2009 13th European Conference on Power Electronics and Applications

(EPE 2009)

Barcelona, Spain
8-10 September 2009

Pages 1-704
TABLE OF CONTENTS

Dead-Time Effects in Voltage Source Inverter Fed Multi-Phase AC Motor Drives and Their Compensation ................................................................. 1
M. Jones, D. Dujic, E. Levi, S.N. Vukosavic

Permanent Magnet Synchronous Motor for Passenger Ship Propulsion .................................................................................................................. 11
Rudolf Mecke

Improved Circuit of the Switched Coupled-Inductor Cell for dc-dc Converters with Very Large Conversion Ratio .................................................. 21
B. Axelrod, Y. Berkovich, S. Tapuchi, A. Ioannidis

Multilevel Dodecagonal Space Vector Generation for Open-end Winding Induction Motor Drive Using Conventional Three Level Inverters ............................................................................................................................................................................................................ 31
Anandarup Das, K. Sivakumar, Bijil Ramchand, Chintan Patel, K. Gopakumar

J. Vohecky, V. Zahrala, V. Komarnitsky

Simulation Tools to Study Power Electronics ......................................................................................................................................................... 47
Ziaja Baad, Valery Ilyonov, Türo Lehtia, Elina Pettau

Analytical Calculation of the PM Machine Magnetic Field Depending on Magnet Width and Skewing ................................................................. 56
Dieter Gerling

Tapping Wind Turbines to HVDC Lines ................................................................................................................................................................. 63
I. Martínez de Alegría, J. L. Martin, J. Andreu, H. Camblong, P. Ibáñez

Synchronous Drives with Field Oriented Vector Control and Their Industrial Implementation .................................................................................. 69
J.C. Le Claire

Three-Level H-Bridge Flying Capacitor Converter Voltage Balance Dynamics Analysis ........................................................................................................... 79
Alex Baderman, Boris Reznikov

A Maximum Speed of Response Control of Switches-based System ...................................................................................................................... 89
Anatoly Bekhishev, Albert Ishchakov, Lev Klyuchko, Vladimir Pospelov, Sergey Skrypov

Development of Inspection Robot System for Live-line Suspension Insulator Strings in 345kV Power Transmission Lines .................................................................................................................................................................................. 99
Joon-Young Park, Jae-Kyu Lee, Byung-Hak Cho, Ki Yong Ok

Double Boost Effect Topology for Three-phase AC/DC Converter with Unity Power Factor .................................................................................. 107
J.C. Le Claire

An Advanced Multilevel Inverter with a Regenerative Unit for Motor Drives .................................................................................................. 117
Koichiro Nagata, Haruo Nemoto, Toshio Katayama

Active Power Control Strategies for Inverter-Based Distributed Power Generation Adapted to Grid-Fault Ride-Through Requirements ............................................................................................................................................................................................................ 127
Fei Wang, Jorge L. Duarte, Marcel A.M. Hendrix

Effect of Motor Current Sampling Method on Motor Torque Ripple in High Torque Permanent Magnet Synchronous Machine Drives ............................................................................................................................................................................................................ 137
Duro Basic, Francois Malrait

New Algorithmic Modulation Strategy for Cascaded H-Bridge Inverters with IGCT Burst Capability Monitoring and Excellent Performance ............................................................................................................................................................................................................ 147
Timo Christi, Bernd Orlik

A Cost Effective Inverter Topology for Fuel Cell Residential Power Applications ........................................................................................................... 156
Ahmed F. Zohia, Mohamed Oralhi, Mohamed Yousef

A New Hybrid Two Phase Switched Reluctance Motor/Generator .............................................................................................................................. 164
A. Siadatan, E. Afjei, M.S. Toulabi

A New Class of Resonant Discharge Drive Topology for Switched Reluctance Motor ................................................................................................. 174
M. Asgar, E. Afjei, A. Siadatan

Bridgeless Boost PFC with Fast Dynamic Response Algorithm .......................................................................................................................... 183
B. Axelrod, Y. Berkovich, S. Tapuchi, A. Ioannidis

A Fuzzy-Logic Control Strategy for a Hybrid Fuel Cell-Battery System Offering Ancillary Services ........................................................................... 189
Christina N. Papadimitriou, Nicholas A. Yovos

Management of Power Excess in Wind Turbine System ......................................................................................................................................... 199
N. A. Orlando, M. Lisserre, A. Dell’Aquila

Stability of a DC/AC Converter Involving a Sliding Mode Voltage Controller .................................................................................................. 209
J.C. Le Claire, E. Frappé

The Monophasor Theory: Analytical Development and Practical Demonstration on a Single Phase Voltage Source Inverter ............................................................................................................................................................................................................ 218
Stephan Kenzelmann, Philippe Barrade, Yannick Louvrier, Alfred Rufer

Efficiency Optimization of Half-Bridge Series Resonant Inverter with Asymmetrical Duty Cycle Control for Domestic Induction Heating ............................................................................................................................................................................................................ 228
O. Lucía, J.M. Burdio, I. Millán, J. Acoro, S. Llorente

Neural Network Torque Estimator for Switched Reluctance Motor ....................................................................................................................... 234
Constantin Pavlitov, Hao Chen, Tassis Korbonov, Yanko Georgiev, Wang Xing, Xiaofu Zan

Experimental Comparison of Lamination Material Case of Switching Flux Synchronous Machine with Hybrid Excitation ............................................................................................................................................................................................................ 243
Emmanuel Hoang, Sami Hlioui, Michel Lecrivain, Mohamed Gabsi
Development of a Marine Diesel Particulate Filter (M-DPF) Applied for High Frequency Induction Heating

The Stability Analysis of AC-DC Systems Including Actuator Dynamics for Aircraft Power Systems

HPS Electronic Ballast with Modulation Index Control

Skewing Effect on the PM Flux-Linkage High Harmonics of the PM Machines with Delta Winding

Dynamic Analysis of PCM-Controlled Coupled-inductor Superbuck Converter

Weight and Efficiency Optimization Strategy of an Interleaved DC-DC Converter for a Solar Aircraft

Using the Chip as a Temperature Sensor- The Influence of Steep Lateral Temperature Gradients on the Vce(T)-Measurement

High-Resolution Digital PWM Controller for High-Frequency Low-Power SMPS

5-Level Double-Boost PFC with Fault-Tolerant Capability

Potential of Improving PWM Converter Power Density with Advanced Components

Design and Experimental Investigation of Space Vector Modulation for Three-Leg Four-Wire Voltage Source Inverters

Use of Participation Factors and Parameter Sensitivities in Study and Improvement of Low-Frequency Stability

Economic and Versatile Laboratory Setup for Teaching Power Electronics in Bachelor Courses

A New Approach to Design High Performance Current Controllers for Grid Connected Voltage Source Converters

Coreless Current Measurement Transducer and Instrument for Distorted and Noisy Currents

Sliding Mode Control of Boost Converter: Application to Energy Storage System Via Supercapacitors

Torque Control Scheme for PMSM in Overmodulation Range

Robust Stability of the Current Control System to Parameter Errors in Sensorless Control Based on Maximum Torque Control Frame

A Novel High Power Permanent Magnet Reluctance Generator using Ferrite Magnet

Battery Monitoring Current Sensors: The Fluxgate Concept

Improvement for Very High Efficiency Chopper Circuit SAZ

Influence of the Current Ripple on the Hydrogen Fuel Cell Powered Inverter System Efficiency

A New Sensorless Control for Switched Reluctance Motor

Control Strategy for Hybrid Power Filter to Compensate Unbalanced and Non-linear, Three-phase Loads

IGBT Selection Method for the Design of Resonant Inverters for Domestic Induction Heating

Design Considerations for Medium-Frequency Power Transformers in OffshoreWind Farms

Characterization of a New PLC Modem for an Industrial Application

Combined Mechanical and Electrical Control of Solar Trackers in (QPV) Power Plants

Active Self-Switching Methods for Emerging Monolithic Bidirectional Switches Applied to Diode-Less Converters

Integrated Control of Single-Phase Four-Quadrant Line-Side Converter and Machine-Side Inverter for Railway Traction Applications

LQ-Optimized Multivariable Control for a Single-Phase 50-kW, 16.7-Hz Railway Traction Line-Side Converter

Constant Power Cycling for Accelerated Ageing of Supercapacitors

</table>
Measurement Method for PV Modules Based on DC-DC Converters with Microcontroller

New Asymmetrical Hybrid Multilevel Voltage Inverter

Single-Phase PWM Boost-Type Unidirectional Rectifier Doubling the Switching Frequency

Rotor Position Sensor Fault Detection Isolation and Reconfiguration of a Doubly Fed Induction Machine Control

A New InterCell Transformer for Interleaved Converters

Use of Kalman Filters for Renewable Energy Sources Isolation Transformers Current Harmonics Compensation

Coordinated Control for Grid Connected Power Electronic Converters Under the Presence of Voltage Dips and Harmonics

Analog Fixed Maximum Power Point Control for a PWM Step-down Converter for Water Pumping Installations

Induction Motor Encoderless Control Associated to a Sinus Filter for Industrial High Power Application

Central Storage Unit Response Requirement in ‘Good Citizen’ Microgrid

Hybrid Excited Flux-Switching Permanent Magnet Machines

Real-Time Simulation of a PMSM Drive in Faulty Modes with Validation Against an Actual Drive System

A High Frequency Planar Transformer-Linked ZVS DC–DC Converter with Secondary-Side Phase-Shifting

Direct Power Control Based Indirect AC to AC Power Conversion System

A New Loss Minimization Approach with Flux and Torque Ripples Reduction of Direct Torque Controlled Permanent Magnet Synchronous Motors

Digital Repetitive Control of a Three-Phase Flat-Top-Modulated Grid Tie Solar Inverter

A Converter Topology for High Speed Motor Drive Applications

A Three-Phase to Single-Phase Matrix Converter for High-Frequency Induction Heating

Magnetic Circuit Analysis of a Linear Switched Reluctance Motor

DFIG Based Standalone Power System Operating at Low Load Conditions

Power Management Strategies of a DC-Coupled Hybrid Power System in a Microgrid for Decentralized Generation

Compensation of Load Unbalance, Reactive Power and Harmonic Distortion by Cooperative Operation of Distributed Compensators

Closed-Loop Regulated Power Supply for Ozone Generation Based on Buck Converter and Current-Fed Push-Pull Resonant Inverter

Parallel Connection of Resonant Converters Based on Piezoelectric Transformers

AC and DC Output Fuel Cell Hybrid System: Design, Building and Testing

F Gate Drive Circuit for a Normally-On SiC JFET with Inherent Safety

Accurate Modelling of Traction Inverter Losses for Efficiency Calculation in Parallel Hybrid Electric Vehicles

Mohammad Reza Nikzad, Ahmad Radan
Selection of Optimal Frequency Band for Motor Cable Communication .......................................................... 1675
1.5-kW, 150,000-r/min Ultra High-Speed PM Motor Fed by 12-V Power Supply for Automotive Supercharger .......................................................... 1684
Analysis of Dynamic Performance of Multilevel Modulators with Switching Pattern Restricted to Single Voltage
Level Steps .................................................................................................................................................. 1694
Toward the Implementation of Booster Dipole Magnet Power supply to 3GeV Synchrotron Light Source............................................................................................................................. 1703
Improved Techniques of Restrained Search Predictive Control for Multiphase Drives................................. 1709
Control of a Doubly-Fed Induction Generator Under Unbalanced Conditions Considering the Converter Limits ........................................................................................................................................... 1718
Microcontroller Software Applied to Electronic Ballast Design ................................................................... 1726
Pressure Tolerant Power IGBTs for Subsea Applications ............................................................................. 1734
Enabling Pressure Tolerant Power Electronic Devices for Subsea Applications ............................................. 1744
Repetitive Control for a Dynamic Voltage Restorer for Power-Quality Improvement .................................... 1754
FPGA Design of a Robust Phase Locked Loop Algorithm for a Three Phase PWM Grid Connected Converter ........................................................................................................................................... 1764
Teaching Power Flow Oriented Modelling of Dynamic Systems – Basics ....................................................... 1774
A Novel Approach of Direct Active and Reactive Power Control Allowing the Connection of the DFIG to the Grid ........................................................................................................................................... 1803
High Efficiency DC-DC Converter Using a Series-Parallel Compensation Method for a Fuel cell ........................................................................................................................................... 1813
Control of Single Active Switch Cascade Boost Converter for Fuel Cell Applications ...................................... 1822
E-Learning Practical Teaching of Uncontrolled Rectifiers ............................................................................ 1830
Failure Characteristics of Motor System Using Distributed Inverters for PMSM .................................................. 1840
Current Sharing in Multiphase Boost ZVS Active-Clamping Converters ......................................................... 1859
Dynamic Current Sharing in Multiphase Active-Clamping Converters ............................................................. 1868
Power Electronics Interface for an Hybrid PEMFC Generating System with Fault Management Strategies for Transportation ........................................................................................................................................... 1877
High-Temperature Stability Performance of 4H-SiC Schottky Diodes .............................................................. 1887
High Efficiency Z-Source Inverter Properties Using Advanced PWM Methods ................................................. 1893
Power Factor Correction Boost Converter Operating in Mixed Conduction Mode .............................................. 1902
Calculation of Motor Surge Voltage Under the Use of a Surge Suppression Cable ........................................... 1912
Optimal Control for AC Drive with Quadratic Criteria ..................................................................................... 1922
Lyapunov Based Predictive DTC Algorithm for Induction Motors ................................................................. 1932
Sensorless Flux Model of Induction Machines Using Cross-Saturation Effects Based on a Virtual Air Gap ........................................................................................................................................... 1942
A Low Cost DSP-Based Control Method for High Frequency Parallel Resonant Current-Fed Inverters ............ 1952
Experimental Characterisation and Modelling of High-Voltage IGBT Modules Off-State Thermal Instability .......... 1959
Active Harmonic Filters and Balance Compensation on Electric Railway Systems Using the Open Delta Transformer Connection ................................................................. 2241
Alexander Bueno, María Isabel Gímenez, José Restrepo, José Manuel Aler
On-Line Junction Temperature Measurement of IGBTs Based on Temperature Sensitive Electrical Parameters ................................................................. 2249
Harald Kuhn, Axel Mertens
Design Considerations of a Current-fed DC-DC Converter with High Voltage Gain for Fuel Cell Applications ................................................................. 2259
A. Averber, K.R. Meyer, A. Mertens
Mathematical Model of a Reactive Homopolar Synchronous Machine with Stator Excitation ................................................................. 2269
Topor, Luciano Usai, Gabriel Nicolau Papa, Cristian Abrudean
3-Level IGBT Modules with Trench Gate IGBT and Their Thermal Analysis in UPS, PFC and PV Operation Modes ......................................................... 2278
Marco Honsberg, Thomas Radke
A Multi-Drive System Based on Direct Power Converter ................................................................. 2285
Dinesh Kumar, Patrick W. Wheeler, Jon C. Clare
LUDMOS Transistors Optimization on a 0.18um SOI CMOS Technology ................................................................. 2295
Sorin Ioan Deaconu, Marcel Topor, Lucian Tutelea, Gabriel Nicolae Popa, Cristian Abrudean
Modeling and Simulation of Marine On-Board Electrical Network ................................................................. 2305
P. N. Kvesha, M. Ali-Ahmed, G. Lebret, G. Yao
Fundamental Tarification of Electricity ......................................................................................................... 2315
Alex Van den Bossche, Bart Meersman, Lieven Van de Velde
A Comparison of Low Speed Sensorless Control Techniques for Low Voltage PM Machines ................................................................. 2322
Adam Curzon, Mark Sumner
Stabilization of the DC-link for Inverters with PDM Power Control ................................................................. 2332
Jaime Estève, E. J. Dede, J. Jordán, C. G. Taxas, E. Sanchís-Kilders, E. Maset
Energy-Based Modelling and Simulation of a Series Hybrid Electric Vehicle Propulsion System ................................................................. 2341
Raul S. Munoz-Aguillar, Arnaud Doria-Cerezo, Paul F. Paleston
Hybrid Drive System of an Industrial Truck Using a Three-Phase DC-DC Converter Feeding Ultra-Capacitors ................................................................. 2351
C. Rudolph
Low Voltage Ride-Through Capabilities of Wind Plant Combining Different Turbine Technologies ................................................................. 2361
Alexandre Teigne, Daniel Roey, Sediq Bachea, Jerome Daval
Accuracy of the Sensorless Determined Rotor Position for Industrial Standard Drives in the Whole Speed Range ................................................................. 2370
Manfred Schrödl, Wolfgang Saffler, Matthias Hafer
Power System for Electrical Propulsion in Space Applications ................................................................. 2376
State-Space Average Modelling of Synchronous Generator Fed 18-Pulse Diode Rectifier ................................................................. 2386
Antonio Griffo, Jiabin Wang
Switched Reluctance Motor for Electric Power-Assisted Steering ................................................................. 2396
Ludmila M. Zuluaga, Hervé Berviller, Jean Philippe Blondé, Charles Hubert Kom, Martin Kom, Francis Braun
Active Phase-Shift Control of Multi-Phase Converters to Minimize Input Current Sub-Harmonics ................................................................. 2405
S. Utz, M. Stadler, J. Pjorr
Stability Assessment of Electric Power Systems for ‘More Electric’ Aircraft ................................................................. 2415
Antonio Griffo, Jiabin Wang
Agent-Based Control of Parallel DC-DC Converters ................................................................. 2425
J. Hamar, A. Toth
Multicarrier and Space Vector Modulation for Three-Phase NPC Converters: A Comparative Analysis ................................................................. 2345
Ivo Pereira, António Martins
Control Strategies and Inverter Topologies for Stabilization of DC Grids in Embedded Systems ................................................................. 2445
Nicolas Patin, The Dung Nguyen, Gary Friedrich
Control of System with the Switched Actuator Rate Limitation ................................................................. 2454
A gordas Baskys, Valerijus Zisniaks
Extension of the Operational Range of High Performance Line-Commutated Converters into Discontinuous Current Mode ................................................................. 2462
Jon Are Stol, Kjell Ljøkelsøy, Tore Undeland
Implementation of Three-Phase Frequency Converters Based on PWM AC Matrix-Reactance Chopper with Buck-Boost Topology ................................................................. 2469
Zhiguo He, Zhen Li, Jinlong Wang, Grzegorz Tadra
Adaptive Sliding-Mode Neuro-Fuzzy Control of the Sensorless Induction Motor Drive with MRAS Estimator ................................................................. 2489
Teresa Orloskowska-Kowalska, Mateusz Dybizkowski, Krzysztof Szubat
FPGA Implementation of Harmonic Detection Methods Using Neural Networks ................................................................. 2497
Serge Rasul Dzodé Naoussi, Hervé Berviller, Jean Philippe Blondé, Charles Hubert Kom, Martin Kom, Francis Braun
A New Switched Inductor VAR Compensator ................................................................. 2507
Christos Maroukas
Thermal Evaluation of a Medium Frequency Transformer in a Line Side Conversion System ................................................................. 2517
Tommy Kjellqvist, Staffan Norrga, Stefan Ortslund, Kalle Iver
An FPGA Controlled DC/DC Step-Up Converter for Automotive Applications ................................................................. 2527
M. Chiaro, G. Botto, M. De Giuseppe
Generalized Multi-Cell Voltage Sourced Converter ................................................................. 2535
Abdelrahman Hagar
Resonant Converters for Pulsed Electrochemical Applications
Kathryn Klement, Francis Davison, Steven Thorpe ................................................................. 2541
Local Supervisory Algorithm for Reactive Power Dispatching of a Wind Farm
T. Ghennum, B. Francois, E.M. Berkouk .................................................................................. 2549
EMI/EMC Troubleshooting Techniques in Switching Mode Power Supplies
Arturo Mediano ...................................................................................................................... 2559
A Zero-Current-Switch Quasi-Resonant Boost Converter with Transformer Compensated Clamp Circuit
E. Firmaniyan, S. Tomiska, S. Abe, M. Shoyama, T. Nishimya .................................................. 2564
End-Winding Effect on Shaft Voltage in AC Generators
Jafar Adabi, Firuz Zare, Arindam Ghosh .............................................................................. 2572
Different Approaches to Reduce Shaft Voltage in AC Generators
Firuz Zare, Jafar Adabi, Arindam Ghosh .............................................................................. 2582
Application of Dynamic Hysteresis Band Height Control to Improve Output Voltage Transient in Boost and Positive Buck-Boost Converters
Arash A. Boora, Firuz Zare, Arindam Ghosh ................................................................. 2591
Simplified Model Simulation Platform for Multi-Domain High Density Converter Design
Yusuke Hayashi, Kazuto Takao, Hiromichi Ohashi .................................................................. 2599
A New Technique of Torque Ripple Reduction in Saliency-Based Sensorless Drive IPM Motors for General Industrial Applications
Y.Kano, T.Kouaka, N.Matsui, T.Nakanishi ........................................................................... 2609
Signal Injection Method without Torque Variation for Salient-Pole Synchronous Motors
Takuma Ohnoma, Shinji Doki, Shigeru Okuma ....................................................................... 2619
Feed-Forward Compensation for Multilevel Cascaded H-Bridge StatComs
G. Mirzaeza, G. Townsend, T.J.Summers .............................................................................. 2625
Novel Control Strategy for Single-Phase to Three-Phase Power Converter Using an Active Buffer
Yoshija Ohnuma, Jun-ichi Ishi ............................................................................................... 2635
Dead-Time Compensation for Multilevel H-Bridge Power Converters with Novel Voltage Balancing
R.E. Betz, T.J. Summers, G. Mirzaeza ...................................................................................... 2645
Phase Leg Voltage Balancing of a Cascaded H-Bridge Converter Based STATCOM using Zero Sequence Injection
T.J. Summers, R.E. Betz, G. Mirzaeza ...................................................................................... 2655
Estimation of Future Demand for Neutron-Transmutation-Doped Silicon Caused by Development of Hybrid Electric Vehicle and Its Supply from Research Reactors
Klaus Krischan, Guenther Dannerer, Roland R. Seebacher .................................................... 2665
Myong-Seop Kim, Sang-Jin Park, In-Cheol Lim ................................................................. 2675
Analytical Approach of Saturation Voltage Instability in High-Speed IGBT
Mitsuru Kameda, Chihiro Tadokoro, Akira Kiyoi, Shigeru Kasunoki, Hiroshi Kurokawa .... 2675
On the Selection of Single Phase Induction Motors for Low Cost Speed Controlled Drives
Klaus Krischan, Guenther Dannerer, Roland R. Seebacher .................................................... 2685
Optimization of PWM Dead Times in DC/DC-Converters Considering Varying Operating Conditions and Component Dependencies
Tomas Reiter, Dieter Polonov, Hartmut Priebste, Hans-Georg Herzog .................................. 2695
Remote Laboratory Monitoring of Rectifiers and Harmonic Current Generation
Andreas Sumper, Roberto Villafagila-Bobles, Oriol Gomis-Bellmunt, Rodrigo Ramirez-Pisco, Raúl Perez-Jimenez .......................... 2705
Poly-Phaseed Matrix Converter for Large Synchronous Generators – Design of the Voltage Surge Protection
A. Belgiau, A. Rupfer, A. Lacaze ............................................................................................. 2714
Control of a Piezoelectric Hysteresis Actuator ..................................................................... 2724
Oriol Gomis-Bellmunt, Filica Khounme, Daniel Montesinos-Miracle, Samuel Galceran-Arellano, Joan Ball-Duran
Electro-Thermal Behaviour of a SiC JFET Stressed by Lightning-Induced Overvoltages
Dominique Bovigne, Arif Hammoud, Dominique Tournier, Cyril Buttay, Youness Amiech, Pascal Belvalqua, Abderahume Zououi, Hervé Morel, Bruno Allard ................................................................. 2730
Online Estimation of Signal Parameters in the Presence of Harmonic and Noise Distortion
Ramin Agha Zadeh, Arindam Ghosh, Gerard Ledwich, Firuz Zare ........................................ 2738
Modeling the Induction Machine’s Main Inductance As a Function of the Supply Frequency and the Magnetizing and the Torque Building Component of the Stator Current
Roland R. Seebacher, Guenther Dannerer, Klaus Krischan, Reinhard Ingruber .......................... 2748
Dynamic Modeling of the SRM Using the Macromodeling Approach: Comparison of Simulation and Experiment
Nizar Khateeb, Klaus Muehlbauer, Dieter Gerling .................................................................. 2758
Elimination of Harmonic Spikes Using Second-Order Space Dithered Sigma-Delta Modulation
Seo-Hyeong Kim, Kyo-Beom Lee .......................................................................................... 2767
Improved Robust Phase Locked Loop for Utility Grid Applications
Mohamed C. Benhabib, Fei Wang, Jorge L. Durair .................................................................. 2777
Three-Level Three-Phase Neutral-Point-Clamped Back-to-Back Converter Applied to a Wind Emulator
Alejandro Carle, Joao Rocabert, Sergio Busquets-Monge, Josep Bordonsau, Salvador Aleuq, Ioan Peracaula ................................................................. 2785
A Single Phase Multi-String PV Inverter with Minimal Bus Capacitance
John Sch onberger .................................................................................................................. 2797
Robustness Evaluation of Deadbeat, Direct Torque and Flux Control for Induction Machine Drives
Rainer E. Heinbokel, Robert D. Lorenz ..................................................................................... 2805
Torque Ripple Minimization for a Switched Reluctance Motor
Baldul Blanqu, Arnau Doria-Cerezo ...................................................................................... 2815
A New Multiple-Stage Converter Topology for High Power and High Precision Fast Pulsed Current Sources
Jean-Marc Cravero, Carlos De Almeida Martins, Rogelio Garcia Retegui, Nicol\’as Wassinger, Mario Benedetti .......................... 2823
An Unbalance Voltage Compensator Using a Fast On-Load Tap Changing Regulator

Mehdi Nasr, Arnaud Vergnot, Jonathan Sprooten, Benoit Robyns

Fast Dynamic Response Multilevel Converter for Voltage Tracking Applications

M. Rodriguez, A. Rodriguez, P. F. Muñoz, J. Sebastian

Fiction Control with a Piezoelectric Actuator

Gaston M'Boungou, B. Lemaire-Semal, F. Giraud

Harmonic Content Identification Based on Neural Network for Single Phase Power Systems

An Improved Full Bridge Converter with Multiple Outputs for Barrier Discharge and U.V. Lamp Ballast

J.W. Baek, J. H. Kim, M. H. Ryu

Comparison of Three Switching Strategies for Indirect Matrix Converter

Ali Reza Jahangiri, Ahmad Badan, Mehdi Haghbehesa

Design Considerations for SMES Systems Applied to HVDC Links

Shinichi Nomura, Norihito Tanaka, Kenji Tsutui, Hiroaki Tsutsui, Shinji Tsuji-Iio, Ryuichi Shimada

Comparison of 30KW DC/DC Converter Topologies Interfaces for Fuel Cell in Hybrid Electric Vehicle

Monzer Al Saikka, Joeri Van Mierlo, Hamid Gualous, Philippe Lataire

A Methodology for Developing ‘Chainlink’ Converters

Colin Oates

18 Pulse Controlled Rectifier: A Case Study on UPS

Ibrahim Sefa, Necmi Atli, Ilhami Colak, Sultan Özdemir

Closed Loop Temperature and Repetition Rate Control for Accelerated Pulse Stress Testing of Smart Power

Hans-Peter Kreuter, Michael Glavanovics, Christoph Schreiber

Real Time Parameter and Models Determination in Saturated Inductors Submitted to Non-Sinusoidal Excitations

Ramon Bargalló Perpiñá, Manuel Roman Lamarba, Alfonso Conesa Roca, Guillermo Velasco Quezada

Design and Analysis of a DC/DC/AC Three Phase Solar Converter with Minimized DC Link Capacitance

B. Wirig, W. T. Prante, F.W. Fuchs

LLCC Resonant Converter as Maximum Power Point Tracker in PV Systems

Alfonso Conesa, Guillermo Velasco, Herninto Martinez, Manuel Roman

Comparison of Non-Resonant and Super-Resonant Dual-Active ZVS-Operated High-Power DC-DC Converters

Robert Lenke, Florian Mura, Rik W. De Doncker

Resonant Frequency Tracking Control by Using One CT for High Frequency Inverter

Lyapunov Based Nonlinear Control of TCSC System

Abdelkrim Benchaita, Serge Poullain, Frederic Heliodore

A Novel MPPT Algorithm for Dual-Inverter Grid-Connected PV Applications

Gabriele Grandi, Darko Ostojic, Claudio Rossi

European Efficiency Improvement in Photovoltaic Applications by Means of Parallel Connection of Power

Converters

Michel Glavanovics, Hans-Peter Kreuter, Roland Sleik, Christoph Schreiber

High Performance AC-DC notebook PC Adapter Meets EPA 4 Requirements

Alberto Stroppa, Claudio Spinhi, Claudio Adragua

Comparison of Fields Emitted from High Frequency Silicon-Integrated, Microfabricated Inductors

Michal Lazarczyk, Noel Barry, Terence O’Donnell

Cycle Stress Test Equipment for Automated Short Circuit Testing of Smart Power Switches According to the AEC

Q100-012 Standard

Designing LLC Resonant Converters for Optimum Efficiency

C. Adriagna, S. De Simone, C. Spini

Complementary MOS Structures for Common Mode EMI Reduction

Manh Hung Tran, Jean-Christophe Crebier

Design and Realization of Autonomous Power CMOS Single Phase Inverter and Rectifier for Low Power

Conditioning Applications

A Neural Network Based Alternator Power Angle Estimation Method For Marine Electrical Network Supervision

and Control

A Study of Common Mode Current Reduction in PWM Inverter with Core Modeling and System Simulation

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Sigma–Delta Modulation for VSI driven Asymmetric Dual Three–Phase AC machines

Model Predictive Direct Torque Control for MV Drives with LC Filters

Silvia Mastellone, Georgios Papafotisou, Evangelos Liakos

An Unbalance Voltage Compensator Using a Fast On-Load Tap Changing Regulator

Rodolfo Echavarria, G. Acoosa-Villarreal, Ciro Núñez
A Novel Pulsewidth Modulation to Operate a Bidirectional Two-Stage DC-AC Converter with High-Frequency Stage

Isolation in Discontinuous Conduction Mode for Photovoltaic Applications

Modeling of a Three Phase SPWM Multilevel VSI with Low THD Using Matlab/Simulink

High Efficient Inductive Energy and Data Transmission System with Special Coil Geometry

Survey on Microgrids: Analysis of Technical Limitations to Carry Out New Solutions

The Usage of a PWM Rectifier to Improve Three-Phase Induction Motor Drive Performance Under Fault Conditions

Optimization of the Stray Inductance in Three-Phase MOSFET Power Modules Aided by Means of PEEC Simulation

A Components Library for Simulation and Analysis of Aircraft Electrical Power Systems Using Modelica

Speed-Sensorless Induction Motor Control with Torque Compensation

Indoor Power Harvesting Using Photovoltaic Cells for Low Power Applications

Harmonic Detection Methods of Active Filters for Adjustable Speed Drive Applications

Sensorless Speed Control with a MRAS Speed Estimator for Single-Phase Induction Motors Drives

Soft-Switching Three-Phase PWM Inverter Architecture Utilizing Coupling Switches Between Input and Output Stage

Switching Strategies for DTC on Asymmetric Converters

Reducing of the Average Switching Frequency Using Three-Level Active-SNPC Converter

Modeling and Simulation of 2 kV 50 A SiC MOSFET/JBS Power Modules

Reducing of the Average Switching Frequency Using Three-Level Active-SNPC Converter

A Multi-Level Simulation Using VHDL-AMS and Coupled Analysis for an Alternator Regeneration System in a Vehicle

Optimization of the Magnetic Circuit of an Axial Inductor Machine Based on the Calculation and Analysis of Magnetic Field

Exploring Potentials and Performance of Two Circuit Architectures to Develop a New Integrated Switch Dedicated to Self-Switching Power Converters

Discontinuous Modulation of Multi-phase Inverter-Fed AC Motors

Automatic Global Modelling of Static Converters for Power Electronics Systems: Taking Into Account of Causality Aspects for Model Coupling

Current Balancing Strategy in Parallel-Connected Legs of Power Inverters

A Solid State 100kV Long Pulse Generator for Klystrons Power Supply

A Robust Sensorless AC Motor Drive based on Simple Flux Observer with Voltage Error Compensation

An Experimental Study on Induction Motor Drive with a Single Phase – Three Phase Matrix Converter

Symmetrical and Unsymmetrical Voltage Sag Effects on the Three-phase Synchronous Machine Stability

On Dynamics and Voltage Control of the Modular Multilevel Converter

Grid Connected Inverter Behavior with an Output LC Filter Under Voltage Sag Operation

Uncontrolled Rectifiers for HVDC Connection of Large Off-Shore Wind Farms

The Optimal Control for Position Drive System with Induction Machine
Turn On Switching Losses Analysis for Si And SiC Diodes In Induction Heating Inverters .................................................. 3388
Adaptive Full Order Observer Based Stable Speed Sensorless Scheme for Vector Controlled Induction Motor Drives .................................................................................................................. 3397
Iban Vicente, Aitor Endemaño, Xabier Garin, Martin Brown
Short-Circuit Critical Frequency for Induction Heating Parallel Resonant Inverters ................................................................. 3407
Model-Based Sensorless Control of an SPM Synchronous Motor Drive for a Hybrid Catamaran .............................................. 3416
Salvador Arias, F. Bolognani, A. Räikkönen
Characterization of IGBT Devices for Use in Series Resonant Inverter for Induction Heating Applications .................................. 3426
Stand-Alone DC Power Plant Supplied by an Alternative Energy Integrated Modular System .................................................. 3434
S. Castellan, M. Della Valentina, A. Tesarollo, G. Vinciguerra
Voltage-Oriented Vector Control of Induction Motor: Principle and Dynamic Performance Improvement................................. 3442
Yongdong Li, Juanjuan Sun
Design and Optimization of a Printed Circuit Board for a Photovoltaic and Thermal Linear Solar Concentrator .................... 3452
Leonardo Serri, Mattia Bertalini, Alberto Beati
Comparison of H-NPC and parallel-H topologies for AC Traction Front End Converters ............................................................... 3462
A. Lopez-de-Heredia, H. Gatzanaga, L. Aldasoro, T. Nieva
Design and Development of a Supercapacitor-Based Microgrid Dynamic Support System ................................................... 3471
E. Bilbao, H. Gatzanaga, L. Mir, E. Etxeberria-Otadui, A. Milo
Over-Current Turn-Off Failure in High Voltage IGBT Modules Under Clamped Inductive Load .................................................. 3481
A System-Level Approach to the Optimal Dimensioning of Induction-Motor Variable-Frequency Drives ............................... 3491
Alberto Tessaro, Davide Giulio, Mario Mezzarobba
Analysis and Simulation of a Novel Load-Commutated Inverter Drive Based on a Symmetrical Five-Phase Synchronous Motor ........................................................................................................... 3501
Alberto Tessarolo, Simone Castellan, Roberto Menis
Powering and Control Strategy for the Main Quadrupole Magnets of the LHC Inner Triplet System ........................................... 3512
F. Bordry, D. Nisbet, H. Thiessen, J. Thomsen
Firing Strategy For Bidirectional Current Switches with Unidirectional Voltage Blocking Capability in Induction Heating Parallel Resonant Inverters ................................................................. 3522
Comparison of High Dynamic Current Tracking Methods for Multiswitching Systems .......................................................... 3529
Maria Stefania Carmeli, Francesco Castelli-Dezza, Gabrio Superti-Furga
Limitation of Inductive Power Transfer for Consumer Applications .......................................................................................... 3538
Eberhard Waffenschmidt, Toine Staring
Multilevel Converters for High Fundamental Frequency Application ........................................................................................ 3548
L. D'Errico, A. Lidozzi, V. Serrao, L. Solero
IGBT Cross Conduction Phenomenon - Origin and Simple Protection Gate Driving Technique .................................................... 3562
Petar J. Grbovic, Michel Arpuilierre
Integrated Simulation of a Doubly Fed Induction Generator Wind Turbine .............................................................................. 3572
Montserrat Mata-Damenjo, Javier Sanchez-Navarro, Michelle Rossetti, Adrià Junyent-Ferré, Oriol Gomis-Bellmunt
Influence of Magnetic Saturation of Non-salient Pole Permanent Magnets Synchronous Motors on Performance of a Servo Drive ...................................................................................................... 3579
Radoslaw Nalepa, Fabian Mink, Stephan Reineke, Alexander Bühr
Real-Time Power-Hardware-In-the-Loop Facility for Shunt and Serial Power Electronics Benchmarking ................................. 3588
Dan Ocanu, Sediik Bcha, Julian Munteanu, Christian Dufour, Daniel Roye
New Modulator for Multi-Phase Interleaved DC/DC Converters .............................................................................................. 3595
Rogelio Garcia Retegui, Mario Benedetti,Roberto Petrocelli, Nicolás Wassinger, Sebastián Maestri.
Educational Tool for Teaching of Semiconductors ......................................................................................................................... 3603
Rogério Santos, Rui Chibante, Armando Araújo, Adriano Carvalho
2 Transistors + 2 Diodes-based PEBB Designed for General Applications in Power Electronics ................................................... 3612
Joan Nicolás, Joan Rocafort, Josep Bordonau, Sergio Bausquets-Monge, Salvador Alepuz, Juan Antonio Martínez-Velasco, Joan Peracaula
Transformerless STATCOM Based on a Five-Level Modular Multilevel Converter .............................................................. 3622
Grain, P. Adam, O. Ayano-Lara, F. Burt, J. McDonald
Resonant Inverter with Output Voltage Pulse-Phase-Shift Control for DBD Plasma Reactor Supply .............................................. 3632
André Luiz Fuerback, Cícero da Silveira Postiglione, Claudinoit Bitencourt Nascimento, Arnaldo José Perin
High Power–Factor Resonance–Free Electronic Ballast Based on Integration Techniques to Drive High Intensity Discharge Metal Halide (HID–MH) Lamps ........................................................................ 3641
Peter Tant, Frank van der Schans, Michel de Jongh, Geert Deconinck, Johan Driesen
Power Processing Unit for the Next Generation Satellite........................................................................................3676
Z-Source Drive Inverter Using Modified SVPWM for Low Output Voltage and Regenerating Operation .........................................................3684
Moritz von Zimmermann, Martin Lechner, Bernhard Piepenbreier
Analysis, Design and Implementation of a Three-Phase AC to DC Converter Using Single-Phase Isolated CUK Rectifier Modules with Small DC Bus Capacitor ........................................................................3694
Uthan Kamnarn, Sarawut Yousawat, Yuithana Kanthaphayao, Viboosun Chunkag
Control of Power Electronics Driving a Switched Reluctance Linear Generator in Wave Energy Applications ..................................................3704
Dawei Xiang, Shaoyong Yang, Li Ran, Peter Tavner, Angus Bryant, Philip Maoby
Change of Terminal Characteristics of a Voltage-Source-Inverter (VSI) Due to Semiconductor Device Degradation ........................................3713
Boonelkha M. hamed, Ould-aisssa Ahmed, Taieb Ali, El merrouati Kadijia, Boudissa Elghalia
A 600KW Electrical Balance Of Plant with LCL Filter for Molten Carbonate Fuel Cell .................................................................3731
Kwang-Seob Kim, Chang-Jin Lim, Tai-Sik Hwang, Byung-Ki Kwon, Ja-Sik Kim, Chang-Ho Choi, Sung-Gap Choi
Analysis of Current Characteristics of Parallel Three-Phase Voltage Source Inverters .............................................................................3738
Toni Ikonen, Julius Luukko, Riku Piltänen
Frequency / Duty Cycle Control of LCC Resonant Converter Supplying High Voltage Very Low Frequency Test Systems ........................................................................................................3748
Manli Hu, Norbert Fröhleke, Joachim Böcker
Active du/dt Filtering for Variable-Speed AC Drives .................................................................................................................3758
J.-P. Ström, J. Tytser, J. Korhonen, K. Rauma, H. Sarin, P. Silventoinen
Exact Predictive Direct Power Control of Three-Level NPC Converters for Wind Power Applications ......................................................3768
E. Querubide, A. Martinez-Jarthe, S. Saurisco, M.A. Rodriguez-Vidal, E. Calvo, S. Auriol, S. Asensio
Silicon Carbide PIN Physically-Based Model Implemented in the Pspice Circuit Simulator .............................................................................3777
L. H. Gonzalez, A. Claudio, M. A. Rodriguez, M. Ponse, P. Bonales, C. Zuniga
Carrier-Based PWM with Minimum Power Losses for IGBT Multiphase Inverters .................................................................................3785
Domenico Casadei, Michele Mengoni, Giovanni Serra, Angelo Tani, Luca Zarrì
Control Design and Experimental Verification of a Multi-Function Single-Phase Bidirectional PWM Converter for Renewable Energy Systems ........................................................................................................3795
Radiy Bekbudov
Low Speed and Regenerating Operation of Sensorless Vector Control System of Induction Motor Using Observer Gain Tuning and High Frequency Injection Technique ........................................................................3815
Kazuhiko Ohyama, Greg Asher, Mark Sumner
Diagnosis of Open-Circuit Faults in Matrix Converters ................................................................................................................3823
S. M. A. Cruz, M. Ferreira, A. J. M. Cardoso
The Influence of Turn-Off Dead Time on the Reverse-Recovery Behaviour of Synchronous Rectifiers in Automotive DC/DC-Converters ..................................................................................................................3834
Dieter Polenov, Tomas Reiter, Roman Baburske, Hartmut Pröbstle, Josef Lutz
Medium Voltage Three-Level Converters for the Grid Connection of a Multi-MW Wind Turbine ........................................................................3842
Osman S. Senturk, Lars Helle, Stig Munk-Nielsen, Pedro Rodriguez, Remus Teodorescu
Comparison of Different Fault-Tolerant Control Strategies for Seven-Phase Induction Motor Drives ..........................................................................3850
FPGA-Based Sensorless Controller for Synchronous Machine Using an Extended Kalman Filter .............................................................................3859
L. Ihkajime, E. Monmasson, A. Maulouf
Real Time Grid Congestion Management in Presence of High Penetration of Wind Energy ........................................................................3869
