Stefan Gassmann

Pressure Sensor in Printed Circuit Board Technology

Martin Hammerle, Lienhard Pagel

Improvements of a PCB Technology for Micro Fluidic Devices

Stefan Gassmann, Lienhard Pagel

Polymer MEMS/PCBMEMS and Packaging for Multi Parameter BioTag Systems in the Environment

David P. Fries, Stanislav Z. Ivanov, Heather Broadbent, Steven Andrasik

A MEMS-based Gas Sensor for Automobile Applications

J.H. Yoon, Jung-Sik Kim

Piezoelectric Acoustic Emission Sensor Array for Impact Characterization

M. Kranz, M. Whitley, T. Hudson

Development of Biprobe Integrated with Microneedle for Cellular Function Analysis

N. Kato, T. Shibata, T. Kawashima, T. Mineta, E. Makino

Development of Vertical Integration of MEMS Inertial Sensors and Devices

Philip Reiner, Robert Elliott

Fabrication and Control of an Electrostatically Levitated Rotating Gyro

Charles D. Ellis, Bogdan M. Wlazlowski

Tunable Millimeter-Wave Device Based on Waveguide-Packaged MEMS

Jan Hesselbarth, Rüdiger Vahldieck

MEMS Bonding with Polymers

Kathy Cook, Sharon Farrens, Sumant Sood
Selective Heating and Cooling for Processing of Advanced PCB Assemblies
Mathias Nowottnick, Andrej Novikov, Ashraf A.S. Mohammad, Trinh Dung Bui, Kiran Babu Matta

Unique Application of CO₂ Cyrogenic Aerosol Cleaning for Particle Removal in MEMS and
Packaging Fabrication Processes
P. Cheng, C. Bowers, A. Campbell, J. Rodriguez, I. Varghese, M. Balooch, W. Brandt

VOLUME 3

Controlled Latching of Microplates for Assembling 3D MEMS
N.S. Shaar, G. Barbastathis, C. Livermore

Evaluating the Properties of Materials in Unique and Harsh Environments through Microsystems-Based Testing
David B. Serrell, Nicholas Barbosa III

3-D Micro Electromagnetic Radio Frequency Systems (3D-MERFS)
Daniel Fontaine, Jean-Marc Rollin, Chris Nichols, David Sherrerr, Virginia Dejan Filipovic, Yuya Saito

RF MEMS Hybrid Package Testing
Daniel Hyman

Near Hermetic Wafer Level Packaging Using LCP Adhesive Layer
Cody Moody, Brandon Pillans, Andrew Malczewski, Francis J Morris

Fabrication and Testing of a Flat Polymer Micro Heat Pipe

Development of Nanostructured Wick-Based Passive Heat Spreader for Thermal Management of
Radio Frequency Electronic Devices
David Altman, Justin Weibel, Suresh Garimella, Jayathi Murthy, Timothy Fisher, Sungwon Kim, Yousef Habib, Jason Nadler, Tianhong Cui, Ram Ranjan

An Advanced Wafer-Level Packaging Method for Electrostatic Actuated Out-of-Plane MEMS Devices
Kuan-Lin Chen, Shasha Wang, Thomas W. Kenny

MEMS Accelerometer Autoclave Failure Mechanisms and Design Improvement
David Lin, Gopi Boinepally, Mukund Muralidhar

Polymer-based Wafer Bonding Technology for Mems Applications
V. Dragoi, E. Pabo, T. Matthias, E. Calmak, E. Capsuto, C. McEwen

A System for the Early Evaluation of Newly Developed MEMS Devices
Seong Jin Kim, Rebecca Ibrahim, Meagan Black, Mike Palmer, Robert Dean, George Flowers

Vacuum Packaging of MEMS Devices and the Effects of Outgassing and Getter Activation
Jay Mitchell, Warren Welch, Khalil Najafi, Sang Woo Lee

SEM/EDS Based Trace Element Sensitivity (TSA) Analysis for Reducing Defects in MEMS and
MOEMS (micro-opto-electromechanical Systems) Assembly
Lee Levine, Rachel Zane, Samuel Lawrence, Claudio Tarquinio

Flip Chip

Managing the Underfill Process in Transient Thermal Environments
Steve Adamson, Dan Ashley, William Hassler, Jared Wilburn

Process Control and Impact of Underfill Fillet Design on Flip Chip Package Reliability
Brett Wiltkerson, Mike Fuller, Kar Wei Shim

Novel Packaging Via Solder Joints at Chip Edges
Cui Liang, Wayne Buckham, Andrew Carter, Patrick Fay, Mohammad Khan, David Kopp, Jason Kulick, Yenchun Lee, Michael Padberg, Ryan Savino, Gregory Snider, Gary H. Bernstein

Latest Developments in Bumping Technologies for Flip Chip and WLCSP Packaging
D. Manessis, Lars Böttcher, A. Ostmann, H. Reichl

Analysis of BGA Solder Joint Reliability for Selected Solder Alloy and Surface Finish Configurations
Hugh Roberts, Sven Lamprecht, Christian Sebold, Mark Bachman, John Osenbach, Kishor Desai, Ron Huemoeller, Yoon Ha Jung, Robert Darveaux
The Impact of Advanced Materials on FCBGA Package Reliability and Thermal Performance
Sasanka Kanuparthi, Nokibul Islam

Chip Joining of High End Flip Chip Organic Packages - Interconnect Pitch Reduction Challenges
David Danovitch, Pascal Blais, Valerie Oberson

Assessment of Impact of Alpha Emissivity of Packaging Materials on the Soft Error Rate of Flip Chip Devices
Rick Wong, Shi-Jie Wen, Peng Su, Li Li

Coreless Substrate Assembly and Reliability
Jon Aday, Nokibul Islam, Steven Lee

VOLUME 4

Ultra Fine Pitch Bumping Using e-Ni-Au and Sn Lift-Off Processes
Andrew Strandjord, Thorsten Teutsch, Jing Li, Thomas Oppert, Elke Zakel

LEDs

An In-Depth Look at Active Cooling Thermal Management: Synthetic Jet Technology
Raghav Mahalingam, Brandon Noska

Low Cost Copper Tungsten Heat Sinks Made by Near Net Shape Infiltration
Ken Kuang, Bill Ishii, Danny Zhu, Guosheng Jiang

Classifying and Understanding TIMs for Power LED Applications
David Saums

Thermal resistance Measurements on Chip on Board LED Packaging
Adrien Gasse

Addressing Thermal Issues During LED Packaging and Assembly using Dispense Processes
Horatio Quinones, Robert Hoffman, Steve Adamson

Bonding a LED Substrate to a Heat Spreader: More than a Matter of Low Thermal Resistance
Kees Slob, Abdelhakim El Hasnaoui, Marc de Samber, Hans de Vries, Jeff Kmetec, Frank Wall, Li Zhang

Thermal Management Through Die Attach Material for High Power LEDs
Bohan Yan, Jian Pyng You, Nguyen T. Tran, Yongzi He, Frank G. Shi

Chip-on-Board Packaging and Thermal Solutions for 100W Single Large Area LED
Jay G. Liu, Daxi Xiong, Paul Panaccione

Thermal Management for LED Pico Projector
Yong Chi, Anna Liu, Amy Au Yeung, Addison Cheung, ShouLung Chen, Chen-Jung Tsai, Enbo Wu

Benchmark Study of Metal Core Thermal Laminates
Glenn E. Oliver, Kurt Roberts, Dan Amey

Thermoplastic Solutions for Opto-Electronics Components and Packaging
Scot MacGillivray

Development of High Performance Optical Silicone for the Packaging of High Power LEDs
Yeong-Her Lin, Jian Pyng You, Frank G. Shi

Heat Pipe Cooling Technology and Its Potential Benefits to the LED Industry
Doreen Fulmer

Practical Guidelines for Vapor Chamber Applications for Power LED and Related Device Packaging
George A. Meyer IV, David Saums

Embedded Tutorial, Extended Abstract: Challenges of LED Thermal Standardization
Clemens J.M. Lasance, Andras Poppe

Water Level Packaging

Lithographic Process Characterization of a Low Temperature Curable Epoxy-based Dielectric for Advanced Packaging
Craig Franklin, Eric Huenger, Warren W. Flack, Ha-Ai Nguyen
# VOLUME 5

Next Generation Photoresist Removal Technology for Wafer Level Packaging ...................................................... 2487  
Cass Shang, David Maloney, Tomoko Aoki  
Processing and Performance of AL Polymer Films for Wafer Level Packaging ................................................................. 2507  
Alan Huffman, Jeff Piascik, Philip Garrou, Jay Im  
Solder Brace Coatings for Wafer-Level Chip Scale Packaging .................................................................................. 2532  
Candice Brannen, Russell Stapleton  
An Investigation of Diffusion Barrier Characteristics of Electroless Co(W,P0 Layer to Lead-Free SnBi Solder .................................................................................. 2564  
Hung-Chun Pan, Tsung-Eong hsieh  
Enhance Solder Ball Shear Test Value in WLCSCP ................................................................................................. 2587  
Dyi-Chung Hu, K.S. Liu, Smith Chen, Eric Wei, Ferry Hu  
Delivering High Reliability from a Wafer-Scale, Chip-Sized Package Incorporating a Through Silicon Via Solution ................................................................................... 2615  
Moshe Kriman, Bents Kidron, Giles Humpston  
Amkor's CSP\textsuperscript{\textregistered}: Comparison of Bump on Pad and Cu Redistribution WLCSP Designs ................................................................. 2642  
R. Anderson, T.Y. Tee, R. Chilukuri, H.S. NG, C.P. Koo, Brad Rogers  
Thermal Reliability Performance of Large Area WLCSP Arrays ............................................................................... 2670  
Umesh Sharma, Harry Gee, Phil Holland, Ram Swamy  
System Level Thermal Performance Optimization of Wafer Level CSP Designs ............................................. 2713  
Victor Chiriac  
A Simple Test-data-driven Lead-free Solder Joint Fatigue Life Predictive Model ...................................................... 2750  
Weidong Xie, Kuo-Chuan Liu  
Thermo-Electromigration Induced Failure in WL-CSP Pb-Free Solder Joints .............................................................. 2776  
Luhua Xu, Shih-Wei Liang, Di Xu, K.N. Tu, Stephen Gee, Luu Nguyen

## BioMedical

Precision Coating and Adhesive Dispensing for Medical Devices ................................................................. 2812  
Steve Adamson  
Low Volume Low Pressure Coating Practices ........................................................................................................ 2844  
Brad Rogers  
Artificial Spinal Disc Incorporates Gold-on-Golf Flip-Chip Technological Approach ................................................................. 2860  
Don Styblo  
Packaging and Processing of Neural Electrodes with Benzocyclobutene ................................................................................. 2911  
Bruce C. Kim, Jiping He  
Gas Compositions in Sealed Medical Device Enclosures ............................................................................. 2934  
R.K. Lowry, R.C. Kullberg, D.J. Rossiter  
A New Reconfigurable Biosensor Technique in a Microfluidic System ........................................................................ 2965  
Seokheun Choi, Junseok Chae
