International Symposium on Liquid Metal Processing and Casting

VAR Process

Numerical Simulation of the Thermal Behaviour of the Primary Material in Remelting Processes: Applications to VAR and EBM and Experimental Validation ..................................................3
  J. Bellot, P. Zabeti, H. Mir, J. Jourdan, P. Chapelle, and A. Jardy

Calibration of a Simulation Model for VAR with Respect to the Influence of Helium Cooling.......................................................................................................................................................13
  J. Terhaar, M. Maurischat, N. Blaes, D. Bokelmann, and K. Kelkar

A Unified 3D Model of the VAR Process .................................................................................................21
  V. Bojarevics, K. Pericleous, G. Djambazov, and M. Ward

Behaviour of Hard-α Inclusions in the Liquid Pool of a VAR Titanium Ingot .........................................29
  G. Ghazal, A. Jardy, P. Chapelle, and Y. Millet

Multiscale Modeling of the Onset of Freckle Formation during VAR ......................................................39
  L. Yuan, G. Djambazov, K. Pericleous, and P. Lee

An Analysis of the Use of Magnetic Source Tomography to Measure the Spatial Distribution of Electric Current during VAR ............................................................................................47
  B. Nair, and R. Ward

New Methods of VAR Process Control: Technical Challenges .................................................................57
  R. Williamson

A New Optical Emission Monitor for VAR ..................................................................................................65
  R. Aikin, and R. Williamson

Characterizing Arc Motion and Distribution during VAR .............................................................................75
  R. Woodside, and P. King

On the Origin of the White Spot Defect in Vacuum Arc Remelted Ingots ...................................................85
  F. Shved
Solidification

Comparison between Temperature- and Enthalpy-Based Formulations for the Energy Transport Equation in Solidifying Multi-Component Systems .................................................................97  
  V. DeFelice, A. Jardy, and H. Combeau

  C. Brundidge, T. Pollock, and D. VanDrasek

Heat Extraction and Dendritic Growth in the Liquid Metal Cooling (LMC) Directional Solidification Process ...............................................................................................................................119  
  J. Miller, and T. Pollock

High Thermal Gradient Directional Solidification with Liquid Metal Cooling and Its Application in the Processing of Nickel-Based Superalloys .................................................................127  
  L. Liu

Steel Processing

Manganese and Phosphorous Distribution Equilibrium between Converter Slags Saturated with 2CaO·SiO2 and MgO and Low Manganese Steel ...............................................................137  
  Z. Chen

Mathematical Modeling of Two Phase Flow in a RH Degasser .................................................................................................................................143  
  R. Tavares, C. Carneiro, and R. Reis

Simulation of Non-Metallic Inclusions Formation during Liquid Steel Reoxidizing ...............................151  
  A. Alexeenko, and E. Baybekova

Modeling Solidification and Slag Infiltration during Continuous Casting of Slabs ...............................159  
  P. Lopez, P. Lee, and K. Mills

Development of Flow Modifiers for the Mold to Reduce the Intermixing Length in Slab Casting ...........................................................................................................................................169  
  R. Tavares, R. Elias, F. Torres, and F. Policarpo

Kinetic Model of Hot Metal Dephosphorization in a Torpedo Car ...............................................................177  
  Z. Chen

Physic-Chemical Model of Degassing and Simulation of Metal Foam Formation at Vacuum Treatment .................................................................183  
  L. Kamkina, G. Stovpchenko, Y. Yakovlev, and O. Velichko

The Study of the Macrosegregation in Heavy Steel Ingots ........................................................................191  
  B. Sang, D. Liu, X. Kang, and D. Li
**ESR Process**

Bounds on Model Parameters for Computational Analysis of the ESR Process ........................................... 201

A. Patel, and M. Gierula

Couple Modeling of Electromagnetic, Fluid Flow and Heat Transfer in Slag Bath during Current-Conductive Mould ESR process ........................................................................................................ 213

F. Liu, Z. Jiang, X. Zang, and X. Geng

Estimation of Electroslag Remelting Process with an Unscented Kalman Filter ........................................... 225

J. Beaman, and S. Ahn

Numerical and Experimental Investigations on the ESR Process of the Hot Work Tool Steel W300 ........................................................................................................................................... 235

A. Kharicha, W. Schutzenhofer, A. Ludwig, and R. Tanzer

Thermophysical Properties of ESR Electrofluxes (Part 1: Density) ................................................................... 243

S. Akbari, J. Reitz, and B. Friedrich

On Nitrogen Pick-up during Pressure-ESR of Austenitic Steels .................................................................... 253

A. Patel, J. Reitz, J. Magee, R. Smith, G. Maurer, and B. Friedrich

Electroslag Remelting of Steels with Inoculation ............................................................................................. 265

M. Chatterjee, and P. Sarkar

New Plant Concepts for the Production of Large Size ESR Ingots ................................................................ 273

H. Holzgruber, A. Scheriau, and B. Rinnerhofer

Modeling of the ESR Ingot Enlargement ........................................................................................................ 287

L. Medovar

PESR Processing of TiAl-Electrodes Made by Aluminothermic Reduction ...................................................... 295

B. Friedrich, J. Reitz, T. Mionskowski, and J. Stoephasius

Quick Determination of Total Fluoride in Electroslag Refining Fluxes ............................................................. 303

K. Wroblewski, J. Fields, J. Fraley, R. Werner, and S. Rudoler

Investigation on Solidification Quality of Industrial-Scale ESR Ingot ............................................................ 309

Y. Dong, Z. Jiang, and Z. Li

**Process Optimization and Novel Techniques**

Levitated Liquid Droplets in AC and DC Magnetic Field .................................................................................. 319

V. Bojarevics, S. Easter, and K. Pericleous

Freckling Tendencies of Ni-Base Superalloys ..................................................................................................... 327

K. Kajikawa, T. Sato, and H. Yamada
Modeling of Macro-Segregation in a Permanent Mold Casting
L. Nastac, A. Patel, and G. Maurer

Thermoelectromagnetic Convection - An Alternative Stirring Technique in Metallurgy
A. Cramer, X. Zhang, and G. Gerbeth

The Use of Smooth Particle Hydrodynamics to Model Dross Formation during Crucible Tipping of Aluminum Melts
J. Taylor, M. Prakash, G. Pereira, and P. Rohan

New Measurement Protocol for Modulated Calorimetry Using Electromagnetic Levitation
J. Etay, and P. Schetelat

Physical and Mathematical Model of Aluminium Refining Process in the URC - 7000 Reactor
M. Saternus, and J. Botor

Precious Metal Recovery from the Used Auto Catalytic Converters
A. Fornalczyk, and M. Saternus

New Approaches for Recycling of Aluminum Scraps
J. Cui, and H. Roven

The Mechanical Properties and Corrosion Resistance of Cast and Wrought Hastelloy C are Significantly Enhanced When the Unwanted Complex Carbides are Removed through a Dissolution Process
G. Calboreanu
