Keynote Speech: Manish Parashar - Volume 1

Volume 1: The 12th IEEE International Conference on Computational Science and Engineering (CSE 2009)

Advanced Networking and Applications

Performance Modelling and Analysis of Integrated WLANs and Internet-Access Mesh Networks ......................................................... 1

Geyong Min, Yulei Wu, and Laurence T. Yang

A Trade-Off Approach to Optimal Resource Allocation Algorithm with Cache Technology in Ubiquitous Computing Environment .......................................................... 9

Mianxiong Dong, Long Zheng, Kaoru Ota, Song Guo, Minyi Guo, and Li Li

Self-Tuning the Parameter of Adaptive Non-linear Sampling Method for Flow Statistics ........................................................................ 16

Chengchen Hu and Bin Liu
Mobile Computing and Wireless Communications

A Cognitive Approach to Achieve Fair Uplink and Downlink Utilities in Wireless Networks ...............................................................22
   Chiapin Wang and Kuehhsiang Liang

A Weighted-Dissimilarity-Based Anomaly Detection Method for Mobile Wireless Networks ..........................................................29
   Ihn-Han Bae and Stephan Olariu

A Novel Resource Management Scheme for Integrated Multiple Traffic Heterogeneous Systems .....................................................35
   Cheng Zhu, Qing-An Zeng, and Dharma Agrawal

A Safe RSS Approach for Securely Sharing Mobile SVG Biomedical Images for Web 2.0 .................................................................40
   Sabah Mohammed, Lyle F. Chamarette, Jinan Fiaidhi, and Sylvia Osborn

Database and Data Mining

Scalable APRIORI-Based Frequent Pattern Discovery ..................................................48
   Sean Chester, Ian Sandler, and Alex Thomo

Event-Driven Approach for Logic-Based Complex Event Processing ........................................56
   Darko Anicic, Paul Fodor, Roland Stühmer, and Nenad Stojanovic

Incremental Discovery of Sequential Patterns Using a Backward Mining Approach .................................................................64
   Ming-Yen Lin, Sue-Chen Hsueh, and Chih-Chen Chan

Cluster and Grid Computing I

Data Distribution Methods for Communication Localization in Multi-clusters with Heterogeneous Network ........................................71
   Shih-Chang Chen, Ching-Hsien Hsu, and Chun-Te Chiu

An Analytical Model of Communication Networks in Multi-cluster Systems in the Presence of Non-uniform Traffic ........................................79
   Hojjat Sharifi, Mohammad K. Akbari, and Bahman Javadi

Balanced and Efficient Data Placement and Replication Strategy for Distributed Backup Storage Systems ........................................87
   K. Renuga, S.S. Tan, Y.Q. Zhu, T.C. Low, and Y.H. Wang

Cluster and Grid Computing II

Improvement on Scheduling Dependent Tasks for Grid Applications ........................................95
   Elaine C. Machtans, Liria M. Sato, and Airton Deppman

Fault-Tolerance Scheduling by Using Rough Set Based Multi-checkpointing on Economic Grids ...................................................103
   Asgarali Bouyer, Abdul Hanan Abdullah, Hasan Ebrahimpour, and Firouz Nasrollahi
A Volunteer-Computing-Based Grid Environment for Connect6 Applications ........................................ 110
  I-Chen Wu, Chingping Chen, Ping-Hung Lin, Guo-Chan Huang, Lung-Ping Chen,  
  Der-Johng Sun, Yi-Chih Chan, and Hsin-Yun Tsou
Integration of Mobile Agents Technology and Globus for Assisted Design  
and Automated Development of Grid Services .................................................................................. 118
  Rocco Aversa, Beniamino Di Martino, and Salvatore Venticinque

Pervasive and Ubiquitous Computing

Improvement of Directed Diffusion Protocol Based on Data Aggregation ........................................ 126
  Chen Hui, Shi Yufeng, Wang Ye, Laurence T. Yang, and Xiong Naixue
  Kyung Tae Kim, Byung Jun Lee, Jae Hyun Choi, Bo Yle Jung, and Hee Yong Youn
Location-Based Adaptive Mobile Learning Research Framework and Topics ...................................... 140
  Qing Tan, Kinhuk, Yen-Hung Kuo, Yu-Lin Jeng, Po-Han Wu, Yueh-Min Huang,  
  Tzu-Chien Liu, and Maiga Chang

CSE Applications I

Stable Bayesian Parameter Estimation for Biological Dynamical Systems ........................................ 148
  Alberto Giovanni Busetto and Joachim M. Buhmann
On Performance Enhancement of Circuit Simulation Using Multithreaded Techniques ..................... 158
  Ruey-Kuen Perng, Tien-Hsiung Weng, and Kuan-Ching Li
A Software Architecture-Based Framework Supporting Suggestion of Medical Surveillance Level from Classification of Electronic Patient Records .................................................. 166
  Juliana T. Pollettini, Flávia P. Nicolas, Sylvia G. Panico, Julio C. Daneluzzi,  
  Renato Tinos, José A. Baranauskas, and Alessandra A. Macedo

Intelligent and Bio-inspired Computing

Robust Translational Motion of Single-Row SPCE by the Parallel Binocular .................................... 174
  Gwo-Long Lin
Mining Frequent Patterns with Gaps and One-Off Condition ......................................................... 180
  Yongming Huang, Xindong Wu, Xuegang Hu, Fei Xie, Jun Gao, and Gongqing Wu
An Evolutionary Approach for Multi-objective 3D Differentiated Sensor Network Deployment .......... 187
  Chih-Wei Kang and Jian-Hung Chen

Distributed and Parallel Computing I

Solving 0/1 Knapsack Problem for Light Communication SLA-Based Workflow Mapping Using CUDA ................................................................. 194
  Dang Minh Quan and Laurence T. Yang
A Coarse-Grain Parallel Genetic Algorithm for Flexible Job-Shop Scheduling
with Lot Streaming .................................................................201
   Fantahun M. Defersha and Mingyuan Chen
Parallel Computation of Nash Equilibria in N-Player Games ...........................................209
   Jonathan Widger and Daniel Grosu
An Efficient Dynamic Load Balancing Scheme for Multi-agent System
Reflecting Agent Workload ........................................................................................................216
   Yong Hee Kim, Seungwok Han, Chang Hun Lyu, and Hee Yong Youn

Distributed and Parallel Computing II
Efficient Broadcast on Area of Interest in Voronoi Overlays ..................................................224
   Michele Albano, Ranieri Baraglia, Matteo Mordacchini, and Laura Ricci
Hardware Supported Multicast in 2-D Mesh InfiniBand Networks ........................................232
   Jiazheng Zhou, Shen-En Liu, and Yeh-Ching Chung
Energy Consumption of Residential and Professional Switches ........................................240
   Helmut Hlavacs, Georges Da Costa, and Jean-Marc Pierson

Scientific and Engineering Computing
A Comparative Study of Blocking Storage Methods for Sparse Matrices
on Multicore Architectures ....................................................................................................247
   Vasileios Karakasis, Georgios Goumas, and Nectarios Koziris
MCD: Mesh Closure Detection for Localized Load Balancing in Scientific
Applications ..................................................................................................................................257
   Chonglei Mei, Ruipeng Li, Hai Jiang, and Jeff Jenness
Robust Optimization on Across-Chain Inventory Control of Cluster Supply
Chains ........................................................................................................................................LANG_028
   Jizi Li, Naixue Xiong, Chunling Liu, Linfu Sun, Ming Cao, and Shaohua Wan

CSE Applications II
VFT: An Ontology-Based Tool for Visualization and Formalization of Web
Service Composition ..................................................................................................................271
   Chao Ma, Yanxiang He, Naixue Xiong, and Laurence T. Yang
Parameter Identifiability and Optimal Experimental Design .................................................277
   Elias August
High Performance Printing: Increasing Personalized Documents Rendering
through PPML Jobs Profiling and Scheduling ........................................................................285
   Thiago Nunes, Mateus Raeder, Mariana Kolberg, Luiz Gustavo Fernandes,
   Alexis Cabeda, and Fabio Giannetti

Cluster and Grid Computing

A P2P Hierarchical Metascheduler to Obtain QoS in a Grid Economy Services ..................................................... 292
Maycon L.M. Peixoto, Marcos J. Santana, and Regina H.C. Santana

An Architecture for Integrating Databases with Replication Support Based on the OGSA-DAI Middleware ................................................................................................................................. 298
Mathias Brito, Fernando Kakugawa, Liria Sato, Pedro Correa, Luciano Ogiboski, and Rogerio Leis

Performance Comparison of Four-Socket Server Architecture on HPC Workload ................................................................................................................................. 306
Henry Kasim, Verdi March, and Simon See

Database and Data Mining

XML with Recursive Querying ........................................................................................................................................ 312
Kamal Taha and Ramez Elmasri

An Efficient High-Dimensional Indexing Scheme Using a Clustering Technique for Content-Based Retrieval .................................................................................................................. 318
Hyun-Jo Lee, Hyeong-Il Kim, and Jae-Woo Chang

IMBT--A Binary Tree for Efficient Support Counting of Incremental Data Mining .......................................................... 324
Chia-Han Yang and Don-Lin Yang

Optimization of Distributed SPARQL Queries Using Edmonds' Algorithm and Prim's Algorithm ................................................................. 330
Ben P. Vandervalk, E. Luke McCarthy, and Mark D. Wilkinson

Pervasive and Ubiquitous Computing

An Effective Data Gathering Scheme in Heterogeneous Energy Wireless Sensor Networks ......................................................... 338
Yingchi Mao, Zhen Liu, Lili Zhang, and Xiaofang Li

CA-MAC: Context Adaptive MAC Protocol for Wireless Sensor Networks .................................................................................. 344
Kyung Tae Kim, Won Jun Choi, Myung Jin Whang, and Hee Yong Youn

Spiral Grid Routing for Load Balance in Wireless Sensor Networks ......................................................................................... 350
Chiu-Kuo Liang and Chih-Shiuan Li

CSE Applications

SVM Based Hybrid Moment Features for Natural Scene Categorization .................................................................................. 356
Devendran V, Hemalatha Thiagarajan, and Amitabh Wahi

A Fast Backlight Module Luminance Inspection Method ................................................................................................................. 362
Wu-Ja Lin and Chih-Wei Ho
SOM-Based Hedge Ratio Estimation with Hierarchical Cluster Resampling .................................................. 368
Yu-Chia Hsu and An-Pin Chen

Development of Integrated Retrieval Methods for OpenAPIs and Mash-Up Capable Services .......................................................... 374
Seung-Jun Cha and Kyu-Chul Lee

Study on 3D Annotation in Virtual Space for Collaboration ............................................................................ 382
Eun-Joo Sin, Yoon-Chul Choy, and Soon-Bum Lim

Dependable and Secure Computing

Minesweeper for Sensor Networks--Making Event Detection in Sensor Networks Dependable .......................................................... 388
Karima B. Hein and Reinhold Weiss

An Evaluating Model for Anti-virus Ability Based on AHP ................................................................................. 394
Ming Liu, Lansheng Han, Mengsong Zou, and Qiwen Liu

Analysis of 2-State, 3-Neighborhood Cellular Automata Rules for Cryptographic Pseudorandom Number Generation ................................................................................................................................. 399
Sang-Ho Shin and Kee-Young Yoo

A New Security Mechanism to Perform Traffic Anonymity with Dummy Traffic Synthesis .......................................................... 405
Wazen M. Shbair, Ahmed R. Bashandy, and Samir I. Shaheen

Distributed and Parallel Computing

Implementation and Evaluation of Modular Neural Networks in a Multiple Processor System on Chip to Classify Electric Disturbance .............................................................................................................. 412
Danniel C. Lopes, Rafael M. Magalhães, Jorge D. Melo, and Adrião D. Dória Neto

A New Hierarchical Network Coordinate Algorithm Based on Community Structure .......................................................................................................................... 418
Zilong Ye, Yabing Liu, and Siguang Chen

Power Efficient Large Matrices Multiplication by Load Scheduling on Multi-core and GPU Platform with CUDA .......................................................................................................................... 424
DaQi Ren and Reiji Suda

A Design Methodology for Self-Management in Distributed Environments .......................................................................................... 430
Ahmad Al-Shishtawy, Vladimir Vlassov, Per Brand, and Seif Haridi

Scientific and Engineering Computing

Computer Simulation of the Anisotropy of Fluorescence in Ring Molecular Systems: Influence of Disorder and Ellipticity .......................................................................................................................... 437
Pavel Herman, David Zapletal, and Ivan Barvík

Flattened Conservative Parallel Simulator for DEVS and CELL-DEVS .................................................................................. 443
Shafagh Jafer and Gabriel Wainer

Supply Chain Design Model Based on Multi-supply Hubs .......................................................................................... 449
Jizi Li, Naixue Xiong, Linfu Sun, Aping Yuan, Jingyi Chen, and Ming Cao

Volume 2: The 7th IEEE/IFIP International Conference on Embedded and Ubiquitous Computing (EUC 2009)

Embedded Systems and HW/SW Codesign

On the Design of a Suitable Hardware Platform for Protocol Stack Processing in LTE Terminals

Sebastian Hessel, David Szczesny, Shadi Traboulsi, Attila Bilgic, and Josef Hausner

A Region-Based Allocation Approach for Page-Based Scratch-Pad Memory in Embedded Systems

Better Than Optimal: Fast Identification of Custom Instruction Candidates

J. Reddington, G. Gutin, A. Johnstone, E. Scott, and A. Yeo

Multimedia and Data Management

Fast Inter Mode Decision Algorithm Based on the MB Activity for MPEG-2 to H.264/AVC Transcoding

Xingang Liu, Wei Zhu, and Kook-Yeol Yoo

Dynamic Reconfigurable Shaders with Load Balancing for Embedded Graphics Processing

Yi-Chi Chen, Hui-Chin Yang, Chung-Ping Chung, and Wei-Ting Wang

Real Time Multiple Object Tracking Using Tracking Matrix

Fei Hao, Zhenjiang Miao, Ping Guo, and Zhan Xu
Visible and IR Data Fusion Technique Using the Contourlet Transform .........................................................42
Soad Ibrahim and Michael Wirth

Power-Aware Computing
Rotation Scheduling and Voltage Assignment to Minimize Energy for SoC .........................................................48
Meikang Qiu, Laurence T. Yang, and Edwin H.-M. Sha
Grouping-Based Dynamic Power Management for Multi-threaded Programs in Chip-Multiprocessors ...............................................................56
Mu-Kai Huang, J. Morris Chang, and Wei-Mei Chen
K-Stage Pipelined Bloom Filter for Packet Classification ..................................................................................64
Mahmood Ahmadi and Stephan Wong

Sensor Networks
A Two-Stage Bootloader to Support Multi-application Deployment and Switching in Wireless Sensor Networks ..........................................................................................................................71
Alan Marchiori and Qi Han
Residual Time Aware Forwarding for Randomly Duty-Cycled Wireless Sensor Networks ..............................................................79
Long Cheng, Canfeng Chen, Jian Ma, Lei Shu, Hongyang Chen, and Laurence T. Yang
The More Relay Nodes, the More Energy Efficient? .......................................................................................87
Ying Zhu and Qi Han
MALADY: A Machine Learning-Based Autonomous Decision-Making System for Sensor Networks ..................................................................................93
Sudha Krishnamurthy, Geethapriya Thamilarasu, and Christian Bauckhage
Design of an RFID Air Protocol Filtering Technique .......................................................................................101
Hyun-Sung Park and Jong-Deok Kim
Completely Distributed Low Duty Cycle Communication for Long-Living Sensor Networks .................................................................109
Marcin Brzozowski, Hendrik Salomon, and Peter Langendoerfer

Wireless Communications
Implementation of Rate Control in Distributed Wireless Multicast by Neural Network Prediction .................................................................117
Naixue Xiong, Laurence T. Yang, Yuanyuan Zeng, Ma Chao, and Jong Hyuk Park
Adaptive and Intelligent Route Learning for Mobile Assets Using Geo-tracking and Context Profiles ..................................................................................125
DineshBalakrishnan, Amiya Nayak, and Pulak Dhar
Control-Channel-Reuse-Based Multiple-Channel MAC (CRM-MAC) for Ad Hoc Networks ..................................................................................133
Divya Sardana and Qing-An Zeng
Middleware and P2P

Analysing BitTorrent’s Seeding Strategies ................................................................. 140
   Xinuo Chen and Stephen A. Jarvis

A Middleware for Controlling the Execution of Composite Services ............................. 150
   Xinfeng Ye and Yi Chen

2T-DHT: A Two Tier DHT for Implementing Publish/Subscribe ..................................... 158
   Mayank Pandey, Syed Mushtaq Ahmed, and Banshi Dhar Chaudhary

mBrace: Action-Based Performance Monitoring of Multi-tier Web Applications ............. 166
   Andrej van der Zee, Alexandre Courbot, and Tatsuo Nakajima

Embedded Software and Optimization I

Reducing Code Size by Graph Coloring Register Allocation and Assignment
Algorithm for Mixed-Width ISA Processor ...................................................................... 174
   Jyh-Shian Wang, I-Wei Wu, Yu-Sheng Chen, Jean Jyh-Jiun Shann, and Wei-Chung Hsu

Optimization of Component Connections for an Embedded Component
System .............................................................................................................................. 182
   Takuya Azumi, Hiroaki Takada, and Hiroshi Oyama

Improving Hybrid Flash-Disk Storage by Incorporating Sequential Pattern
Mining into Fully-Associative Sector Translation .......................................................... 189
   Un-Keun Yoon and Han-joon Kim

Pervasive and Ubiquitous Computing I

Distributed Agents Network for Ubiquitous Monitoring and Services
Exploitation ...................................................................................................................... 197
   Rocco Aversa, Beniamino Di artino, and Salvatore Venticinque

Extended Dempster-Shafer Theory in Context Reasoning for Ubiquitous
Computing Environments ............................................................................................... 205
   Daqiang Zhang, Jiaming Cao, Jingyu Zhou, and Minyi Guo

GUPSS: A Gateway-Based Ubiquitous Platform for Smart Space .................................. 213
   Tomomi Kawashima, Jianhua Ma, Runhe Huang, and Bernady O. Apduhan

Leveraging Computation Sharing and Parallel Processing in Location-Based
Services .......................................................................................................................... 221
   Jonathan Cazalas and Kien Hua

A Recommendation Framework towards Personalized Services in Intelligent
Museum ........................................................................................................................... 229
   Shandan Zhou, Xingshe Zhou, Zhiwen Yu, Kaibo Wang, Haipeng Wang, and Hongbo Ni
Dependable, Autonomic, Secure Computing

Finding the Needle: Suppression of False Alarms in Large Intrusion Detection Data Sets ...........................................................................................................................................................................................................................................237
  James J. Treinen and Ramakrishna Thurimella

Self-Adaptation of Fault Tolerance Requirements Using Contracts ...........................................................................................................................................................................................................................................245
  André Luiz B. Rodrigues, Leila N. Bezerra, Alexandre Sztajnberg, and Orlando Loques

Architectural Support for Automated Software Attack Detection, Recovery, and Prevention ...........................................................................................................................................................................................................................................254
  Jesse Sathre, Alex Baumgarten, and Joseph Zambreno

Real-Time and Cyber-Physical Systems

Swift Mode Changes in Memory Constrained Real-Time Systems ...........................................................................................................................................................................................................................................262
  Mike Holenderski, Reinder J. Bril, and Johan J. Lukkien

WCET Analysis of the mC/OS-II Real-Time Kernel ...........................................................................................................................................................................................................................................270
  Mingsong Lv, Nan Guan, Yi Zhang, Rui Chen, Qingxu Deng, Ge Yu, and Wang Yi

Real Time Rectification for Stereo Correspondence ...........................................................................................................................................................................................................................................277
  Khurram Jawed, John Morris, Tariq Khan, and Georgy Gimel'farb

Coordinated Runtime Adaptations in Cooperative Open Real-Time Systems ...........................................................................................................................................................................................................................................285
  Luís Nogueira, Luís Miguel Pinho, and Jorge Coelho

Avoiding Delay Jitter in Cyber-Physical Systems Using One Way Delay Variations Model ...........................................................................................................................................................................................................................................295
  Huthaifa Al-Omari, Francis Wolff, Christos Papachristou, and David McIntyre

Pervasive and Ubiquitous Computing II

Performance Analysis of an HMM-Based Gesture Recognition Using a Wristwatch Device ...........................................................................................................................................................................................................................................303
  Roman Amstutz, Oliver Amft, Brian French, Asim Smailagic, Dan Siewiorek, and Gerhard Tröster

Design and Implementation of WLAN-Based Automatic Vehicle Identification ...........................................................................................................................................................................................................................................310
  Hyun-Sung Park, Seung-Chur Yang, Doo-Hwan Oh, and Jong-Deok Kim

A Tree-Structured Intelligence Entity Pool and Its Sharing among Ubiquitous Objects ...........................................................................................................................................................................................................................................318
  Runhe Huang, Jianhua Ma, and Qun Jin

A Lightweight Architecture for Secure Two-Party Mobile Payment ...........................................................................................................................................................................................................................................326
  Y. Zhu and J.E. Rice
Embedded Software and Optimization II

Comparison of Bank Change Mechanisms for Banked Reduced Encoding Architectures .................................................................334
    Je-Hyung Lee, Soo-Mook Moon, and Hyung-Kyu Choi
Optimizing Embedded Virtual Machines ........................................................................................................................................342
    Joel Koshy, Raju Pandey, and Ingwar Wirjawan
Support of Paged Register Files for Improving Context Switching on Embedded Processors .................................................................352
    Chung-Wen Huang, Kun-Yuan Hsieh, Jia-Jhe Li, and Jenq Kuen Lee
Dynamic Scratch-Pad Memory Management with Data Pipelining for Embedded Systems .................................................................358
    Yanqin Yang, Meng Wang, Zili Shao, and Minyi Guo
Evaluating the Performance of a Chaos Genetic Algorithm for Solving the Network on Chip Mapping Problem ........................................366
    Fahime Moein-darbari, Ahmad Khademzadeh, and Golnar Gharooni-fard
Reducing Leakage Power of JPEG Image on Asymmetric SRAM ........................................................................................................374
    Yu-Hsun Lin, Xuan-Yi Lin, and Yeh-Ching Chung

Real-Time Embedded Systems

On the Design of Flexible Real-Time Schedulers for Embedded Systems .................................................................382
    Hugo Marcondes, Rafael Cancian, Marcelo Stemmer, and Antônio Augusto Fröhlich
Delayed Interrupt Processing Technique for Reducing Latency of Timer Interruption in Embedded Linux .........................388
    Maobing Dai and Yutaka Ishikawa
Practical Implementation of a Middleware and Software Component Architecture Supporting Reconfigurability of Real-Time Embedded Systems .................................................................394
    Mariusz Pec, Richard Anthony, Paul Ward, and James Hawthorne

Data Management and Multimedia

Blocked-Z Test for Reducing Rasterization, Z Test and Shading Workloads .................................................................402
    Chung-Ping Chung, Hong-Wei Chen, and Hui-Chin Yang
A Hierarchical Primitive Lists Structure for Tile-Based Rendering ........................................................................................................408
    Chih-Chieh Hsiao, Chung-Ping Chung, and Hui-Chin Yang
Methods for Precise False-Overlap Detection in Tile-Based Rendering ........................................................................................................414
    Hsiu-ching Hsieh, Chih-Chieh Hsiao, Hui-Chin Yang, Chung-Ping Chung, and Jean Jyh-Jiun Shann

Reprogrammable Module-Linker for Energy-Efficient Wireless Sensor Networks .....................................................................................................................................................................627  
  
  Seung-Ku Kim, Jae-Ho Lee, Kwang-il Hwang, Kyeong Hur, and Doo-Seop Eom

Robust ID-Based Remote Mutual Authentication with Key Agreement Scheme for Mobile Devices on ECC .....................................................................................................................................................................633  
  
  Eun-Jun Yoon and Kee-Young Yoo

The 2009 International Symposium on Trusted Computing and Communications (TrustCom 2009)

Trust Model, Propagation, and Management

Modeling and Analysis of Trust Management for Cognitive Mission-Driven Group Communication Systems in Mobile Ad Hoc Networks .....................................................................................................................................................................641  
  
  Jin-Hee Cho, Ananthram Swami, and Ing-Ray Chen

Design and Validation of PATRICIA for the Mitigation of Network Flooding Attacks .....................................................................................................................................................................651  
  
  Lan Wang, Qishi Wu, and Yaoqing Liu
Data Deletion with Time-Aware Adversary Model .................................................................659
Marek Klonowski, Michal Przyucki, and Tomasz Strumiński

Obfuscation Mechanism in Conjunction with Tamper-Proof Module ...................................................665
Kazuhide Fukushima, Shinsaku Kiyomoto, and Toshiaki Tanaka

TBDRM: A TPM-Based Secure DRM Architecture ........................................................................671
Aimin Yu, Dengguo Feng, and Ren Liu

A Novel Server-Based Application Execution Architecture ............................................................678
Chao Chen, Ke Wang, Shuren Liao, Qiuyan Zhang, and Yiqi Dai

Multidimensional Dynamic Trust Management for Federated Services ..............................................684
Latifa Boursas and Wolfgang Hommel

Trusted Services and Applications

Security Protocol Testing Using Attack Trees ..................................................................................690
Anderson Morais, Eliane Martins, Ana Cavalli, and Willy Jimenez

Optimal LFSR-Coding Test Data Compression Based on Test Cube Dividing .................................698
Maoxiang Yi, Huaguo Liang, Kaihua Zhan, and Cuiyun Jiang

Quasi-classical Semantics and Tableau Calculus of Description Logics for Paraconsistent Reasoning in the Semantic Web ..........................................................703
Hui Hou and Jinzhao Wu

Concurrency Control Strategy to Reduce Frequent Rollbacks in Mobile Environments .......................709
Salman Abdul Moiz and Lakshmi Rajamani

Cryptography and Security Protocols

An Efficient Privacy Preserving Keyword Search Scheme in Cloud Computing ..............................715
Qin Liu, Guojun Wang, and Jie Wu

A Direct Anonymous Attestation Protocol Based on Hierarchical Group Signature ..........................721
Rong-wei Yu, Li-na Wang, Xiao-yan Ma, and Bo Kuang

Zhenyu Wang, Jianhua Huang, Yu Wang, Xiangdong Li, Xuetao Sun, and Ruimin Wang

An Anonymous Property-Based Attestation Protocol from Bilinear Maps ..................................732
Qin Yu, Feng DengGuo, and Xu Zhen

Bio-chaotic Stream Cipher-Based Iris Image Encryption ................................................................739
Abdullah Sharaf Alghamdi, Hanif Ullah, Maqsood Mahmud, and Muhammad Khurram Khan
Reliability, Survivability, and Fault Tolerance

Trust-Based Countermeasures for Securing OLSR Protocol ......................................................... 745
Asmaa Adnane, Christophe Bidan, and Rafael Timoteo de Sousa Junior

Fault Tolerance in MANETs Using a Task-to-Resource Reallocation Framework .......................................................... 753
Adrian P. Lauf and William H. Robinson

An Effective RM-Based Scheduling Algorithm for Fault-Tolerant Real-Time Systems .......................................................... 759
Wanfu Ding and Ruifeng Guo

RepCom: Towards Reputation Composition over Peer-to-Peer Communities ................................................. 765
Gang Yin, Dianxi Shi, Huaimin Wang, and Min Guo

HASS: Highly Available, Scalable and Secure Distributed Data Storage Systems ......................................................... 772
Zhiqian Xu and Hai Jiang

Reliable Identities Using Off-the-Shelf Hardware Security in MANETs ......................................................... 781
Nicolai Kuntze, Andreas Fuchs, and Carsten Rudolph

Access Control and Authentication

Distributed Node Selection for Threshold Key Management with Intrusion Detection in Mobile Ad Hoc Networks ......................................................... 787
F. Richard Yu, Helen Tang, Fei Wang, and Victor C.M. Leung

HACK: A Health-Based Access Control Mechanism for Dynamic Enterprise Environments ......................................................... 795
Chenjia Wang, Kevin P. Monaghan, and Weisong Shi

Misbehavior Detection Using Implicit Trust Relations in the AODV Routing Protocol ......................................................... 802
Mohamed Ali Ayachi, Christophe Bidan, Tarek Abbes, and Adel Bouhoula

DAAODV: A Secure Ad Hoc Routing Protocol Based on Direct Anonymous Attestation ......................................................... 809
Wenchao Huang, Yan Xiong, and Depin Chen

A GEP-Based Anomaly Detection Scheme in Wireless Sensor Networks ......................................................... 817
Honglei Gao, Guolong Chen, and Wenzhong Guo

L-UCON: Towards Layered Access Control with UCON ......................................................... 823
Hao Hu, Hao Li, and Dengguo Feng

Trusted Computing Platform and Software

Hardware Containers for Software Components: A Trusted Platform for COTS-Based Systems ......................................................... 830
Eugen Leontie, Gedare Bloom, Bhagirath Narahari, Rahul Simha, and Joseph Zambreno

A Software Based Approach for Trusted Agent Execution on Malicious Host ......................................................... 837
Sarosh Hashmi and John Brooke
A Smart Card Power Analysis Simulator ................................................................. 847
   Céline Thuillet, Philippe Andouard, and Olivier Ly
TSGen: A UML Activity Diagram-Based Test Scenario Generation Tool .................. 853
   Chang-ai Sun, Baobao Zhang, and Jin Li
Lightweight Hardware Return Address and Stack Frame Tracking to Prevent
Function Return Address Attack .............................................................................. 859
   Wen-Fu Kao and S. Felix Wu
RBAC-Based Secure Interoperation Using Constraint Logic Programming ................ 867
   Jinwei Hu, Ruixuan Li, and Zhengding Lu

The 2nd International Workshop on Adaptation in Wireless Sensor Networks (AWSN 2009)
Key Predistribution Schemes Using Block Designs in Wireless Sensor Networks .......... 873
   Sushmita Ruj, Jennifer Seberry, and Bimal Roy
HWSN6: Hospital Wireless Sensor Networks Based on 6LoWPAN Technology: Mobility and Fault Tolerance Management ............................................................. 879
   Antonio J. Jara, Miguel A. Zamora, and Antonio F.G. Skarmeta
Autonomous Management and Control of Sensor Network-Based Applications ........... 885
   A.G. Ruzzelli, C. Muldoon, A. Schoofs, T. Campana, G.M.P. O’Hare, and R. Tynan
Intelligent Middleware for Adaptive Sensing of Tennis Coaching Sessions .................. 891
   Richard Tynan, Anthony Schoofs, Conor Muldoon, G.M.P. O’Hare, Ciaran O’Conaire,
   Philip Kelly, and Noel E. O’Connor
Petri Net Based Reconfigurable Wireless Sensor Networks for Intelligent Monitoring Systems ........................................................................................................................................ 897
   Chung-Hsien Kuo and Jia-Wun Siao

The 2009 International Workshop on Reconfigurable and Multicore Embedded Systems (WoRMES 2009)
Architecture Synthesis Methodology for Run-Time Reconfigurable Systems .................. 903
   Pil Woo Chun and Lev Kirischian
Run-Time Component Relocation in Partially-Reconfigurable FPGAs .......................... 909
   Victor Dumitriu, Dennis Marcantonio, and Lev Kirischian
Efficient Translation of Algorithmic Kernels on Large-Scale Multi-cores ...................... 915
   Amit Pande and Joseph Zambreno
Multi-objective Placement of Reconfigurable Hardware Tasks in Real-Time System ................................................................................................................................. 921
   Chun-Hsien Lu, Hsiao-Win Liao, and Pao-Ann Hsiung
From Reconfigurable Architectures to Self-Adaptive Autonomic Systems .................... 926
   Marco D. Santambrogio
The First International Workshop on Pervasive Multimedia Sensor Networks (PMSN 2009)

A Fast H.264 Spatial Downscaling Transcoder for Wireless Communication ................................................. 932
  Min Li, Naixue Xiong, and Chao Ma

Link-Aware Geographic Routing in Wireless Sensor Networks ................................................................. 937
  Heng Chen, Depei Qian, Weiguo Wu, and Weiwei Fang

A Congestion Control Framework for Handling Video Surveillance Traffics on WSN ................................................................. 943
  M. Maimour, C. Pham, and D. Hoang

Research on an Improved Genetic Algorithm Which Can Improve the Node Positioning Optimized Solution of Wireless Sensor Networks ................................................................. 949
  Bing Jiang, Wei Zhang, and Pan Zhang

A Self-Similarity Frame Traffic Model Based on the Frame Components in 802.11 Networks ................................................................. 955
  Lin Xiang, Xiaohu Ge, Ke Zhang, and Chuang Liu

Cross-Layer Optimized Data Gathering in Wireless Multimedia Sensor Networks ................................................................. 961
  Lei Shu, Manfred Hauswirth, Lei Wang, Yan Zhang, and Jong Hyuk Park

Prediction and Key Computer Programming of Mechanical Properties of Hot Rolled Plate Based on BP Neural Network ................................................................. 967
  Qinghua Zou, Li Chen, Naixue Xiong, Shengzhong Zou, and Chuanbing Wang

The 3rd International Workshop on Ubiquitous UnderWater Sensor Networks (UUWSN 2009)

Efficient UDD Architecture for Underwater Wireless Acoustic Sensor Network ................................................................. 972
  Seung-Joo Lee, Jung-II Namgung, and Soo-Hyun Park

An Underwater Communication Modem Using TMS320C6416 DSK ................................................................. 978
  Tae-Hee Won, Jun-Ho Jeon, and Sung-Joon Park

Neighbor Nodes Aware MAC Scheduling Scheme in Underwater Acoustic Sensor Networks ................................................................. 982
  Nam-Yeol Yun, Hui-Jin Cho, and Soo-Hyun Park

Design of OFDM System for High Speed Underwater Communication ................................................................. 988
  Jeong-woo Han, Se-young Kim, Ki-man Kim, Seung-Young Chun, and Kwon Son

The 2009 International Workshop on Ubiquitous Network Computing (UNC 2009)
Ubiquitous Network Systems

An Improved Chinese Segmentation Algorithm Based on New Dictionary Construction

Yan Niu and Lala Li

Network Bandwidth Allocation Based on QoS in iSCSI OSD Storage System

Yong Su

Wireless ECG Monitoring System Based on OMAP

Jing Liang and Yinqin Wu

Network Algorithms

Routing in 802.11-Based Wireless Mesh Networks

Hao Zimian, Wei Xiong, Xiong Naixue, and He Yuhan

An Improved SPECK Algorithm with Bit Plane Lifting and the Optimal Single Value Prediction

Xubing Zhang, Yong Zhu, and Jianhong Fu

A Research on the Self-Applicable Network Virtual Storage Data Distribution Arithmetic

Wei Xiong, Xu Xianbin, Xiong Naixue, and He Ruhan

Ubiquitous Multimedia Computing

Mobile Agent-Based Data Gathering for Web Image Retrieval

Ruhan He, Yong Zhu, Naixue Xiong, Wei Zhan, and Yanjun Zhao

A Videoconference System on the Campus Networks Based on H.323 Protocol

Yean Yin, WenBing Lu, and Ke Zhang

Edge Detection Based on Fast Adaptive Mean Shift Algorithm

Yong Zhu, Ruhan He, Naixue Xiong, Pu Shi, and Zhiguang Zhang

Ubiquitous Applications

Implementation of Unlimited Integer

Kong Weiguang, Zhu Yong, and Wang Yuan

Ride Comfort Simulation Based on the Vibration Characteristics of the Two-Mass System of Vehicle Body and Wheels

H.X. Yang and F.M. Chen

An Analysis and Hierarchical Decomposition for HAMs

Du Xiaojin, Li Qinghua, and Han Jianjun

Computer Calculation and Plotting on Dynamical Phase Diagrams of Carbon Steel

Qing-hua Zou, Li Chen, Naixue Xiong, Sheng-zhong Zou, and Chuan-bing Wang

A Survey on Fault-Tolerance in Distributed Network Systems

Naixue Xiong, Yan Yang, Ming Cao, Jing He, and Lei Shu
A Hybrid Computational Approach for the Prediction of Small Non-coding RNAs from Genome Sequences
Ning Yu, Kyu Hong Cho, Qiang Cheng, and Rafael A. Tesorero

A New Computational Tool for the Post Session Analysis of the Prepulse Inhibition Test in Neural Science
Hongbo Zhou, Hong-Ju Yang, Haiyun Xu, and Qiang Cheng

WiFi-Based Telemedicine System: Signal Accuracy and Security
Huyu Qu, Jie Cheng, Qiang Cheng, and Le Yi Wang

Fast Fusion of Medical Images Based on Bayesian Risk Minimization and Pixon Map
Hongbo Zhou, Qiang Cheng, and Mehdi Zargham

Using Discovery and Monitoring Services to Support Context-Aware Remote Assisted Living Applications
André Luiz B. Rodrigues, Izabela C. Gomes, Leila N. Bezerra, Alexandre Sztajnberg, Sérgio T. Carvalho, Alessandro Copetti, and Orlando Loques

Goal-Oriented Software Security Engineering: The Electronic Smart Card Case Study .............................................................................................................................................................................213
  Riham Hassan, Mohamed Eltoweissy, Shawn Bohner, and Sherif El-Kassas
A Unified Approach to Intra-domain Security ............................................................................................................................................................219
  Craig A. Shue, Andrew J. Kalafut, and Minaxi Gupta
Risk and Trust I

A Low-Cost Green IT Design and Application of VHSP Based on Virtualization Technology ............................................................225
  Chih-Hung Chang

Improving Host Profiling with Bidirectional Flows .............................................................231
  Pavel Minařík, Jan Vykoval, and Vojtěch Krmiček

Nearby-Friend Discovery Protocol for Multiple Users ...........................................................238
  Shashwat Raizada, Goutam Paul, and Vineet Pandey

The Insider Threat Security Architecture: A Framework for an Integrated, Inseparable, and Uninterrupted Self-Protection Mechanism .................................................................244
  Ghassan "Gus" Jabbour and Daniel A. Menascé

Risk and Trust II

Reputation-Based Ontology Alignment for Autonomy and Interoperability in Distributed Access Control .............................................................252
  Daniel Trivellato, Fred Spiessens, Nicola Zannone, and Sandro Etalle

How to overcome the 'Trusted Node Model' in Quantum Cryptography .............................................................259
  Peter Schartner and Stefan Rass

The Influence of Personalities Upon the Dynamics of Trust and Reputation .............................................................263
  Mark Hoogendoorn and S. Waqar Jaffry

Large Online Social Footprints--An Emerging Threat .............................................................271
  Danesh Irani, Steve Webb, Kang Li, and Calton Pu

Risk and Trust III

A Case Study of Individual Trust Development in Computer Mediated Collaboration Teams .............................................................277
  Xusen Cheng, Linda Macaulay, and Alex Zarifi

On the Feasibility of Remote Attestation for Web Services .............................................................283
  John Lyle and Andrew Martin

Verifying the Interplay of Authorization Policies and Workflow in Service-Oriented Architectures .............................................................289
  Michele Barletta, Silvio Ranise, and Luca Viganò

ProActive Caching: Generating Caching Heuristics for Business Process Environments .............................................................297
  Mathias Kohler, Achim D. Brucker, and Andreas Schaad
The 2009 International Symposium on Privacy and Security Applications (PSA 2009)

Privacy and Security I

Combining Attribute-Based and Access Systems .................................................................305
  Behzad Malek and Ali Miri

Analysis of the GMPLS Control Plane Security .................................................................313
  Ayonote Clement, Pavol Zavarsky, and Dale Lindskog

Diversity in Network Attacker Motivation: A Literature Review .......................................319
  Mark Rounds and Norman Pendgraft

Privacy and Security II

Emergency Privacy Measures ............................................................................................324
  Hendrik J.G. Oberholzer and Martin S. Olivier

Designing Privacy for Scalable Electronic Healthcare Linkage ........................................330
  Anthony Stell, Richard Sinnott, Oluwafemi Ajayi, and Jipu Jiang

Routing Policy Conflict Detection without Violating ISP's Privacy .....................................337
  Ning Hu, Peidong Zhu, Huayang Cao, and Kan Chen

Practical Values for Privacy ...............................................................................................343
  Benjamin Wasser and Justin Zhan

Privacy and Security III

Phishpin: An Identity-Based Anti-phishing Approach .........................................................347
  Hicham Tout and William Hafner

Security Implications of Virtualization: A Literature Study .............................................353
  André van Cleeff, Wolter Pieters, and Roel J. Wieringa

ViDPSec Visual Device Pairing Security Protocol .............................................................359
  Dimitris Zisiadis, Spyros Kopsidas, and Leandros Tassiulas

Lightweight IDS Based on Features Selection and IDS Classification Scheme ..................365
  Safaa Zaman and Fakhri Karray

Risk and Trust

A Study of the Methods for Improving Internet Usage Policy Compliance .......................371
  Mandeep Saran and Pavol Zavarsky

  Shi-Cho Cha, Li-Ting Liu, and Bo-Chen Yu

An Efficient Framework for IT Controls of Bill 198 (Canada Sarbanes-Oxley) ...............386
  Zhitao Huang, Pavol Zavarsky, and Ron Ruhl

Ceremonies Formal Analysis in PKI’s Context .................................................................392
  Jean Everson Martina, Túlio Cicero Salavaro de Souza, and Ricardo Felipe Custódio
# The 2009 International Workshop on Software Security Processes (SSP 2009)

## Software Engineering for Security

Activity and Artifact Views of a Secure Software Development Process ................................................................. 399  
*Muhammad Umair Ahmed Khan and Mohammad Zulkernine*

An AHP-Based Framework for Quality and Security Evaluation ...................................................................................... 405  
*V. Casola, A.R. Fasolino, N. Mazzocca, and P. Tramontana*

Assurance Process for Large Open Source Code Bases .................................................................................................. 412  
*Claudio A. Ardagna, Massimo Banzi, Ernesto Damiani, and Fulvio Frati*

Code Obfuscation Using Pseudo-random Number Generators .......................................................................................... 418  
*John Aycock, Juan Manuel Gutiérrez Cárdenas, and Daniel Medeiro Nunes de Castro*

Misuse Cases + Assets + Security Goals ......................................................................................................................... 424  
*Takao Okubo, Kenji Taguchi, and Nobukazu Yoshioka*

## Data Privacy

Specification of Fair Data Practice Principles Using Privacy Policy Languages ................................................................. 430  
*Girma Nigusse, Bart De Decker, and Vincent Naessens*

Limiting Private Data Exposure in Online Transactions: A User-Based Online Privacy Assurance Model ................................. 438  
*Alaa Aref El Masri and João Pedro Sousa*

A Privacy Framework for Personal Self-Improving Smart Spaces ...................................................................................... 444  
*N. Liampotis, I. Roussaki, E. Papadopoulou, Y. Abu-Shaaban, M.H. Williams, N.K. Taylor, S.M. McBurney, and K. Dolinar*

Knowledge Acquisition and Insider Threat Prediction in Relational Database Systems ...................................................... 450  
*Qussai Yaseen and Brajendra Panda*

## Risk Management

Managing Risk of IT Security Outsourcing in the Decision-Making Stage ........................................................................... 456  
*Samuel Oladapo, Pavol Zavarsky, Ron Ruhl, Dale Lindskog, and Andy Igonor*

*Fariborz Farahmand, Melissa Dark, Sydney Liles, and Brandon Sorge*

Managing Risks on Critical IT Systems in Public Service Organizations ........................................................................ 470  
*Yeni Yuqin Li Helgesson*

Effects of Individual and Organization Based Beliefs and the Moderating Role of Work Experience on Insiders’ Good Security Behaviors .................................................................................................. 476  
*Burcu Bulgurcu, Hasan Cavusoglu, and Izak Benbasat*
Trust and Security Models and Emerging Approaches

A Dynamic Trust Evaluation Model on C2C Marketplaces .............................................................................482
    Yun Yang and Juhua Chen

Threat Modeling for CSRF Attacks ......................................................................................................................486
    Xiaoli Lin, Pavol Zavarsky, Ron Ruhl, and Dale Lindskog

A Novel Approach to DRM Systems ...................................................................................................................492
    F. Frattolillo, F. Landolfi, and F. Marulli

Worm Path Identification Using Visualization System ..........................................................................................498
    Seiji Shibaguchi, Yuki Nakayama, and Ken-ichi Okada

A Simulation of Various Variable Hacker Populations ........................................................................................504
    Norman Pendegraft and Mark Rounds

Social Computing I

Edge Anonymity in Social Network Graphs .................................................................1
  Lijie Zhang and Weining Zhang

Guanxi in the Chinese Web .........................................................................................9
  Valerie King, Louis Yu, and Yan Zhuang

Anomaly Detection in Dynamic Social Systems Using Weak Estimators ..................18
  Justin Zhan, B. John Oommen, and Johanna Crisostomo

Structure of Neighborhoods in a Large Social Network ............................................26
  Alina Stoica and Christophe Prieur

Social Computing II

Deriving Expertise Profiles from Tags ........................................................................34
  Adriana Budura, Daniela Bourges-Waldeg, and James Riordan

Probabilistic Generative Models of the Social Annotation Process .........................42
  Said Kashoob, James Caverlee, and Elham Khabiri

Detecting Communities from Bipartite Networks Based on Bipartite Modularities ....50
  Tsuyoshi Murata

Visually and Acoustically Exploring the High-Dimensional Space of Music ...............58
  Lukas Bossard, Michael Kuhn, and Roger Wattenhofer
Social Computing III

A Semantic Imitation Model of Social Tag Choices .................................................................66
  Wai-Tat Fu, Thomas George Kannampallil, and Ruogu Kang

A Visual Interface for Social Information Filtering ...............................................................74
  John O'Donovan, Brynjar Gretarsson, Svetlin Bostandjiev, Tobias Höllerer,
  and Barry Smyth

Equilibria and Efficiency Loss in Games on Networks ............................................................82
  Joshua R. Davis, Zachary Goldman, Jacob Hilty, Elizabeth N. Koch,
  David Liben-Nowell, Alexa Sharp, Tom Wexler, and Emma Zhou

Ranking Comments on the Social Web ......................................................................................90
  Chiao-Fang Hsu, Elham Khabiri, and James Caverlee

Social Computing IV

Structure of Heterogeneous Networks .....................................................................................98
  Rumi Ghosh and Kristina Lerman

Online User Activities Discovery Based on Time Dependent Data ........................................106
  Dan Hong and Vincent Y. Shen

Socio-semantic Dynamics in a Blog Network .........................................................................114
  Jean-Philippe Cointet and Camille Roth

The Formation of Task-Oriented Groups: Exploring Combat Activities
in Online Games .........................................................................................................................122
  Yun Huang, Mengxiao Zhu, Jing Wang, Nishith Pathak, Cuihua Shen, Brian Keegan,
  Dmitri Williams, and Noshir Contractor

Social Computing V

Incremental SVM Model for Spam Detection on Dynamic Email Social
Networks ........................................................................................................................................128
  Chi-Yao Tseng and Ming-Syan Chen

Evaluating the Impact of Attacks in Collaborative Tagging Environments ............................136
  Maryam Ramezani, J.J. Sandvig, Tom Schimoler, Jonathan Gemmell,
  Bamshad Mobasher, and Robin Burke

Community Computing: Comparisons between Rural and Urban Societies
Using Mobile Phone Data ............................................................................................................144
  Nathan Eagle, Yves-Alexandre de Montjoye, and Luís M.A. Bettencourt

Social Synchrony: Predicting Mimicry of User Actions in Online Social Media ....................151
  Munmun De Choudhury, Hari Sundaram, Ajita John, and Dorée Duncan Seligmann
The 2009 International Symposium on Social Intelligence and Networking (SIN 2009)

Social Intelligence and Networking I

Representing Small Group Evolution .................................................................159
  Whitman Richards and Nicholas Wormald

Private Buddy Search: Enabling Private Spatial Queries in Social Networks ..........166
  Ali Khoshgozaran and Cyrus Shahabi

Multi-level Cellular Automata & Social Dynamics .............................................174
  Jan J. Koenderink and Whitman Richards

Extended Social Tags: Identity Tags Meet Social Networks ..............................181
  Sonia Lajmi, Johann Stan, Hakim Hacid, Előd Egyed-Zsigmond, and Pierre Maret

Social Intelligence and Networking II

Size Matters: Variation in Personal Network Size, Personality and Effect on Information Transmission .................................................................188
  Yu-En Lu, Sam Roberts, Pietro Lio, Robin Dunbar, and Jon Crowcroft

TagRec: Leveraging Tagging Wisdom for Recommendation .............................194
  Tom Chao Zhou, Hao Ma, Irwin King, and Michael R. Lyu

Development and Validation of an Agent-Based Simulation Model of Juvenile Delinquency ..............................................................200
  Tibor Bosse, Charlotte Gerritsen, Michel C.A. Klein, and Frank M. Weerman

Using Hierarchical Bayesian Models to Learn about Reputation .......................208
  Philip Hendrix, Yaakov Gal, and Avi Pfeffer

Web Science 2.0: Identifying Trends through Semantic Social Network Analysis .................................................................215
  Peter A. Gloor, Jonas Krauss, Stefan Nann, Kai Fischbach, and Detlef Schoder

Social Intelligence and Networking III

Social Awareness Concepts to Support Social Computing ...............................223
  Andry Rakotonirainy, Seng W. Loke, and Patricia Obst

An Agent-Based Approach to Modeling and Analysis of Safety Culture in Air Traffic ..............................................................229
  Alexei Sharpanskykh and Sybert Stroeve

Clustering Signature in Complex Social Networks .............................................237
  Ueli Peter and Tomas Hruz

Inferring the Maximum Likelihood Hierarchy in Social Networks ......................245
  Arun S. Maiya and Tanya Y. Berger-Wolf

Is the Crowd’s Wisdom Biased? A Quantitative Analysis of Three Online Communities .................................................................251
  Vassilis Kostakos
Social Intelligence and Networking IV

Social Learning Applications in Resource Constrained Networks ................................................................. 256
  Ali Saidi, Mahesh V. Tripunitara, and Mojdeh Mohtashemi

Analysis of a Location-Based Social Network .................................................................................................. 263
  Nan Li and Guanling Chen

Modeling User Perception of Interaction Opportunities for Effective Teamwork .................................................. 271
  Ece Kamar, Ya’akov Gal, and Barbara J. Grosz

Finding Cohesive Subgroups and Relevant Members in the Nokia Friend View Mobile Social Network ........................................... 278
  Alvin Chin

Capturing On-Line Social Network Link Dynamics Using Event-Driven Sampling .............................................. 284
  Dan Corlette and Frank Shipman III

Social Intelligence and Networking V

How Did You Get to Know That? A Traceable Word-of-Mouth Algorithm ............................................................ 292
  Manuel Cebrián, Enrique Frias-Martínez, Heath Hohwald, Ruben Lara, and Nuria Oliver

A Second-Order Markov Random Walk Approach for Collaborative Filtering ...................................................... 298
  Su Chen, Tiejian Luo, and Tingshao Zhu

Towards Demarcation and Modeling of Small Sub-Communities/Groups in P2P Social Networks ...................................... 304
  Georg Groh and Verena Rappel

Extracting Multi-facet Community Structure from Bipartite Networks ................................................................... 312
  Kenta Suzuki and Ken Wakita

Social Intelligence and Networking VI

The Use of Online Videos in the 2008 U.S. Congressional Elections ..................................................................... 320
  Eni Mustafaraj, Panagiotis Takis Metaxas, and Catherine Grevet

The Social Behaviors of Experts in Massive Multiplayer Online Role-Playing Games .............................................. 326
  David Huffaker, Jing (Annie) Wang, Jeffrey Treem, Muhammad A. Ahmad, Lindsay Fullerton, Dmitri Williams, Marshall Scott Poole, and Noshir Contractor

First Steps to Netviz Nirvana: Evaluating Social Network Analysis with NodeXL ................................................................ 332
  Elizabeth M. Bonsignore, Cody Dunne, Dana Rotman, Marc Smith, Tony Capone, Derek L. Hansen, and Ben Shneiderman

Mining for Gold Farmers: Automatic Detection of Deviant Players in MMOGs .................................................... 340
  Muhammad Aurangzeb Ahmad, Brian Keegan, Jaideep Srivastava, Dmitri Williams, and Noshir Contractor
Social Intelligence and Networking VII

Surfing a Web of Trust: Reputation and Reciprocity on CouchSurfing.com .......................................................... 346
  Debra Lauterbach, Hung Truong, Tanuj Shah, and Lada Adamic
Virtually There: Exploring Proximity and Homophily in a Virtual World ................................................................. 354
  Yun Huang, Cuihua Shen, Dmitri Williams, and Noshir Contractor
The Altruistic Searcher ........................................................................................................................................... 360
  Barry Smyth, Maurice Coyle, and Peter Briggs
On the Design of Collective Applications ........................................................................................................... 368
  Jon Dron and Terry Anderson
Inferring Unobservable Inter-community Links in Large Social Networks ........................................................... 375
  Heath Hohwald, Manuel Cebrián, Arturo Canales, Rubén Lara, and Nuria Oliver

Social Intelligence and Networking VIII

Social Relationship Identification: An Example of Social Query ............................................................................... 381
  Christopher P. Diehl, Jaime Montemayor, and Mike Pekala
metaViz: Visualizing Computationally Identified Metaphors in Political Blogs .................................................. 389
  Eric P.S. Baumer, Jordan Sinclair, David Hubin, and Bill Tomlinson
Implementing Social Norms Using Policies ........................................................................................................ 395
  Robert Kremer
Usable Privacy Controls for Blogs ....................................................................................................................... 401
  Michael Hart, Claude Castille, Rob Johnson, and Amanda Stent
Feedback Loops of Attention in Peer Production ............................................................................................... 409
  Fang Wu, Dennis M. Wilkinson, and Bernardo A. Huberman

Social Intelligence and Networking IX

New Media Use in Context: Environmental Cues and Online Self-Disclosure via Weblogs ......................................................... 416
  Michael A. Stefanone, Chyng-Yang Jang, and Nathan Claes
Churn Prediction in MMORPGs: A Social Influence Based Approach .................................................................. 423
  Jaya Kawale, Aditya Pal, and Jaideep Srivastava
SpamClean: Towards Spam-Free Tagging Systems ............................................................................................. 429
  Ennan Zhai, Huiping Sun, Sihan Qing, and Zhong Chen
Social Authentication Protocol for Mobile Phones .............................................................................................. 436
  Bijan Soleymani and Muthucumaru Maheswaran
Modeling Ethno-religious Conflicts as Prisoner's Dilemma Game in Graphs .................................................... 442
  Lingzhi Luo, Nilanjana Chakraborty, and Katia Sycara
Social Intelligence and Networking X

Whither the Experts? Social Affordances and the Cultivation of Experts in Community Q&A Systems ........................................... 450
   Howard T. Welser, Eric Gleave, Vladimir Barash, Marc Smith, and Jessica Meckes

The Power of Grassroots Influentials: The Optimal Heterophily between Sender and Receiver ........................................ 456
   Hikaru Yamamoto and Naohiro Matsumura

A Model of Tacit Knowledge and Action .................................................. 463
   Ya'akov Gal, Rajesh Kasturirangan, Avi Pfeffer, and Whitman Richards

iKnow Where You Are ............................................................................ 469
   Kalyan Subbu, Ning Xu, and Ram Dantu

Incorporating Participant Reputation in Community-Driven Question Answering Systems ........................................ 475
   Liangjie Hong, Zaihan Yang, and Brian D. Davison

Social Intelligence and Networking XI

Expertise Modeling and Recommendation in Online Question and Answer Forums ........................................................................ 481
   Suratna Budalakoti, David DeAngelis, and K. Suzanne Barber

Quantifying Utility and Trustworthiness for Advice Shared on Online Social Media ........................................................................ 489
   Sai T. Moturu, Jian Yang, and Huan Liu

A Language of Life: Characterizing People Using Cell Phone Tracks ................................................................................. 495
   Alexy Khrabrov and George Cybenko

The 2009 International Symposium on Social Computing Applications (SCA 2009)

Social Computing Applications I

On the Synergy of Conflict and Collective Creativity in Open Innovation Socio-technical Ecologies ................................................................. 502
   Levent Yilmaz

Investigating User Experience of Online Communities: The Influence of Community Type .................................................... 509
   Vivian Hsueh-Hua Chen and Henry Been-Lirn Duh

Enabling Video-Blogging without Relying on External Service-Providers .................................................................................. 515
   Justus Bross, Janosch Oppermann, and Christoph Meinel

Improving Interobserver Reliability by Artificial Intelligence Techniques in Behavioural Research ................................................. 523
   Arjen van Alphen, Tibor Bosse, Catholijn M. Jonker, and Francien Koeman
Social Computing Applications II

Social Interaction History: A Framework for Supporting Exploration of Social Information Spaces ................................................................. Indratmo and Julita Vassileva

Social Network Analysis and Geotemporal Reasoning in a Web 3.0 World ................................................................. Jans Aasman

Emergence of Social Norms in Complex Networks ................................................................................................................ Yu Zhang and Jason Leezer

Local Semi-linear Regression for River Runoff Forecasting ........................................................................................................ Fan Min and Xindong Wu

Social Computing Applications III

Centrality and Power among Website Users: A Social Network Analysis Application .................................................................................................................. G. Michael McGrath

Introducing Electronic Child Records: Balancing Personal Interests, System Performance, and Social Values ............................................................................................................ Guido van Heck, Itamar Sharon, Paulus Kampert, and Jan van den Berg

Towards an Introduction to Collaborative Filtering ................................................................................................................ Jia Zhou and Tiejian Luo

Collaborative Mining in Multiple Social Networks Data for Criminal Group Discovery ................................................................................................................ Amin Milani Fard and Martin Ester

Web Page Classification Using Social Tags ................................................................................................................ Sadegh Aliakbary, Hassan Abolhassani, Hossein Rahmani, and Behrooz Nobakht

Social Computing Applications IV

Davis Social Links or: How I Learned to Stop Worrying and Love the Net ........................................................................................................ Matt Spear, Xiaoming Lu, and S. Felix Wu

A Stigmergy Approach for Open Source Software Developer Community Simulation ........................................................................................................... Xiaohui Cui, Justin Beaver, Jim Treadwell, Thomas Potok, and Laura Pullum

Personality in Social Group Dynamics ................................................................................................................ Rui Prada, Samuel Ma, and Maria Augusta Nunes

Lending Behavior and Community Structure in an Online Peer-to-Peer Economic Network ........................................................................................................ Katherine Ann Krumme and Sergio Herrero
Temporal Issue Trend Identifications in Blogs .......................................................................................... 619
Il-Chul Moon, Young-Min Kim, Hyun-Jong Lee, and Alice H. Oh

Social Computing Applications V

Gaming On and Off the Social Graph: The Social Structure of Facebook Games ........................................................................................................................................................................ 627
Ben Kirman, Shaun Lawson, and Conor Linehan

The Socio-cultural Factors Influencing Online Female Consumers in Saudi Arabia ........................................................................................................................................................................ 633
Khulood Rambo, Kecheng Liu, and Keiichi Nakata

Experience Search: Accessing the Emergent Knowledge from Annotated Blog Postings ........................................................................................................................................................................ 639
Tae-Gil Noh, Yong-Jin Han, Jeong-Woo Son, Hyun-Jae Song, Hee-Geun Yoon, Jae-Ahn Lee, Sang-Do Lee, Kye-Sung Kim, Young-Hwa Lee, Seong-Bae Park, Se-Young Park, and Sang-Jo Lee

Adaptive Tourism Modeling and Socialization System .................................................................................... 645
Bruno Coelho, Constantino Martins, and Ana Almeida

Open Editing Algorithm: A Collaborative News Promotion Algorithm Based on Users’ Voting History ........................................................................................................................................................................ 653
Joonseong Ko, Kanghak Kim, Ohyeon Kweon, Jongwook Kim, Young-rin Kim, and Sangki "Steve" Han

Social Computing Applications VI

Designing Social Computing Using Traditions of Symbolism, Personalization, and Gift Culture ........................................................................................................................................................................ 659
Yin He and Thecla Schiphorst

Social Ability in Online Groups: Representing the Quality of Interactions in Social Computing Environments ........................................................................................................................................................................ 667
Sean P. Goggins, James Laffey, and Krista Galyen

A Study of Information Diffusion over a Realistic Social Network Model ........................................................................................................................................................................ 675
Andrea Apolloni, Karthik Channakeshava, Lisa Durbeck, Maleq Khan, Chris Kuhlman, Bryan Lewis, and Samarth Swarup

Modeling Human, Social, Cultural or Behavioral Events for Real World Applications: Results and Implications from the State Stability Project ........................................................................................................................................................................ 683
Anne Russell and Mark Clark

Social Computing Applications VII

System Theoretic Formalization of Social Group Processes and Optimal Evidence-Indicator Discovery ........................................................................................................................................................................ 691
Payam Saisan, Anne Russell, Mark Clark, and Stephen Krotosky

Co-located Many-Player Gaming on Large High-Resolution Displays ........................................................................................................................................................................ 697
David Machaj, Christopher Andrews, and Chris North
Analyzing Enterprise Social Media Networks .................................................................705
Marc Smith, Derek L. Hansen, and Eric Gleave

Mining and Analyzing Multirelational Social Networks ..................................................711
Victor Stroele, Jonice Oliveira, Geraldo Zimbrão, and Jano M. Souza

Development of a Meeting Browser towards Supporting Public Involvement ..................717
Shun Shiramatsu, Tadachika Ozono, Toramatsu Shintani, Kazunori Komatani,
Tetsuya Ogata, Toru Takahashti, and Hiroshi G. Okuno

Social Computing Applications VIII

A Survey of Human Computation Systems ........................................................................723
Man-Ching Yuen, Ling-Jyh Chen, and Irwin King

Tag Sense Disambiguation for Clarifying the Vocabulary of Social Tags ..........................729
Kangpyo Lee, Hyunwoo Kim, Hyopil Shin, and Hyoung-Joo Kim

Predicting Interests of People on Online Social Networks ...........................................735
Apoorv Agarwal, Owen Rambow, and Nandini Bhardwaj

Will Networking Nerds Pay for Stuff That Matters? The Relationship
between Social Networks and Subscriptions in Virtual Communities ..........................741
Melanie Bernier and Dale Ganley

Names of Our Lives ...........................................................................................................747
Benjamin M. Gross

Social Computing Applications IX

Using Qtag to Extract Dominant Public Opinion in Very Large-Scale
Conversation .........................................................................................................................753
Sung Eob Lee, Taeksoo Chun, and "Steve" SangKi Han

Study on Collective Memory in the Blogosphere .............................................................759
Young Sik Kim, Kibeom Lee, and "Steve" Sangki Han

Personal Management of Social Networks Data ............................................................765
Mauro San Martin and Claudio Gutierrez

The Effect of Trust and Perceived Risk on Consumers’ Online Purchase
Intention ............................................................................................................................771
Daw-Song Zhu, Gwendolyn Sneed O’Neal, Zai-Chih Lee, and Yen-Hsun Chen

The 2009 International Workshop on Social Networks Mining and Analysis
for Business Applications (SNMABA 2009)

Social Networks Mining and Analysis for Business Applications I

Ego-centric Network Sampling in Viral Marketing Applications ........................................777
Huaiyu (Harry) Ma, Steven Gustafson, Abha Moitra, and David Bracewell

Integration of User Experiences to Advancement
of B2B-Software-on-Demand Systems ...........................................................................783
Eva-Maria Schwartz
Application of New A Priori Algorithm MDNC to Exchange Traded Fund .................................................. 787
   Huang Chiung-Fen, Tsai Wen-Chih, and Chen An-Pin
Enhancing Airline Customer Relationship Management Data by Inferring Ties between Passengers ........................................................................................................ 795
   Michael Farrugia and Aaron Quigley

Social Networks Mining and Analysis for Business Applications II

The Benefits of Synchronized Genuine Smiles in Face-to-Face Service Encounters .......................................................................................................................... 801
   Kyunghee Kim, Micah Eckhardt, Nandi Bugg, and Rosalind W. Picard
A Proposal of Discovering User Interest by Support Vector Machine and Decision Tree on Document Classification ......................................................................................... 809
   Loc Nguyen
Analyzing Multi-source Social Data for Extracting and Mining Social Networks ................................................................................................................... 815
   I-Hsien Ting, Hui-Ju Wu, and Pei-Shan Chang

Social Networks Mining and Analysis for Business Applications III

A Study of Co-relational Personalities of the Social Network in Organization ........................................................................................................... 821
   Wei-Lun Chang and Sian-Ting Lin
Information Retrieval in Wikis Using an Ontology ................................................................................................. 826
   Carlos Miguel Tobar, Alessandro Santos Germer, Juan Manuel Adán-Coello, and Ricardo Luis de Freitas
The Effect of Network Position and Relationship Quality on Organizational Performance--The ABW Family ........................................................................ 832
   Ting-Lin Lee and Chih-Wei Lin

The 2009 International Workshop on Social Behavior in Music (SBM 2009)

Concepts, Technology, and Assessment of the Social Music Game ‘Sync-in-Team’ .......................................................................................................................... 837
   Marc Leman, Michiel Demey, Micheline Lesaffre, Leon van Noorden, and Dirk Moelants
Toward a Real-Time Automated Measure of Empathy and Dominance ........................................................................ 843
   Giovanna Varni, Antonio Camurri, Paolo Coletta, and Gualtiero Volpe
Reinforcement Learning of Listener Response for Mood Classification of Audio ........................................................................................................ 849
   Jack Stockholm and Philippe Pasquier
Dynamic Social Interaction in a Collective Mobile Music Performance ............................................................................... 854
   Koray Tahiroğlu
NetBeat and Net4Tet--Networked Performance Instruments for Electroacoustic Music Students ........................................ 860
   Arne Eigenfeldt
The 2009 International Workshop on Social Computing in Education (WSCE 2009)

Social Computing in Education I

Sharing Application Sessions for Peer-to-Peer Learning ................................................................. 862
Oscar Ardaiz, Luis Manuel Diaz de Cerio, Jose Andres Del Campo, and Ruben Mondejar

Web2.0 Tools to Support the Instructional Method “Thinking Actively in a Creative Environment” ................................................................................................................................. 868
Oscar Ardaiz Villanueva, Xabier Nicuesa Chacón, Oscar Brene Artazcoz, María Luisa Sanz de Acedo Lizarraga, and María Teresa Sanz de Acedo Baquedano

Approach for Name Ambiguity Problem Using a Multiple-Layer Clustering ............................................ 874
Wenrong Jiang, Anbao Wang, Cuihong Wu, Jian Chen, and Jihong Yan

Let’s Meet: Integrating Social and Learning Worlds ........................................................................ 879
Melody Siadaty, Dragan Gasevic, and Marek Hatala

Social Computing in Education II

A Decision Support System for Institutional Research Management in Higher Education: Data Mining to Determine Research Focus, Intensity and Synergy ................................................................. 885
Kobus Ehlers, Malan Joubert, Johann Kinghorn, and Arnold van Zyl

Online Presence in Adaptive Learning on the Social Semantic Web ........................................................................ 891
Jelena Jovanović, Dragan Gašević, Milan Stanković, Zoran Jeremić, and Melody Siadaty

Design of a Platform of Popular Science Education Based on Social Computing ................................................................. 897
Wang Fang and Mo Qian

Social Computing in Education III

Spurring Design Thinking through Educational Weblogging ................................................................. 903
Justus Bross, Ahmet Emre Acar, Patrick Schilf, and Christoph Meinel

Designing to Attract Participation in a Niche Community for Women in Science & Engineering ................................................................. 909
Zina Sahib and Julita Vassileva

SCI: Towards a Social Collaborative Integrated Development Environment ............................................. 915
Hani Bani-Salameh, Clinton Jeffery, and Jafar Al-Gharaibeh

An Empirical Study of Research Collaboration Using Social Network Analysis ........................................ 921
Yu-Ling Luo and Chia-Hao Hsu
Security and Privacy in Online Social Networking II

Visible Flows: Contextual Integrity and the Design of Privacy Mechanisms on Social Network Sites ................................................................. 985
  Heather Richter Lipford, Gordon Hull, Celine Latulipe, Andrew Besmer, and Jason Watson
Examining the Shifting Nature of Privacy, Identities, and Impression Management with Web 2.0 ...................................................................................................................................................................................................................................................... 990
  Kirstie Hawkey
Trust Inference in Complex Trust-Oriented Social Networks ................................................................................................................................................................................................................................................................................................. 996
  Guanfeng Liu, Yan Wang, and Mehmet Orgun

Security and Privacy in Online Social Networking III

Security and Trust through Electronic Social Network-Based Interactions ............................................................................................................................................................................................................................................................................... 1002
  Patrik Bichsel, Samuel Müller, Franz-Stefan Preiss, Dieter Sommer, and Mario Verdicchio
Witness-Based Collusion and Trust-Aware Societies .................................................................................................................................................................................................................................................................................. 1008
  Amirali Salehi-Abari and Tony White
Enabling Privacy as a Fundamental Construct for Social Networks ........................................................................................................................................................................................................................................................................ 1015
  E. Michael Maximilien, Tyrone Grandison, Kun Liu, Tony Sun, Dwayne Richardson,
  and Sherry Guo

The 2009 International Workshop on Social Mobile Web (SMW 2009)

Social Mobile Web I

Automated Murmurs: The Social Mobile Tourist Application ........................................................................................................................................................................................................................................................................ 1021
  Jill Freyne, Adam J. Brennan, Barry Smyth, Daragh Byrne, Alan F. Smeaton,
  and Garth J.F. Jones
The Circles of Latitude: Adoption and Usage of Location Tracking in Online Social Networking ............................................................................................................................................................................................................................................................................... 1027
  Xinru Page and Alfred Kobsa
Quantifying Reciprocity in Social Networks ........................................................................................................................................................................................................................................................................................................ 1031
  Huiqi Zhang, Ram Dantu, and Joao Cangussu

Social Mobile Web II

Solutions to Security and Privacy Issues in Mobile Social Networking ........................................................................................................................................................................................................................................................................ 1036
  Aaron Beach, Mike Gartrell, and Richard Han
Where Information Searches for You: The Visible Past Ubiquitous Knowledge Environment for Digital Humanities ........................................................................................................................................................................................................................................................................ 1043
  Sorin Adam Matei, Eric Wernert, and Travis Faas
Has Anyone Seen My Goose? Social Network Services in Developing Regions ........................................................................................................................................................................................................................................................................ 1048
  Narseo Vallina-Rodriguez, Pan Hui, and Jon Crowcroft
Social Mobile Web III

Information Technology Capabilities for Digital Social Networks ...............................................................1054

Camille Grange and Izak Benbasat

Social Tagging in Query Expansion: A New Way for Personalized Web Search ..............................................................1060

Claudio Biancalana and Alessandro Micarelli

Time Critical Content Delivery Using Predictable Patterns in Mobile Social Networks .................................................................1066

Fawad Nazir, Jianhua Ma, and Aruna Seneviratne

Social Mobile Web IV

Information Flow and Search in Unstructured Keyword Based Social Networks .................................................................1074

Ankush Garg, Prantik Bhattacharyya, Charles U. Martel, and S. Felix Wu

Ubiquitous Monitoring and Human Behaviour in Intelligent Pervasive Spaces .................................................................1082

Stuart Moran and Keiichi Nakata

The Geolocation of Web Logs from Textual Clues .................................................................................................1088

Clayton Fink, Christine Piatko, James Mayfield, Danielle Chou, Tim Finin, and Justin Martineau

The 2009 International Workshop on Leveraging Social Patterns for Security, Privacy, and Network Architectures (SP4SPNA 2009)

Leveraging Social Patterns I

Identifying Connectors and Communities: Understanding Their Impacts on the Performance of a DTN Publish/Subscribe System .................................................................1093

M. Chuah and Alexandra Coman

Using Converging Technology to Bring Social Networking to Commerce .................................................................1099

Colin Pattinson

Real World Routing Using Virtual World Information .................................................................................................1103

Pan Hui and Nishanth Sastry

Socially Enhanced Network Address Translation .................................................................................................1109

Alexis Malozemoff and Muthucumaru Maheswaran

Leveraging Social Patterns II

Diverse Routing: Exploiting Social Behavior for Routing in Delay-Tolerant Networks .................................................................1115

Tong Zhou, Romit Roy Choudhury, and Krishnendu Chakrabarty

A Network-Aware Distributed Membership Protocol for Collaborative Defense .................................................................................................1123

David Zage, Carl Livadas, and Eve M. Schooler
Role of Game Models in Social Networks .................................................................1131
   Y.B. Reddy

Social Networks’ XSS Worms ..................................................................................1137
   Mohammad Reza Faghani and Hossein Saidi

Delivery Rate and Routing Overhead Analysis with Salvage in Collaborative
On-Line Game Playing ...............................................................................................1142
   Miao Wang and Xiling Luo

Social Area Networks: Data Networking of the People, by the People, for
the People ..................................................................................................................1148
   Nadav Aharony, David P. Reed, and Andrew Lippman

The 2009 International Workshop on Social Intelligence in Applied Gaming (SIAG 2009)

Social Intelligence in Applied Gaming I

Satisficing the Masses: Applying Game Theory to Large-Scale, Democratic
Decision Problems ....................................................................................................1156
   Kshanti A Greene, Joseph M. Kniss, George F. Luger, and Carl R. Stern

Constructing a Virtual World as a Research Tool: Lessons Learned from
the First Iteration in the Development of Greenland .............................................1163
   Travis L. Ross

Application and Evaluation of Analytic Gaming .........................................................1169
   Roderick M. Riensche, Louis M. Martucci, Jean C. Scholtz, and Mark A. Whiting

Avatars in Analytical Gaming ..................................................................................1174
   Andrew J. Cowell and Amanda K. Cowell

ASC: A Proposed Architecture for Computing a Social Capital Gaming Metric ..........1180
   Colleen L. Phillips, K. Brock Stitts, and Norman D. Geddes

Social Intelligence in Applied Gaming II

Validation of Sociocultural Models and Meta-Models via Serious Games ..................1188
   K. Brock Stitts, Colleen L. Phillips, and Norman D. Geddes

Gaming to Predict Human Responses to Mass Casualty Events: An Approach
for Quick Look Tools for Pandemic Influenza .......................................................1194
   Robert T. Brigantic, George A. Muller, Aimee E. Taylor, and Anthony F. Papatyi

Inferring Player Rating from Performance Data in Massively Multiplayer
Online Role-Playing Games (MMORPGs) .................................................................1199
   Kyong Jin Shim, Muhammad Aurangzeb Ahmad, Nishith Pathak, and Jaideep Srivastava

Mathematical Modeling of Social Games ................................................................1205
   Kam Tong Chan, Irwin King, and Man-Ching Yuen

Author Index - Volume 4
