2009 Second International Conference on Intelligent Computation Technology and Automation

(ICICTA 2009)

Zhangjiajie, China
10 – 11 October 2009

Volume 1
Pages 1-480
Session 1: Neural Networks

A Delay Decomposition Approach to Stability of Linear Neutral Systems with Mixed Delays ................................................................................................................... 3

Duyu Liu, Shouming Zhong, and Xiaomei Wang

A Joint Evolutionary Method Based on Neural Network for Feature Selection ........................................ 7

Biying Zhang

A Multi-Coding GA-BP-RBF Model for China Human Capital Prediction ............................................. 11

Shiwei Yu, Kejun Zhu, and Ting Liu

A New Early Stopping Algorithm for Improving Neural Network Generalization ........................................... 15

Xing-xing Wu and Jin-guo Liu

A New Improved BP Neural Network Algorithm .................................................................................. 19

Li Xiaoyuan, Qi Bin, and Wang Lu

A New Supervised Spiking Neural Network ...................................................................................... 23

Zhang Chunwei and Liu Haijiang
A Novel Generalized Predictive Control Algorithm with Online Tuning
Maximal Output Increment Based on BP Neural Network ..........................................................27
   Xialai Wu, Aiping Yang, and Wenzhan Dai
A Reinforcement Learning Algorithm Based Neural Network Used for Course
Angle Control of Remotely Operated Vehicle ..................................................................31
   Yan-zeng Gao, Jia-wei Ye, Ping-an Shi, and Xin Song
A Speed Control System of Permanent Magnet Linear Synchronous Motor
Using Neuron Adaptive Controller ....................................................................................35
   Wang Wei, Wang YuHua, and Wang ShiRong
Application of BP Neural Network in the Control of Hydraulic Die Forging
Hammer ...............................................................................................................................39
   Li Yan, Li Jianwei, and Liu Jun
Application of BP Neural Network for Wind Turbines .......................................................42
   Zuoxia Xing, Qinwei Li, Xianbin Su, and Hengyi Guo
Application of Neural Network Ensemble in Nonlinear Time-Serials Forecasts .................45
   Sijun Peng and Siru Zhu
Application of Sensitivity Pruning Neural Networks in Surface Roughness
Prediction ..........................................................................................................................48
   Wang Wu, Zhang Yuan-min, and Wang Hong-ling
Application of Unascertained Method and Neural Networks to Quality
Assessment of Construction Project .................................................................................52
   Huawang Shi
Application Research of Neural Network in Zigbee Locating System of Mine .....................56
   Zhang Qinghui and Yin Hui
Approximation Capability of a Novel Neural Network Model for Dynamic
Systems ............................................................................................................................59
   Jianhai Zhang, WanZeng Kong, Senlin Zhang, and Meiqin Liu
BP Neural Network with Error Feedback Input Research and Application .........................63
   Dingsheng Wan, Yuting Hu, and Xiang Ren
China Human Capital Prediction Based on the PCA-BP Artificial Neural
Networks ...........................................................................................................................67
   Ting Liu, Kefun Zhu, and Shiwei Yu
Exploring of Related Issues of BP Algorithm in Load Forecasting ....................................71
   Wei Liu
MMSE Controller Design Based on RBF Neural Network .................................................75
   Jianli Yu, Zongwei Zhang, and Liang Xu
Model of Online Grain Moisture Test System Based on Improved BP Neural
Network ...........................................................................................................................79
   Jishun Jiang and Hua Ji
Neural Network Model on Basin Flood Prevention Effect Assessment ..............................83
   Yingchun Shi, yangqi Zheng, and Mao Li
Neural Network PID Control System for the FTGS .................................................................87
   Jiang Chang and Yan Peng

PID Ramp Controller Regulated by Fuzzy RBF Neural Network ........................................91
   Tao Jiang and Xinrong Liang

Self-Tuning PID Controller Based on Improved BP Neural Network .........................................95
   Kan Jiangming and Liu Jinhao

Short Term Public Transit Dispatch Model Using State Space Neural Networks ................................99
   Jin Gao, Wei Deng, and Yan-jie Ji

Study of the Safety Assessment Model of Coal Mine Based on BP Neural Network .....................103
   Yongjian Fan, Jianying Mai, and Yanguang Shen

The Application of BP Neural Network Principal Component Analysis in the Forecasting the Road Traffic Accident .............................................................107
   He Ming and Guo Xiucheng

The Design of Self-Adaptive Controller Based on Hopfield Neural Network ............................112
   Xu wen-shang and Chen shao-hua

The Recognition of Visual Evoked Potential Based on Wavelet Transformation and BP Neural Network .............................................................................................................117
   Lanlan Yu and Tianxing Meng

The Study of the Electric Power Harmonics Detecting Method Based on the Immune RBF Neural Network .................................................................................................121
   Fu Guangjie and Zhao Hailong

Session 2: Evolutionary Computing and Genetic Algorithms

A Kind of Negative Feedback ACO Algorithm Based on Minimum Distance Balance Factor ..........................................................127
   Wenzhan Dai, Xiaolu Shao, and Aiping Yang

A Novel Constraint-Handling Method Based on Evolutionary Algorithm ..................................130
   Ximing Liang, Wen Long, Haoyu Qn, and Shanchun Li

A Novel Unascertained C-Means Clustering with Application ....................................................134
   Huawang Shi

A Novel Uneven Clustering Algorithm Based on Ant Colony Optimization for Wireless Sensor Networks .................................................................................................138
   Rongbo Zhang and Jianfu Cao

An Approach to Aspect-Oriented Software Evolution Process Architecture ...............................144
   Zhitao Fu, Tong Li, and Yan Hu

An Efficient Guide Stars Classification Algorithm via Support Vector Machines ........................148
   Jing Sun, DeSheng Wen, and GuangRui Li
An Experimental Study of Similarity-Based Mating on a Weight-Based Multiobjective Immune Genetic Algorithm ................................................................. 153
Jiaquan Gao and Lei Fang

An Improved Ant Colony Algorithm for PID Parameters Optimization ......................................................... 157
Yibao Chen, Zhong Guo, and Jiaguang Liu

An Improved Weight-Based Multiobjective Genetic Algorithm and Its Application to Parallel Machine Scheduling ........................................................................... 161
Zhimin Fang

An Improving Procedure of the Numerical Solution Method for Interval Quadratic Programming ................................................................. 165
Wei Li

Attribute Reduction Algorithm Based on Genetic Algorithm ................................................................................. 169
Zhangyan Xu, Dongyuan Gu, and Bo Yang

Coordinated Ramp Control Based on Genetic Algorithm .................................................................................. 173
Tao Jiang and Xinrong Liang

Distribution Network Planning Based on Hybrid Algorithm ........................................................................... 177
Sheng Siqing, Wu Jing, Gao Nan, and Ma Zhigang

Emergency Relief Goods Multi-Mode Transportation Based on Genetic Algorithm ................................................................. 181
Lin Na and Li Zhi

Improved Particle Swarm Optimization Using Two Novel Parallel Inertia Weights ................................................................. 185
Huailiang Liu, Ruijuan Su, Ying Gao, and Ruoning Xu

Kinematic Calibration for Articulated Arm Coordinate Measuring Machines Base on Particle Swarm Optimization ........................................................................... 189
Guanbin Gao, Wen Wang, Keng Lin, and Zichen Chen

Research on Signal Control of Urban Intersection Based on Genetic Algorithms ................................................................. 193
Chen Qun

Study on Hybrid Genetic Algorithm for Multi-type Vehicles and Multi-depot Vehicle Routing Problem with Backhauls ........................................................................... 197
Ren Chunyu and Wang Xiaobo

The Genetic Algorithm on the Multiple-Depot Vehicle Routing Problem with Vehicle Sharing ........................................................................... 201
Xiong Hao and Yan Huili

The Identification of Unmanned Helicopter Based on Improved Evolutionary Strategy ........................................................................... 205
Guangwen Li, Qiuling Jia, and Jingping Shi
Session 3: Particle Swarm Optimization and Hybrid System

A Clustering Based Niching Particle Swarm Optimization for Locating Multiple Optimal Solutions ................................................................. 211  
  Minghui Zhou and Junnian Wang

A Complete Algorithm for Attribute Reduction in Rough Set Based on Particle Swarm Optimization .............................................................. 215  
  Yapeng Zhao

A Hybrid Particle Swarm Algorithm for Nonlinear Parameter Estimation ................................................................................................. 219  
  Shengyu Pei, Yongquan Zhou, and Qifang Luo

A New Particle Swarm Optimization Based on Grey Self-Linkage Analysis ............................................................................................ 223  
  Yibao Chen, Jiaguang Liu, Miao Zhou, and Zhong Guo

A New Strategy for Improving Particle Swarm Optimization ................................................................................................................. 228  
  Xixiang Yang and Weihua Zhang

A Novel Spatial Obstructed Distance Using Quantum-Behaved Particle Swarm Optimization ................................................................. 233  
  Xueping Zhang, Hong Yi, Dan Cao, Yawei Liu, and Tengfei Yang

An Improved Particle Swarm Optimization Algorithm and Application in Available Transfer Capability ..................................................... 237  
  Qing-ran Wang and Li-zi Zhang

An Improved Particle Swarm Optimization Algorithm with Immunity ....................................................................................................... 241  
  Jiao Wei and Liu Guang-bin

Combinational Seabed Terrain Matching Algorithm Basing on Probability Data Associate Filtering and Iterative Closest Contour Point ................................................................. 245  
  Jiang Fan, Wu Yi-meng, Zhang Zhen-shan, and Zhan Wu

Covariance Tracking via Geometric Particle Filtering ............................................................................................................................. 250  
  Guogang Wang, Yunpeng Liu, and Hongyan Shi

Cutting Parameter Optimization Based on Particle Swarm Optimization ................................................................................................ 255  
  Junmei Xi and Gaohua Liao

Design of Neural Network Gain Scheduling Flight Control Law Using a Modified PSO Algorithm Based on Immune Clone Principle ................................................................. 259  
  Yong Sun, Weiguo Zhang, Meng Zhang, and Dan Li

Design of Mutation Operator Based on Information Entropy .................................................................................................................... 264  
  Wang Zai jian

Dynamic Route Guidance Method Based on Particle Swarm Optimization Algorithm ................................................................................ 267  
  Chen Qun

Evaluation on Cultivation of Innovative Talents in Engineering Universities Based on PSO-SVM Algorithm ......................................................................................... 271  
  Xiumei Wang and Qiushi Du
Session 4: Artificial Life and Artificial Immune Systems

Application of MPSO-Based Neural Network Model in Chinese Word Segmentation ................................................................. 295
Xiaorong Cheng, Dong Wang, and Kun Xie

Applications of the Improved A* Algorithm for Route Planning ................................................................. 299
Hui Shi, Wen Cao, Shulong Zhu, and Baoshan Zhu

Artificial Neural Network's Application in Intelligent Prediction of Surface Settlement Induced by Foundation Pit Excavation ................................................................. 303
Yu Jun and Chen Haiming

Artificial Neural Network's Application in Intelligent Slop Stability Analysis ................................................................. 306
Chen Haiming, Zhou Shengquan, and Yu Jun

Definition Method of Danger Signal Based on Genetic Optimization ................................................................. 310
Li Gui-Feng and Fu Hai-Dong

Determination of Real Estate Price Based on Principal Component Analysis and Artificial Neural Networks ................................................................. 314
Huawang Shi

Distribution Network Fault Restoration Based on Improved Adaptive Genetic Algorithm ................................................................. 318
Sheng Siqing, Ma Zhigang, Wu Jing, and Gao Nan

Fuel Oil Price Forecasting Using Symbiotic Evolutionary Immune Clustering Neural Network ................................................................. 322
Xin Ma

Game Design of Self-Automation Based on Artificial Neural Nets and Genetic Algorithms ................................................................. 326
Hongbiao Li and Honggang Li

High-Solidifying Crude Oil Temperature Soft-Sensing Based on RBF Neural Network ................................................................. 330
Zhou Yilin and Guo Huanran
Hybrid Genetic Algorithm Applied to Wave Directional Spectrum Estimation
by Array ........................................................................................................................................334
  Zheng Wei, Zhang Dianlun, and Sun Dajun
Hybrid Genetic Algorithm Optimization of Vehicle Major Reducer .............................................339
  Song Yandong
Intelligent Optimization of the Structure of the Large Section Highway Tunnel ..........................342
  Si-Mayuzhou, Jia-Xiaofeng, and Wang-Xiaorui
Intelligent Vibration Signal Diagnostic System Using Artificial Neural Network ............................346
  Chang-Ching Lin and Shien-Chii Shieh
Intrusion Prevention System Base on Immune Vaccination .................................................................350
  Yaping Jiang and Junlin Chang
Macro Prediction Model of Road Traffic Accident Based on Neural Network and Genetic Algorithm ........................................................................................................354
  Qin Liyan and Shao Chunfu
Modular Outsourcing: Pattern and Selection ..................................................................................358
  Peng Ben-hong and Zong Qi
Multi-Object Optimal Design of Analog Filter Based on Improved Genetic Algorithm ..................362
  Xie Qinlan and Chen Hong
Natural Computation for the Traveling Salesman Problem .................................................................366
  Jing Zhang
Prediction of Railway Passenger Traffic Volume Based on Neural Tree Model ............................370
  Feng Qi, Xiyu Liu, and Yinghong Ma
Prediction of Traffic Flow Base on Neural Network .........................................................................374
  Xiaoying Li
Process Monitoring for Integration of SPC and APC Based on BP Neural Network .........................378
  Jianli Yu, Zongwei Zhang, and Liang Xu
Realization of GA-NN Blind Equalization Algorithm .................................................................382
  Hu Yong-sheng, Yang Ling-ling, and Li Jian-lei
Reconfiguration of Distribution Network Based on Improved Plant Growth Simulation Algorithm .................................................................................................................387
  Yu Yong-zhe, Huang Jia-dong, and Ren Jing
Research and Realization Based on Linux Cluster's Parallel Computing ................................392
  Wang HaiTao and Jia ZongPu
Research of Blended Coal Model Based on Genetic Algorithm and Support Vector Machine ................396
  Yan-bin Cui and Qu-shi Du
Research of Key Technologies of the CACMOIT Model Based on Neural Network ........................................................................................................................................................................400
Research on Hybrid-Genetic Algorithm for MAS Based Job-Shop Dynamic Scheduling ........................................................................................................................................................................404
  Qingsong Li and Liming Du
Safety Evaluation of Traffic Accident Scene Based on Artificial Neural Network ........................................................................................................................................................................408
  Zhang Wenhui, Li Shengqin, and Wu Biao
Study on Immune Clonal Algorithm and Its Application ........................................................................................................................................................................411
  Jia Ma, Yunlong Zhu, and Yimin Shou
Study on the Optimization Model of Utilization Scheme of Railway Passenger Station Tracks Based on an Improved ACO Algorithm ........................................................................................................................................415
  Chen Dingjun, Ni Shaoquan, Li Chengbing, and Liu Bin
The Optimization Research on Large-Diameter Longhole Blasting Parameters of Underground Mine Based on Artificial Neural Network ........................................................................................................................................419
  Pan Dong, Zhou Keping, Li Na, Deng Hongwei, Li Kui, and Jiang Fuliang
Using Artificial Neural Network Model on Studying Fiber Diameter of Spunbonding Nonwovens: Comparison with Mathematical Empirical Statistical Method Model ........................................................................................................................................423
  Zhao Bo
Weight Self-Learning Based Combination Forecasting of Product Diffusion ........................................................................................................................................................................427
  Kai-Ping Ma and Hongwei Ma

Session 5: Intelligent System Design and Application

Application of Grey Theory on Intelligent Evaluation of Aggregate Segregation of Asphalt Concrete ........................................................................................................................................................................435
  Jia Xiaoyang and Zhu Di
Operation Pattern Recognition and Control for Hydraulic Accumulator Type Braking Energy Regeneration System of Bus ........................................................................................................................................................................439
  Jinyu Qu and Xiaodong Zhang
Pitch Accent Prediction Using Ensemble Machine Learning ........................................................................................................................................................................444
  Aiying Zhang and Chongjia Ni
Platoon Dispersion Prediction Based on Transformation Kernel Estimate ........................................................................................................................................................................448
  Bowen Gong, Zhaosheng Yang, and Ciyun Lin
Research of Genetic Algorithm in the Medical Logistics Distribution Routing Optimization ........................................................................................................................................................................452
  Zhang Jin and Fei Teng
Research on CBR-Based Hybrid Intelligent System's Application in Equipment Intelligent Maintenance ........................................................................................................................................................................456
  Chunjiang Yao, Xiaohu Chen, Xuping Wang, and Yongtao Zhou
Research on Intelligent Sorting System Based on Machine Vision .................................................. 460
   Yao Zhi-Ying, Wu Yue, and Wang Cheng-lin
Research on Ontology Integration Combined with Machine Learning ............................................. 464
   Li Zhu, Qing Yang, and Wei Chen
Research on Suspension System Based on Genetic Algorithm and Neural Network Control ................................................................. 468
   Chuan yin Tang, Guang yao Zhao, Hua Li, and Shu wen Zhou
Robust Design Optimization with Mixed-Discrete Variables Based on Ant Algorithm and Support Vector Machine ................................................................. 472
   Ren Pishun, Han Huixian, and Guo Huixin
Study on Line Selection of Grounded Fault in Non-effectively Earthed System Based on Wavelet Packet and Chaotic Neural Networks ................................................................. 476
   Wang Nian-bin, Wang Yan-wen, Gao Yan, and Long Fei
The Application of Rough Set Neural Networks of GSS-PSO in the Risk Evaluation of Collapse and Rockfall Disasters ................................................................. 481
   Yong Liu, Hongming Yu, and Ping Zhong
The Application of Support Vector Machines in the Automatic Eye Position Algorithm ................................................................. 485
   Wang Xueguang and Du Xiaowei
The Design of Intelligent Security Defensive Software Based on Autonomic Computing ................................................................. 489
   Liuqing Shen, Jindong Wang, Kun Wang, and Hengwei Zhang

Session 6: Image and Signal Processing

A Method of Mixed Gas Infrared Spectrum Analysis Based on SVM Data Fusion Model ................................................................. 495
   Bai Peng, Yu Daguang, Ling Aifan, and Li Yan
A New Approach to Hand Vein Image Enhancement ................................................................. 499
   Jianjun Zhao, Hogliang Tian, Weixing Xu, and Xin Li
A New Method for Ellipse Fitting in Satellite Images ................................................................. 502
   Youngsung Soh, Jongwoo Bae, Daewon Kim, and Heejun Kim
A New Resampling Strategy about Particle Filter Algorithm Applied in Monte Carlo Framework ................................................................. 507
   Gang Wu and Zhenmin Tang
A Predator-Prey System with Impulsive Effect ................................................................. 511
   Lingshu Wang and Guanghui Feng
A Survey of 3D Head Model Retrieval ................................................................. 515
   Boyong Gao and Sanyuan Zhang
Adaptive Extended Kalman Filter Based on Genetic Algorithm for Tightly-Coupled Integrated Inertial and GPS Navigation ................................................................. 520
   Han Lu, Jing Zhan-rong, Wei Ming-ming, and Zhang Li-xin
An Adaptive Digital Audio Watermarking Algorithm Based on HAS and Chaos Theory ................................................................. 525
Yanling Zhao, Xiaoshi Zheng, and Na Li
An Efficient Close Frequent Pattern Mining Algorithm ........................................................................................................... 528
Jun Tan, Yingyong Bu, and Bo Yang
An Estimation Temperature by Analysis of Transient Heating of a Slab in Reheating Furnace ..................................................... 532
Zenghuan Liu and Likong Li
An Image Encryption Algorithm Based on Two Dimensional Baker Map .................................................................................. 536
Yu Honglei, Wu Guang-shou, Wand Ting, Li Diantao, Yang Jun, Mu Weitao, Feng Yu, Yi Shaolei, and Mu Yuankao
An Improved Algorithm for Waveform Scheduling ..................................................................................................................... 541
Bin Wang, Jinkuan Wang, Xin Song, Yinghua Han, and Li Liu
Analysis and Processing Shock Acceleration Signal Based on EMD .......................................................................................... 545
Ming Li, Mingjie Liu, and Li Bai
Analysis the Chorma Data of Spray Target Image Based-Fractal ....................................................................................... 549
Zhang Fajun and Zhang Minsong
Capacitive Silicon Micro-accelerometer's Noise Reduction Technology Research ...................................................................................... 553
Wang Ling, Li Yan, and Wang Dong
Chebyshev Design of Complex FIR Filters with Equality-and-Inequality Constraints in Frequency Domain ............................................ 557
Ruijie Zhao and Xiaoping Lai
Coal Gangue Image Identification and Classification with Wavelet Transform ........................................................................ 562
Xian-Min Ma
Color Image Similarity Measurement and Its Application in Matching ............................................................................................ 566
Liu Fanjun, Cao Binggang, Wang Junping, and Zhou Kai
Data Preprocessing Method of ECG Indicators When Applied ECG in Driver Mental Workload Research ......................................................... 569
Xie Xiaoli, Hu Jiangbi, Liu Xiaoming, Wang Shuyun, and Li Pingsheng
Data Processing and Analysis of Solar Energy Hot Water Monitor System ............................................................................. 573
Xufei, Hao Ai-hong, Zhang Xiao-li, and Lian Xiaoqin
Deinterlacing Digital Images by Selective Use of Equi-Displacement Optical Flows ............................................................................. 578
Jaechoon Chon, Hyongsuk Kim, and Chun-Shin Lin
Design and Realization of 2.45GHz Active RFID System ........................................................................................................... 582
Yanpeng Sun, Yuan Zhang, and Peng Peng
Detection and Tracking of Multiple Targets Based on Video Processing ...................................................................................... 586
Yuanyuan Ren, Xiansheng Li, Hongyu Hu, and Jianfeng Xi
Extracting Acoustical Impulse Signal of Faulty Bearing Using Blind Deconvolution Method ................................................................. 590
    Yu Wang, Yilin Chi, Xing Wu, and Chang Liu

Extracting Features from Point Set Model ................................................................ 595
    Xu-Fang Pang and Ming-Yong Pang

Filtering Image Spam Using Image Semantics and Near-Duplicate Detection .......... 600
    Zhaoyang Qu and Yingjin Zhang

Gabor Feature-Based Face Recognition Using Median MSD ....................................... 604
    Liu Min

Gabor-2DLDA: Face Recognition Using Gabor Features and 2D Linear Discriminant Analysis ................................................................. 608
    Xiao-ming Wang, Chang Huang, and Jin-gao Liu

Image Segmentation Based on Modified Particle Swarm Optimization and Fuzzy C-Means Clustering ......................................................... 611
    Zhou Xian-cheng

Implementation of Haar Transform with PDDA Architecture for Flexible Scales ........ 617
    Zhu Bo, Shi Rong, and Wan Qun

Implementation of the Dahlin Digital Controller by IIR Network Method .................... 621
    Xia Hong and Xia Tao

Improved bwmporph Function in the MATLAB Image Processing Toolbox for Fast Computation of Repeated Morphological Dilations and Erosions ..................................................... 625
    Meihua Bao, Siyu Guo, Yaonan Wang, and Qiu Tang

Machine Vision Based Image Analysis for the Estimation of Pear External Quality ...................... 629
    Yanru Zhao, Dongsheng Wang, and Dongping Qian

Matched Correlation Algorithm of Penetration Acceleration Signal Processing Based on Gabor Transform .................................................... 633
    Wang Shihu, Liu Mingjie, and Li Xiaofeng

Medical Image Segmentation Based on GVF Snake Model ........................................ 637
    Wu Bingrong, Xie Mei, Li Guo, and Gao Jingjing

Method of Estimating Angle-of-Attack and Sideslip Angel Based on Data Fusion ........ 641
    Hao Long and Shujie Song

Nonspecific Speech Recognition Based on HMM/LVQ Hybrid Network ................. 645
    Liang Shuling, Wang Chaoli, and Du Jiaming

Orthogonal Discriminant Neighborhood Preserving Projections for Face Recognition .......................................................... 649
    Guoqiang Wang and Xiaojing Hou

Qualitative Spatial Representation and Reasoning in 3D Space .............................. 653
    Canlin Li, Jiajie Lu, Chao Yin, and Lizhuang Ma

Session 7: Advance Control Theory and Engineering

180-Degree Commutation System of Permanent Magnet Brushless DC Motor Drive Based on Speed and Current Control ........................................................................................................723
Boyang Hu, Swamidoss Sathiakumar, and Yash Shrivastava

A Global Synchronization Criterion for the Chaotic Rotational Machine Systems under Linear State Error Feedback Control .................................................................................................727
Qian Li, Xiaofeng Wu, and Zhifang Gui

A Study on the Velocity Ratio Control of the Tractor Continuously Variable Transmission .................................................................................................................................731
Zhili Zhou, Qingmei Cao, Liyou Xu, and Mingzhu Zhang

Adaptive Dynamic Terminal Sliding Mode Control Method .................................................................................................................................................................................................735
Guo Shuai and He Jinbao

An Optimal Control Method for Expressways Entering Ramps Metering Based on Q-Learning ........................................................................................................................................739
Xiaofeng Ji and Zenghui He

Application of Computer-Aided Quality Control System .................................................................................................................................................................................................742
Tao Yu and Gaoshan Wang

Applying Simple Adaptive Control to Magnetic Levitation System .................................................................................................................................................................746
Shiqi An, Yuju Ma, and Zhanjiang Cao

Attitude and Vibration Control in Nonlinear Flexible Spacecraft via Trajectory Shaping and Adaptive Sliding Control ........................................................................................................................................750
Yanhua Chen

Augmented State Pole-Placement for Networked Control System with Time-Delay ........................................................................................................................................754
Wang Zhiwen, Guo Ge, and Luo Dongsong

Automatic Control Research on Water Curtain System of Underground Water Seal Oil Cavern ........................................................................................................................................758
Liu Cheng and Xiong Xiaobo

Decoupling of Nonlinear Control Systems on Hermite Manifold .................................................................................................................................................................762
Xingmin Ji

Delay-Range-Dependent $H_{\infty}$ Control for Stochastic Systems with Time Delay ........................................................................................................................................766
Yizhong Wang

Design and Implementation of Control System for Platform Sinking Hoists ........................................................................................................................................770
Wang Ying, Zhu Zhencai, Zhou Gongbo, and Zhang Aijun

Design and Realization of a Control System for CMMB Transmitter .................................................................................................................................................................774
Hongshe Dang, Feili Qiang, and Xin Fang

Design of Control System of the Dial Gauge Automatic Test System ........................................................................................................................................778
Yang Musheng, Zhang Yu, and Wang Huilin
Dynamic Nonlinear Control for Electro-optical Tracking System ................................................... 782
  Ma Dongxi and Fan Dapeng
Exponential Stability of a Classic Networked Control Systems with Variable
and Bounded Delay Based on Impulsive Control Theory ................................................................. 785
  Li Tongtao, Li Lixiong, and Fei Minrui
Generalized Predictive Control for pi-Type Tudder Anti-pitching Based
on Nonlinear Adaptive Intelligent Model ......................................................................................... 790
  Hongli Chen, Wenyan Liu, and Xiaodong Gai
High Pressure Control in Synthetic Experimental System of Gas Hydrates
Simulation ........................................................................................................................................... 794
  Fulong Ning, Ling Zhang, Guosheng Jiang, Bing Li, and Jian’an Guan
Intelligent Control Technology for the Deep Drawing of Sheet Metal ............................................. 797
  Yang Song and Xu Li
Iterative Learning Control for Nonlinear Systems Based on New Updated
Newton Methods ................................................................................................................................. 802
  Jingli Kang and Wansheng Tang
Model Predictive Control Based on Improved DBD Algorithm
and Application of Electrode Control in EAF ..................................................................................... 806
  Wang Zheng and Ma Xianmin
Model Predictive Control for MIMO System Based on LSSVM and Mutative
Scale Chaos Optimization ................................................................................................................... 810
  Ximing Liang, Gang Yan, Shanchun Li, Zuqiang Long, Xiang Li, and Wen Long
Multi-Sequence Memory with Controllable Steady-State Period ..................................................... 814
  Min Xia, Jian’an Fang, and Yang Tang
New Iterative Learning Control Algorithm Based on Homotopy Extension
Method for Nonlinear Systems ............................................................................................................ 818
  Jingli Kang
Observer Design for a Class of Nonlinear Descriptor Systems ......................................................... 822
  Jianyong Li, Yanhong Liu, and Chunwen Li
Preview Control of an Active Vehicle Suspension System Based on
a Four-Degree-of-Freedom Half-Car Model ..................................................................................... 826
  Li Yan and Liu Shaojun
Ramped CP-2FSK Modulator Design in UAV Multi-target Data Link .............................................. 831
  Sun Wenyou
Reliable Robust Guaranteed Cost Control of Delta Operator Linear Uncertain
Systems with Sensor Failure .................................................................................................................. 834
  Xiao Mingqing
Research of an Unattended Intelligentized Control System of Air Compressor
for Supplying Constant-Pressure Air .................................................................................................. 838
  He Fengyou, Bao Weining, Zhang Bing, and Tang Yang
Research on Control Strategy for Regenerative Braking of a Plug-In Hybrid Electric City Public Bus .......................................................... 842
   Li Yu-shan, Zeng Qing-liang, Wang Cheng-long, and Wang Liang

Research on Effectiveness about SAI Control ........................................................................ 846

A State Space Model to Infer Interwell Connectivity Only From Injection and Production Data in Waterfloods .......................................................... 949
  Li Shanchun and Liang Ximing

Author Index - Volume 1
Session 8: Modeling and Simulation

An HLA Based Design of Collision Simulation System for Large-Scale LEO Objects ...........................................................................................................................................................................3
  Yinghua Li, Yong Li, Ying Yang, and Xingtao Ge
An Optimization Model on the Radiation Area of the International Inland Port ..........................................................7
  Changzheng Zhu, Guoshun Zhang, and Qianli Dong
Application of New Information Multi-Variable Grey Model NMGM(1,n) to the Load-Strain Relation ..........................................................11
  Zheming He and Youxin Luo
Computer Simulation of Grout Flowing in Intermittent Fractured Network ..........................................................15
  Shuan-cheng Gu and Pei-li Su
Consensus Analysis of a 2-Dimensional KH Model with Various Confidence Level Sets ..........................................................19
  Shuang Zhang and Zhendong Sun
Development of Auto-Modeling Program Based on ADAMS Marcos for Aircraft Landing Gear Dynamic Loads Simulation Analysis ..........................................................23
  Hou Chi, Wan Xiaopeng, and Zhao Meiyng
Dynamic Change in Landscape Pattern of Shen-Fu Connection Area Based on Markov Model .................................................................27
Wei Wang, Jinghai Zhu, Weiling Liu, and Miao Liu
Dynamic Simulation for Crank-Connecting Rod Mechanism of Mud Pump Based on Virtual Prototyping Technology ........................................31
Zhiwei Tong, Fengxia Zhu, and Hao Liu
Dynamic Simulation on the Belt Conveyor on Emergency Braking .................................................................34
Xi Pingyuan and Song Yandong
Entropy-Based Combining Prediction of Grey Time Series and Its Application ......................................................37
Yue Chen and Yuhong Li
Fatigue Load Vehicles Model of City Bridges ......................................................................................................................41
Zhu Hong-bing and Yu Zhi-wu
Force Feedback Rendering with Material Removal Rate in Virtual Clay Modeling .................................................................45
Fengxin Yan, Zengxuan Hou, Dinghua Zhang, Wengke Kang, and Wei Du
Forecasting Intermittent Demand Based on Grey Theory ......................................................................................49
Zhang Jianfeng and Lv Biyu
Fractal-Based Lunar Terrain Surface Modeling for the Soft Landing Navigation .................................................................53
Xianlin Huang, Xiaonan Jiang, Ting Yu, and Hang Yin
Full Parameter Error Identification Model and Calibration of Continuous 3R Oblique Axis Non-Spherical Wrist ...........................................................................57
Zhanchong Wang, Chaoying Liu, Yanjun Han, Wenwu Guo, Mingzhu Xu, and Linzhang Cheng
Hybrid Model of Continuous Hidden Markov Model and Multi-Layer Perceptron in Speech Recognition .................................................................62
Peiling Zhang and Hui Li
Initial Contour Automatic Selection of Geometric Active Contour Model ...........................................................................66
Hongshe Dang, Ying Hong, Xin Fang, and Feili Qiang
Kinematics Model and Control Strategy of Adaptive Front Lighting System ...........................................................................70
Hui Rong, Jinfeng Gong, and Wulin Wang
Kinematics Simulation of Air Splicer Shearing Mechanism Based on ADAMS ...........................................................................75
Degong Chang, Heng Li, Hao Chen, and Zhijuan Xiao
Lagrange Fuzzy Interpolating Controlling and Simulation on Semi-Active Suspension of Vehicle .................................................................78
Cheng Wang and Shanzhen Xu
Location Model of Collector Based on the Variational Inequalities ...........................................................................82
Zhou Ruohong and Li Zhao-kun
Modeling and Analysis of Integrated Logistics Park Based Automod Simulation Platform ...........................................................................86
Ma Chenglin, Mao Haitun, Li Xuhong, and Shan Wensi
Modeling and Analysis of UML-Based Teacher-student Intercommunion Platform

Dongjun Xin and Yingchun Shi

Modeling and Optimization Strategy for Heterogeneous Catalysis Based on Support Vector Regression and Genetic Algorithm

Han Xiaoxia, Xie Jun, Ren Jun, and Xie Keming

Modeling Household Car Ownership by Decision Rules

Weijie Wang, Wei Wang, and Gang Ren

Modeling Method and Application of Full Scope Non-Linear Simulation

Experimental Mathematic Model

Han Zhong-xu, Yan Cui-hui, and Sun Ying

Modeling with Euler-Lagrang Equation and Cybernetical Analysis for a Unicycle Robot

Xiaogang Ruan, Jingmin Hu, and Qiyuan Wang

Modelling and Active Safe Control of Heavy Tractor Semi-Trailer

Zhu Tianjun and Zong Changfu

Monte Carlo Simulation of Recrystallization with a New Mesoscopic Stored Energy Distribution Model

Lijun Wang, Xiaojun Guan, Baojun Yu, Xiaomin Shen, Qingkai Zeng, and Jian Zhao

New Information Grey Multi-Variable Optimizing Model

NMGM(1,n,q,r)&nbsp;&nbsp;for the Relationship of Cost and Variability

Youxin Luo and Weiyue Xiao

Nonlinear Inverse Modeling of Synchronous Generator Based on Improved Resource Allocating Networks

Fumin Ma, Tengfei Zhang, and Weijie Niu

Numerical Simulating of Layered Buried Embankment Based on PLAXIS

XianBing Gong and Jian Zhao

Numerical Simulation and Experimental Investigation of Steam Separators

Xiao Li-chun, Ding Zhi-jiang, Li Qiang, Yang Jing-fei, and Shen Ya-qin

Numerical Simulation of a Multi-Class LWR Traffic Flow Model

Jianzhong Chen, Zhongke Shi, and Yanmei Hu

Numerical Simulation on Weld Joint Offset for Tailor-Welded Blank in Multi-Point Forming

Wei Liu and Mingzhe Li

Operation Planning Modeling of Tracking and Data Relay Satellite: A Sketch

Cheng Si-Wei, Zhang Hui, Wang Chao, Chen Jing, and Zhou Jun-Sheng

Parameter Estimation of Logit Route Choice Model with Unified Parameter

Ouyang Jun, Li Jun, and Cai Min

Preliminary Plan of Numerical Simulations of Three Dimensional Flow-Field in Street Canyons

Tian Sheng, Liang Zhi-yong, and Zhang Gen-hao

Zhang Xin

Experimental Study on the Measured Materials Normalized Eddy Current Sensor .......................................450

Tian Xinqi, Chen Huxun, and Gao Wei

Intelligent Sensorless Control of Permanent Magnet Synchronous Motor Drive ........................................454

Yuan Xiao-ling and Wang Hong-hua

Research on Optimal Sensor Placement Using Effective Two-Step Arrangement Approach ....................458

Ziyan Wu, Haifeng Yang, and Yunju Yan

Soft-Sensor Modeling on NOx Emission of Power Station Boilers Based on Least Squares Support Vector Machines .................................................................462

Feng Lei-hua, Gui Wei-hua, and Yang Feng

Study of an Ultrahigh-Sensitivity Coupling Fiber-Optic Strain Sensor ......................................................467

Jian Xu, Bin Ma, and Xin-guo Zhou
Study on Errors Correction of Infrared Methane Sensor Based on Support Vector Machines

Li Zhang, Rulin Wang, and KuiKui Liu

The Research and Realization of Vehicle Detection System Based on Wireless Magneto-Resistive Sensor

Cai Bai-gen, ShangGuan Wei, Wang Jian, and Chen Rui

Session 12: Fault Diagnosis and Vibration Analysis

A Fault Diagnosis Method Combining Rough Sets and Neural Network

Yang Jie

An Adaptive UKF Algorithm for Process Fault Prognostics

Yuping Cao and Xuemin Tian

Application of Comprehensive Correlation Degree Analysis in Power Transformer Fault Diagnosis

Lieping Zhang and Qinzhou Niu

Application of PNN to Fault Diagnosis of IC Engine

Du Danfeng, Ma Yan, and Guo Xiurong

Fault Diagnosis of Turbine Based on Data-Driven

Wei Liao, Feng Li, and Pu Han

Dynamic Characteristic of the Drive Train of DFIG Wind Turbines during Grid Faults

Yao Xingjia, Liang Lizhe, and Xing Zuoxia

Estimation of Reliability with Hybrid Uncertainties in the Unified Framework of Random Set Theory

Huixin Guo, Zhunfeng Xia, Lie Chen, and Xiaobin Pang

Fault Diagnosis for Diesel Engines Based on Discrete Hidden Markov Model

Jia-shan Huang and Pingjun Zhang

Fault Diagnosis of Engine Based on Supervision of Data-Driven

Feng Li, Zheng Mu, and Wei Liao

Fault Diagnosis of Engine Based on Wavelet Packet and RBF Neural Network

Wei Liao, Shuyou Gao, and Yi Liu

Fault Diagnosis of Fan Based on Fuzzy Neural Expert System

Lu Xiaobo and Li Jianping

Fault Diagnosis of Turbine Generator Vibration Based on Supervision of Data-Driven

Zhentao Wang, Nan Wang, and Wang Huan

Fault Pattern Recognition of Bearing Based on Principal Components Analysis and Support Vector Machine

Lu Shuang and Yu Fujin
Fault Tolerant Control of Networked Control System with Delay in Forward and Feedback Channels ................................................................. 537
  
  Yu Qiang-Chen, Guo Lin-Sun, Wei-Lu, Zhi Yan-Xu, and Qi Lin-Liu

Feature Analysis of Oil-Film Instability Fault Based on Time-Frequency Methods in Rotor Systems ................................................................. 541
  
  Hui Ma, Wei Sun, Zhaohui Ren, and Bangchun Wen

Investigation of Rolling Bearing Fault Diagnosis Based on Multi-Fractal and General Fractal Dimension .......................................................... 545
  
  Meng Li, Wenxing Ma, and Xiujuan Liu

Large Rotating Machinery Fault Diagnosis and Knowledge Rules Acquiring Based on Improved RIPPER ............................................................... 549
  
  Sun Jianghong and Xu Xiaoli

Motor Fault Diagnosis Based on Wavelet Neural Network ................................................................. 553
  
  Xu Li Ying and Wan Nan Lan

Reliability Growth Evaluation New Method for Gompertz Model Based on Bayesian Theory ................................................................. 556
  
  Mao Zhao-yong and Song Bao-wei

Reliability Modeling and Analysis of Safety-Critical Manufacture System ................................................................. 560
  
  Qing Sun, Lirong Cui, Gong Chen, and Rong Pan

Reliability of Emergency Rescue System on Highway ................................................................. 564
  
  Dianliang Xiao and Yu-jia Tian

Reliable Multicast Mechanism Based on Application Layer Active Network ................................................................. 568
  
  Xu Qixing, Zhan Ziao, and Yu Zhenwei

Research of Sensor Fault Diagnosis Method Based on Immune Network and Fuzzy ART Neural Network ................................................................. 572
  
  Jihai Gu, Ye Tian, and Xiangyang Jin

The Design of Fault Diagnosis Expert System about Temperature Adjustment System Based on CLIPS ................................................................. 576
  
  Zhang Qiang and Jiang Yi

Wind Turbine Gearbox Fault Diagnosis Using Adaptive Morlet Wavelet Spectrum ................................................................. 580
  
  Xingjia Yao, Changchun Guo, Mingfang Zhong, Yan Li, Guangkun Shan, and Yanan Zhang

Session 13: Rough Set and Data Mining

3D Body Point Cloud Data Denoising and Registration ................................................................. 587
  
  Xiaozhi Li and Xiaojiu Li

An Approximate Attribute Reduction of Rough Set and Its Algorithm ................................................................. 591
  
  Shen Jinbiao, Lv Yuejin, and Tao Duo-xiu

A Data Mining Approach to Topic-Specific Web Resource Discovery ................................................................. 595
  
  Lei Xiang and Xin Meng
Application of Data Mining Method Based on Rough Set Theory in Cement Decomposing Furnace ........................................................... 600
   Shouning Qu, Jing Liu, Yanbo Xue, and Bo Wu

Extraction Fault Rule of Rotation Equipment Based on Rough Set ........................................ 604
   Li Meng, Shu Yunxing, Mao Jiandong, and Li Xiaohua

Performance Analysis of Networked Control System Based on Rough Set Theory .............................................................. 608
   JiHua Wang, Ling Dong, and Yan Bai

Research on Privacy-Preserving Technology of Data Mining ..................................................... 612
   Yanguang Shen, Junrui Han, and Hui Shao

Research on Process Quality Data Collection and Control Based on Computer Technology ................................................................. 615
   Liu Hai-ying

Research on the Application of Data Mining in Software Testing and Defects Analysis ........................................................ 619
   Yanguang Shen and Jie Liu

Risk Rules Mining of Information System Based on Variable Precision Rough Set ......................................................... 622
   Xiaorong Cheng, Xin Geng, Huilan Zhao, and Mingquan Zhang

Rough Law Separation-Reduction Based on Function S-Rough Sets .............................................. 626
   Huang Shunliang, Gao Houli, and Wu Meixiang

**Session 14: Fuzzy Systems and Application**

A Fast Algorithm for Fuzzy Clustering Problem .................................................................................. 633
   Zhang Feng, Wuqin Zhang, and Renguq Qiang

A Minimax Distribution Free Procedure for Fuzzy Mixed Periodic Review Inventory Models .................................................................................................................................................. 637
   Hu Jin-Song and Zheng Hui

A Multi-Level Gray and Fuzzy Comprehensive Evaluation of Road Traffic Safety Management Facilities .................................................................................................................................................. 641
   Wang Wanqiu and Fang Shouen

A Multi-Objectivities Fuzzy Programming Model in Expressway Planning ............................................. 645
   Lu Huapu, Yu Xinlin, Li Yue, Zhao Xiaqiang, and Shi Ye

Analysis of Time Distribution in Traffic Accident Based on Fuzzy Assessment Method .................................................................................................................................................. 649
   He Song-bai, Wei Ai-guo, Yu Dian-xiang, Tan Zhong, and Wang Peng

Appliance of Fuzzy Membership Conversion on Supply Chain Competitiveness .................................................................................................................................................. 652
   Fuming Liu, Feng Wang, and Yunfeng Song
Application of Fuzzy Neural Networks Based on Genetic Algorithms in Integrated Navigation System ................................................................. 656
   Jianjuan Liu

Application of Fuzzy Pattern Recognition on Fingerprint Processing ................................................................. 660
   Li Yuan

Automatic Generation Fuzzy Neural Network Speed Controller for Permanent-Magnet Synchronous Motor Drive ................................................................. 664
   Guo Zhi-rong, Gao Wei, and Xie Shun-zi

Based on Fuzzy Control of Ore Smelting Electric Arc Furnace Electrode Regulator System ................................................................. 668
   Wang Yuhua

Comprehensive Evaluation for Product Quality Generalized Based on Fuzzy Analytic Hierarchy Process ................................................................. 672
   Yazhe Chen, Yang Liu, Ting Liu, and Bangchun Wen

Comprehensive Fuzzy Evaluation for Power Transmission Network Planning Based on Entropy Weight Method ................................................................. 676
   Dang Ke, Lv Pan, and Zhang Hui-ming

Continuous Selection and Fixed Point Theorems for Fuzzy Mappings in General Topological Spaces ................................................................. 681
   Haishu Lu

Design and Test on Fuzzy Neural Network of Constant Deceleration ................................................................. 685
   Lei Yongtao, Yang Zhaojian, and Liu Jinrong

Design of Predictive Fuzzy-PID Controller on Flow Control in Real-Time Multimedia Communication ................................................................. 689
   Qi Hong-yan and Xu Jie

Development of a Integrated Map Matching Algorithm Based on Fuzzy Theory ................................................................. 693
   Guo Li mei and Luo Da yong

Development of Membership Degree Functions of the Car-Following Models Based on Fuzzy Logic ................................................................. 697
   Xiong Qipeng

Expressway Management Risk Evaluation Based on Fuzzy Neural Networks ................................................................. 700
   Zhu Wenxi and Cao Danyang

Fuzzy Availability Based on Affine Arithmetic and Markov Process ................................................................. 704
   Yu Min, He Zhengyou, and Qian Qingquan

Fuzzy Comprehensive Evaluation and Analytical Hierarchy Process Applied in Balance Score Card ................................................................. 708
   Jinting Yang and Yinghui Liu

Session 15: Manufacturing Automation

An Improved Molecular Dynamics Algorithm for Large Scale Simulation in Nano-Engineering 

*Tang Yulan and Chen Jiaxuan*

Analysis of Coupling Effects on Hydraulic Controlled 6 Degrees of Freedom Parallel Manipulator Using Joint Space Inverse Mass Matrix

*Peter Ogbobe, Jiang Hongzhou, He Jingfeng, Yang Chifu, and Han Junwei*

Design of the Low Density Mixture Liquid Control System Based on Iterative Learning Control Theory

*Ma Hai-hai*

Design of Virtual Terminal for Agriculture Machinery Based on ISO11783

*Zhang Mingzhu, Zhou Zhili, and Xi Zhiqiang*

Influences of Processing Parameters on Microstructure and Properties of Laser Direct Deposited Stainless Steel Components

*Kai Zhang and Weijun Liu*

Internal Ballistic Calculation and Test Study on Spinning Solid Rocket Motor

*Heng Xue, Chunlan Jiang, and Zaicheng Wang*

Master Model Driven Process and Fixture Collaborative Design for Aeroengine Blade Manufacturing

*Chen Bing, Wang Mingwei, Ji Jun, and Zhang Shasha*

Nonlinear Compensation Algorithm for Eliminating Low Speed Stick-Slip in Servo System

*Wengang Ji, Li Lin, and Fengyan Dai*

Observability of Simple Mechanical Control Systems

*Ji Xing-min*

Reliability Analysis of Hydraulic System for Type Crane Based on Go Methodology

*Heqing Li and Qing Tan*

Research of a Novel Integral Stereolithography System for Microstructures

*Xu Guangshen, Hu Songqiao, Pan Huan, Jin Jing, Luo Sheng, and Qiu Ronghua*

Research of Dynamic Generation for Terrain and Dredging Cutter

*He Kun-jin and Ni Fu-sheng*

Research of Speed Ratio Matching Strategies of Hydro-Mechanical Continuously Variable Transmission System for Tractor

*Liyou Xu, Zhili Zhou, Fuyi Cao, and Mingzhu Zhang*

Research on Analyse and Compensation Approach Aimed at CNC Machine Geometrical and Kinematic Errors

*Guoyong Zhao*
Research on Conceptual Design Automation of Mechanical Products - Based on Functional Mode ................................................................. 897

Peigang Li, Xianying Feng, Shu-chun Zhao, and Kezheng Huang

Research on Face Fluid Field and Seal Performance of T-shape Groove Dry Gas Seal ............................................................................................................. 902

Zhu Weibing, Wang Heshun, Zhou Shengren, and Chen Xiuqin

Research on Position Controller of CNC Machine ........................................ 907

Guoyong Zhao, Yagang Zhao, Haiyun Zhang, Zhongwen Sima, and Lili Zhang

Research on the Lubrication of the Typical Automobile Drawing Process ................................................................. 911

Qingwen Qu, Cheng Wang, and Minghu Yin

Research on the Numerical Method of Nonlinear Rigidness/Flexibility Coupling Dynamics Equations of Flexible-Joint Flexible-Link Space Manipulator ................................................................................................................................. 915

Jia Qing-xuan, Chu Ming, and Sun Han-xu

Research on the Technology of Shearer Self-Adaptive Memory Cutting ............................................................................................................. 920

Wang Zhongbin and Xu Zhipeng

Sensing Characteristics of Magnetic Shape Memory Materials .......................... 924

Jun Lu, Wanchun Qu, and Chen Wang

Study on Lightweight Optimization of Car Body Based on Crash .................. 928

Sun Hongtu, Shen Guozhe, Hu Ping, Liu Bo, and Zhou Dinglu

Study on Scheduling Problem of Agriculture Vehicles Based on Queuing Theory ................................................................................................. 932

Dezhong Huang and Jibao Shen

Study on Semi-Active Suspension System Simulation Based on Magnetorheological Damper ................................................................. 936

Liu Haibo and Yang Jianwei

The Effect of Technological Parameters of Sequential-Valve-Injection Molding on Weld Line Position Control ................................................................. 940

Zujun Zhang and Feng Ruan

The Elastic-Plastic Deformation Analysis on Cylinder of Different Modulus in Tension and Compression ............................................................................................................. 944

Yang Zhao and Xiong Xiaobo

The Non-Relativistic Limit of Radiation Hydrodynamics Equations Arising from Astrophysics ................................................................. 948

Jianwei Yang and Shu Wang

Thermo-Elasto-Hydrodynamic Lubrication Performances of Oil-Film Bearings in Large-Scale Rolling Mill ................................................................. 951

Jianmei Wang and Qingxue Hang

Virtual Experiment System for Material Mechanical Performance Testing Based on VB and VRML ............................................................................................................. 955

Jiali Tang and Fangsheng Wu
Session 16: Electric Automation

A Novel Single-Phase Power Factor Corrector with One Cycle Control
Technology ......................................................................................................................................................961

Housheng Zhang and Tianxing Meng

Multi-Objective Optimization Design of Vehicle Clutch Diaphragm Spring .................................................................194

Wu Yong-hai

Multi-Objective Optimization Design of Vehicle Transmission System Based on Pareto Optimal Theory .............................198

Fan Qin-man

Multi-Objective Optimization of Helico-Axial Multiphase Pump Impeller Based on NSGA-II ...........................................................................202

Zhu Hongwu, Zhang Jinya, Li Yan, and Yang Chun

Optimal Design on Diaphragm Spring of Automobile Clutch ......................................................................................206

Xiaoli Guo and Huaimin Lu

Optimal Image Watermark Using Genetic Algorithm and Synergetic Neural Network ..............................................................................209

Chen Yongqiand Peng Lihua
Optimal Regional Bus Timetables Using Improved Genetic Algorithm .......................................................... 213
Yang Hairong and Luo Dayong

Optimising of Micro Electroforming Ni-Fe Alloy Process for Microstructure .................................................... 217
Xiaohu Zheng and Yuanwei Liu

Optimization Design for Multi-Echelon Logistics Network in Remanufacturing System .................................... 221
Yapeng Zhao

Optimization of Capacitor Switching in Distribution Network Based on Improved Genetic Algorithm ................ 225
Sheng Siqing, Gao Nan, Ma Zhigang, and Wu Jing

Optimization of Continuous Berth and Quay Crane Allocation Problem in Seaport Container Terminal ............ 229
Li Na and Jin Zhihong

Optimization on Safety Thickness of Roof for Mining Based on Genetic Algorithm ........................................... 234
Xiuzhi Shi and Feng Gao

Optimization on the Network Distribution for Town Public Transit Network ....................................................... 238
Zhi Wang, Dian-liang Xiao, and Yu-jia Tian

Optimizing Dynamic Logistics Allocation on Improved Ant Colony Algorithm .................................................. 242
Li Na and Wang Shoubin

Optimum Design of Ackerman Steering Trapezium Based on ADAMS ............................................................. 245
Hou Zhongming, Yao Kai, Wang Shengjun, Xin Tao, and Gao Yong

Optimum Distribution of Aseismic Engineering Investment for Gas Pipeline Network System Based on Improved Particle Swarm Algorithm ................................................................. 249
Liu Wu, Liu Yi, Gu Xue-qin, and Wang Deng-hai

Parameters Optimization Design for the 4-PTT Parallel Robot Mechanism Based on Workspace and Dexterity ......... 253
Haizhen Chen, Zhongyue Zou, and Hongpeng Song

Radiator Performance Optimization Based on Application of Thermoelectric Generation .................................... 257
Xiao-Jun Liu

Real-Time Globally Optimized Path Planning in a Dynamic Environment ............................................................ 261
Qingquan Wu and Bi Zeng

Research on an Optimization Method of Ethernet-Based Real-Time Communication of CNC System .................... 265
Tao Lin, Jiang Ting-biao, and Zhang Xiang-li

Research on Optimization Method for Underground Cavern Excavation ........................................................... 269
Kang Bian and Ming Xiao

Research on Optimization Model of Initial Schedule of Passenger Trains Based on Improved Genetic Algorithm .......... 273
Ni Shaoquan, Chen Dingjun, and Lv Miaomiao
Research on Optimized Combined Cosine Windows with Maximum Side Lobe Decay for Harmonic Analysis ................................................................. 277
    Shenxi Huang, Xiaoping Fan, Shaoqiang Liu, and Shengyue Yang

Schedule Optimization for NC Resource Sharing Based-on Greed Algorithm and Tabu Search ............................................................................. 282
    Ling He, Luo Yabo, and Lu Hong

Study on Logistic Path Optimization of Coal Based on Flow Efficiency .......................................................... 286
    Li Ying-de

Session 19: Mechanical Structure Optimization and Design

A GAOC Method for Topology Optimization Design .................................................................................. 293
    Zhimin Chen, Liang Gao, Haobo Qiu, and Xinyu Shao

A New Weighted Average Method and It's Applications in Finite Element Method .................................................. 297
    Liu Rongchang, Chen Lidong, Feng Lizhen, and Ma Shuying

An Optimal Design Method for Fillet Rolling .......................................................................................... 302
    Liu Rongchang, Wu Yu, Chen Lidong, and Ma Shuying

CAD System for Plastic Profile Extrusion Die Based on UG ................................................................ 305
    Junmei Xi and Gaohua Liao

Calculate the Elastic Deformation of the Multileaf Foil Journal Bearings by Finite Element Method .................. 309
    Qingwen Qu, Minghu Yin, and Cheng Wang

Design and Analysis of Vehicle Energy Absorption Structure with Hydraulic Pressure ...................................... 313
    Jiang Fan, Liu Xiaochu, Wang Yijun, and Zhang Chunliang

Design and Implementation of Modern Design Platform for Mechanical Products ........................................... 317
    Ding Hua, Duan Lei, Yang Zhaojian, Wang Xuewen, and Wang Yiliang

Design of Bayberry Harvest Manipulator with Single-Mast Frame Structure ................................................ 323
    Shuzhen Liu and Yubao Zhang

Finite Element Analysis of ZL50 Loader Stamp-Welding Axle Housing ......................................................... 326
    Guanglin Shi, Langni Deng, and Haibo Wang

Finite Element Analysis of Vibration of Concrete Beam Reinforced with Fiber Composite Laminates ................. 329
    Wang Man and Bai Ruixiang

Finite Element Analysis on Temperature Field of Insulated Cabin for LNG Carrier Based on ANSYS ................. 333
    Zhou Ming-shun, Li Bo-yang, and Zhang Yun-qi

Finite Element Analysis on the Construction of Ultra-Large Steel Suspension Box Cofferdam and Study on Structural Optimization ........................................... 337
    Wu Jia yun and Xu Wei
Finite Element Simulation of Cutting Temperature Field during High Speed Machining Hardened Steel Based on ABAQUS ................................................................. Chunzheng Duan, Yujun Cai, Yuanyuan Li, and Minjie Wang .................................................................341

Joint Stiffness Analysis of Sheared Bolt with Preload ........................................................................345 Yongjie Zhang and Qin Sun

Preprocessing Technology to Weld Line for Tailored Blank Laser Welding ........................................349 Junyi Wang and Zhigang Xu

Study on Design the Stop Pipe Diameter of Packaging Viscous Fluid ..................................................353 Yang Fu-xin and Wang Sheng-ze

The Structural Optimization of Gearbox Based on Sequential Quadratic Programming Method ................................................................. Huang Wei, Fu Lingling, Liu Xinhuai, Wen Zongyi, and Zhao Leisheng ..................................................356

The Structure Optimization of the Siphonic Bedpan’s Flow Channel Based on the Numerical Simulation Technology ................................................................. Ge Zhenghao, Wang Jinchui, Su Pengang, and Liang Jiangbo .................................................................360

Web Based Man-Machine Collaborative Equipment Monitoring Architecture ........................................364 Ren Weihong and Pan Zhiyong

Session 20: Intelligent Mechatronics and Robotics

A Fast Calculation Algorithm for the Envelope Surface in Multi-Axis NC Machining ................................................................. Ruifeng Guo, Shimin Zhang, Jianjun Peng, Zhixiang Shao, Zhenzhen Shi, and Wanfu Ding .................................................................371

A Novel High Rigid 2-DOF Parallel Translating Robot ........................................................................375 Binbin Peng, Liangbin Zeng, Yu Sun, and Xiaogang Chen

A Novel Stability Proof of Robot Manipulators by PD-IPD Regulators ..................................................380 Bai-shun Liu and Zhi-Peng Chen

A Precision and Stable Servo System for Microscale Machine Tool in Hard Materials Processing ........................................................................384 Meng Li, Xiujuan Liu, and Ping Zhao

A Set of Globally Stable Output Feedback N-PID Regulators for Robotic Manipulators ..........................388 Bai-shun Liu and Zhi-Peng Chen

An Improvement of D* Algorithm for Mobile Robot Path Planning in Partial Unknown Environment ........................................................................394 Jianming Guo, Liang Liu, Qing Liu, and Yongyu Qu

Automatic Teaching of Welding Robot for 3-Dimensional Seam Based on Ant Colony Optimization Algorithm ........................................................................398 Li He-xi, Shi Yong-hua, Wang Guo-rong, and Zheng Xiao-xi

Design of a Large Explosive Ordnance Disposal Robot ......................................................................403 Boyu Wei, Junyao Gao, Jianguo Zhu, and Kejie Li
Session 21: Traffic Information and Control

A Bus-Following Model for Preventing Service Unreliability on a Circular Bus Route ................................................................. 425
  Weiya Chen and Zhiya Chen

A Clustering-Based Approach for Discovering Interesting Places in a Single Trajectory ........................................................................ 429
  Zhao Xiu-Li and Xu Wei-Xiang

A Model for Urban Distribution System under Disruptions of Vehicle Travel Time Delay ............................................................................. 433
  Zheng Wang and Jia Shi

A New Algorithms for Dynamic Traffic Information Collection ............................................................................................................. 437
  Ding Ke-liang and Wang Hai-tao

A New Measure for Traffic Data Collection and Processing .................................................................................................................. 440
  Baichuan Lu and Meiling Huang

A Novel Modified FBLSA Algorithm for Symmetric and Asymmetric Traffic Equilibrium Problem .......................................................... 444
  Aihua Luo, Chongchao Huang, and Xizhen Hu

A Research on Time Distribution of Traffic Accidents on Road ................................................................................................................ 448
  Dan Yu, Jiajia Li, Haitao Chen, and Xiaomei Yi

A Study on Reaction Time Distribution of Group Drivers at Car-Following ......................................................................................... 452
  Yihu Wu, Huihua Yuan, Haitao Chen, and Jiajia Li

A Study on the Prediction Technology of Urban Road Intersection Congestion ....................................................................................... 456
  Chen Xiaodong, Yang Zhaosheng, and Feng Jingqiao

A Vehicle-following Model Based on Drivers Different Sensitive to Vehicle Speed and Vehicle's Spacing ................................................................. 460
  Yihu Wu, Jixiang Xie, Dan Yu, and Zhixiang Hou

Adaptability Analysis about Traffic Capacity's Calculation Methods at Signal Intersections ........................................................................... 464
  Cheng Yingwei, Wang Fu, and He Xiaoming

Building Logistics Cost Forecast Based on Improved Simulated Annealing Neural Network .................................................................914
  Jingwen Tian and Meijuan Gao
Design of Early Warning Indicator System of Enterprise Logistics Risk Based on Supply Chain Management .......................................................... 918  
Liu Yongsheng and Ji Li

Dynamic Alliance Research of Supply Chain Node Enterprise Based on E-Business .................................................................................. 924  
Jia Li Mei, Shi Xiaoming, and Liu Fuxing

Empirical Study on the Relationship between China’s Logistics Industry and the Oil Consumption Based on ECM .............................................. 927  
Xiaofei Yan

How to Figure Out the Logistics Cost of the Joint Distribution ........................................................................................................... 931  
Cheng Yaorong, Xie Haiman, and Chen Yue

Method for Supplier Selection Based on ANP and Entropy Right ........................................................................................................... 935  
Cui Li-li, Zhang Rui-peng, and Wang Peng

Model of Cluster Green Supply Chain Performance Evaluation Based on Circular Economy ................................................................. 941  
Xu Jun

On the Development of Shipbuilding Logistics in Shanghai ........................................................................................................... 945  
Huang Shunquan, Yu Siqin, and Yin Yue

Operational Risk Control Mechanism and Decision-Making Model for Third Party Logistics ........................................................................... 950  
Shen Wen and Wang Guoxian

Reaction-Diffusion Mechanism in a Production-Inventory System for Deteriorating Items ........................................................................ 954  
Li Xu and Zhen-Yu Zhao

Reputation Model of Supply Chain Based on the Game of Catering Enterprises and Customers ........................................................................ 956  
Guo Wei-jie, Qi Huan, and Guo Qiu-jun

Research on a SM_Based Information Sharing Model in a Supply Chain ................................................................................................ 959  
Yaping Miao

Research on Intelligent Management of Collaborative Relation in Agricultural Products Logistics ........................................................................ 963  
Yao Xinheng, Cui Yan, Xu Guangyin, Fan Shasha, and Wei Jiaoguang

Research on Measurement of Supply Chain Synergy ......................................................................................................................... 967  
Lu Shan and Fu-hua Huang

Research on Self-Constructed Traceability System Based on Agri-Food Supply Chain Management ........................................................................ 972  
Shouping Gui, Fei Wang, Zhiyong Zhang, and Lei Yang

Research on Supplier Selection Based on Recessive Purchasing Cost and Entropy Weight - Grey Relational Analysis ................................................. 976  
Wu Dengfeng, Liu Qunfang, and Wang Qin
Research on the Choice of Logistics Distribution Center Based on the Scale Economy Theory......................................................................................................................................................980
   Yu Yan and Sun Huimin

Static Scheduling Model and Algorithms of Agile Supply Chain Under Definite Demands ....................................................................................................................................................984
   Wang Jianhua, Li Nan, and Guo Hui

Study on a Combined Supply Chain Contracts of Target Rebate and Quantity Discount ....................................................................................................................................................................988
   Tiezhu Zhang and Longying Li

Study on the Site Selection Model of Logistics Distribution Center under Supply Chain Management .........................................................................................................................................................................993
   Zheng Changjiang and Shen Jinxing

Supply Chain Contract Designing with Moral Hazard Based on Screening Model .........................................................................................................................................................................................997
   Weimin Ma and Chao Li

Supply Chain Purchasing Risk Evaluation of Manufacturing Enterprise Based on Fuzzy-AHP Method ..........................................................................................................................................................1001
   Jiang Nan, Huo Jia-Zhen, and Liu Hao-Hua

The Application Proposal of Green Supply Chain Management in Construction Industry ..............................................................................................................................................................................................1006
   Zhu Mingqiang and He yabo

The Impact of Land Use and Traffic Resources Supply on Commute Mode Choice .......................................................................................................................................................................................1010
   Xia Wan, Jun Chen, and Mengyu Zheng

The Logistics System Evaluation Based on Fuzzy Analytic Hierarchy Process ..................................................................................................................................................................................................1014
   XianYong Gan and Wei Yu

The MCRS Model of Profit Distribution Considering Risk Factors in Apparel Supply Chain ..................................................................................................................................................................................................1017
   Jiu Xiaotao and Xu Qi

Type Selection & Quantity Optimization of Logistics Equipment in Logistics Park ..................................................................................................................................................................................................1021
   Cheng Yao-rong, Zhang Ming, and Liang Bo

Session 23: Agent Systems

Agent Cooperation Research Based on BP Neural Network ..................................................................................................................................................................................................1027
   Wang Ya-li, Tian Xi-ping, Tang Hui-feng, and Li Lu

Collaborative Purchasing Model Based on Multi-Agent ..................................................................................................................................................................................................1032
   Quan Liu and Liuqing Cai

Decision-Making of the Feedforward Control Agents ..................................................................................................................................................................................................1036
   Jiang Chang and Yan Peng
Public Transport Dispatch and Decision Support System Based on Multi-Agent

Zengzhen He and Qisen Zhang

Author Index - Volume 3
Table of Contents
Volume - 4

Preface - Volume 4
Organizing Committee - Volume 4
Program Committee - Volume 4
Reviewers - Volume 4

Session 23: Agent Systems

Research on Collaborative Design Based on Web Services and Agent Technology ........................................................................................................................................................................3
    Gao Zhen-qing and Cheng Guang-yao
    Shuyun Jia and Jiang Chang
Supply and Demand Conflict in Supply Chain Based on Principal-Agent Theory ........................................................................................................................................................................11
    Jiang Jiyun and Chen Hu
The Research Based on Multi-Agent for the Pattern of the Intelligent Manufacture ........................................................................................................................................................................15
    Qu Jubao and Liu Sheng
The Reward-Based Negotiation Model on Agent's Honesty and Capability ........................................................................................................................................................................18
    Guorui Jiang, Sheng Chen, and Fengling Xie
Session 24: Network Technology and Communication

A Programmable Multi-Format Video Decoder .................................................................25
Jongwoo Bae, Youngsung Soh, Daewon Kim, and Myungho Lee

A Serial and Parallel Scheduling Algorithm for Mobile P2P Streaming Media System .................................................................29
Xie Man-de

Advanced FEC Algorithm of Video Transmission Control over the Internet ......................33
Hui Yin, Fengjuan Cheng, and Dexian Zhang

An Effective Real-Time Error Concealment Scheme for Video Codec .................................................................37
Wei Sun and Haoshan Shi

An Empirical Study of DV-Hop Localization Algorithm in Random Sensor Networks .................................................................41
Lingfei Wu, Max Q.-H. Meng, Zhenzhong Dong, and Huawei Liang

Application of Communication Optimization Strategy Based on Cascade PLC MODBUS in Fire Water System of Hydropower Station .................................................................45
Feng Lei-hua, Gui Wei-hua, and Yang Feng

Cryptanalysis and Improvement of a Remote User Authentication Scheme ..........................49
Ou Qingyu, Huang Kai, and Li Guang

DDCFS: A Distributed Dynamic Computer Forensic System Based on Network .................................................................53
Liang Hu, Kuo Tang, Guangkun Shi, Nurbol, and Kuo Zhao

Design and Implementation of Channel Estimation and Equalization of Indoor Positioning System Based on UWB .................................................................57
Xu Jinsong, Lu Xiaochun, Wu Haitao, Bian Yujing, Bai Yan, Wang Chaogang, and Wang Jing

Design and Implementation of the Ground Source Heat Pump Remote Monitoring System .................................................................62
Ma Ya-qiang, Zhang Xiao-li, Lian Xiao-qin, and Duan Zhen-gang

Design of Wireless Sensor Networks Node in Coalmine .................................................................66
Feng Tian and Xiaowu Xu

Feature Selection Based on AdaBoost in Video Surveillance System .................................................................70
Bin Tian, Xiaoshi Zheng, Rangyong Zhang, and Yanling Zhao

Geomagnetism GPS SINS Integrated Navigation Based on an Improved Square-Root UKF .................................................................73
Xianlin Huang, Mingming Li, Haidong Hu, and Hongqian Lu

Networked Motion Control System Design Based on EtherCAT .................................................................77
Junyan Qi and Lei Wang

Petri Nets Based Scheduling Modeling for Embedded Systems .................................................................80
Haitao Zhang and Guifang Wu
Remote Control Laboratory Based On LabVIEW .......................................................... 84
   Li Pengfei and Nie Luhua
Remote Diagnosis and Control Expert System for Citrus Agricultural Diseases and Insect Pests Based on BP Neural Network and WebGIS ......................................................... 88
   Xiao Laisheng, Wang Zhengxia, Peng Xiaohong, Wu Min, and Yu Guangzhou
Research of Water Resources Remote Monitor & Control System Based on GPRS ................................................................................................................................. 94
   Yu Han and Jia Guo
Sampling and Transmitting Intervals Optimization Based on GPS Equipped Floating Car ..................................................................................................................... 97
   Zhang Wei, Chang Ande, and Jiang Guiyuan
Switched State Feedback Controller for Networked Control System with Disturbance .............................................................................................................. 101
   JiHua Wang, Ling Dong, and Yan Bai
System Optimization-Based Model and Algorithm of Network Flow Assignment of Transport Hub ............................................................................................................ 105
   Xuemei Zhou, Xianzhun Zhang, and Chunchun Tian
The Research of Smart Antenna Technique for McWiLL Broadband Wireless Communication System ......................................................................................................... 109
   Dongsheng Wang and Yanru Zhao
Unblocked Reliability Analysis of Urban Communication Network Systems Considering Failure-Dependence ...................................................................................... 113
   Hu qi guo, Zhang Peng, and Yang Xueyun
Using Known Base Vector Length as Quasi-Observation to Improve GPS Ambiguity Resolution ........................................................................................................ 117
   Liu Lilong, Jin Lihong, and Wen Hongyan
Wireless Communication Management Model of Workshop and Warehouse Manufacturing System ........................................................................................................ 121
   Yisheng Zhang and Min Li

**Session 25: Knowledge Management and Knowledge Engineering**

A Model for University Counselor's Competence Evaluation Based on Information Entropy and Unascertained Measure ................................................................. 127
   Ren RongRong and Xing Gang
A Model for University Teaching Teacher's Competence Evaluation Based on Grey Relational Analysis and Harmony Factor ........................................................................ 130
   Ren RongRong and Xing Gang
A Study of Knowledge Management's Functions in E-Commerce Implementation .................................................................................................................. 134
   Zhu Mingqiang and He Yabo
An Analysis of the Discovery and Elimination Algorithm in the P2P Environment .......................................................... 138

Jinqing Cai, Zhiqiang Li, and Xiuli Shao

An Expert System Based on Spatial Data Mining Used Decision Tree for Agriculture Land Grading ........................................ 142

Zelu Jia

Base on the Factorial Appraisement and Contrast of China Rural Area Living Standard ................................................................ 146

Zhang Dehua and Che Mingcheng

Characteristic Pattern Study of Coronary Heart Disease with Qi-yin Deficiency Syndrome Based on Decision Tree .................................... 150

Huihui Zhao, Jianxin Chen, Na Hou, Qin Hou, Peng Zhang, Jing Han, Qi Ge Qi, Yong Wang, Juan Wang, and Wei Wang

Coal Enterprises Merger and Acquisition Risk Prediction Based on Support Vector Machine .................................................. 154

Chen Xiang, Cai Weihua, and Xiao Ming

Comparative Study on the Double-Array Structure for Large English & Chinese Lexicons .............................................................. 158

Shuo Xu, Li-Jun Zhu, and Xiao-Dong Qiao

Comparison of Iterative IOM Approaches for Optimization of Biological Systems under Uncertainty .................................................. 163

Gongxian Xu

Credit Risk Measurement of Chinese Listed Corporations Based on the KMV Model ................................................................ 168

Jingdi Wang, Dongsheng Zhou, Bailong Wang, and Xiaoling Feng

Decision Making Method Based on Interval AHP and DEA ........................................................................................................ 172

Yang Hong, Chen Rong, and Liu Ya-qing

Decision-Making for Supplier Selection Based on Ontology and Rules ...................................................................................... 176

Lu Yiqing, Liu Lu, and Li Chen

Design Method of Eigenvalue Assignment based on Standard Characteristic Polynomial ................................................................ 180

Li Aijun, Xu Lina, Meng Wenjie, and Wang Changqing

Design of Spatial Database in City Foundation Information Consultant System Based on Mapinfo .................................................. 184

Rongxia Wang, Chunyuan Liu, Gang Zheng, and Xiaolu Li

Dynamic Decision-Making for Port Berth Allocation .................................................................................................................. 188

Ning Meng, Yan Chen, and Lin He

Efficient Attribute Reduction Algorithm Based on Incomplete Decision Table ........................................................................ 192

Qingguo Zhang, Xuefeng Zheng, and Zhangyan Xu
