Contents

Introduction .................................................................................................................. iii

Sponsors ....................................................................................................................... iii

SCC 2008 Organizing Committee ................................................................................. iv

SCC 2008 International Scientific Committee ............................................................. iv

Section 1: Architectural and Precast Concrete

Relationship Between SCC Specification and Casting Conditions
for Architectural SCC and the Effect on Superficial Defects ........................................... 3
  A. Pacios, D. González, J.M. Escrivá, and V. Climent

Self-Compacting Architectural Concrete – Practical Remarks ..................................... 9
  Krzysztof Kuniczuk

Long Term Behavior of SCC Precast Members ............................................................. 16
  Franco Di Fabio, Dante Galeota, Matteo Maurizio Giammatteo, and Amedeo Gregori

SCC Compressive Strength Variation in Precast Beams and Columns .......................... 23
  Daniel Hastenpflug and Wellington Longuini Repett

Self-Consolidating Concrete for R/C Precast Elements in Romania ............................. 29
  Adrian Ioani, Polidor Bratu, and Henriette Szilagyi

European Experiences with Self-Compacting Concrete in Precast Concrete Industry .......... 35
  Klaus Juvas

Applications of High Strength SCC in Building Construction ................................. 40
  A. Gregori, R. Marino, A. Zagaglia, M. Drago, and G. Bason

Section 2: Case Studies

How To Increase the Market of Ready Mixed SCC –
Experiences from Nordic Countries ................................................................................. 49
  Mats Emborg

Online Measurement of Air Content in Fresh SCC ................................................. 59
  Aulis Kappi and Erik Nordenswan

Pump Application for Self-Compacting Concrete under Extreme Conditions ............. 64
  Harald Beitzel and Marc Beitzel

SCC Technology and Concrete Manufacturers’ Role ................................................. 70
  Michael Khrapko
Successful In-Situ Casting With SCC – From an Economical and Rheological Point of View .............................................. 74
Lars N. Thrane, Claus V. Nielsen, Claus Pade, Mette Glavind, and Jørgen Schou

Measurements During Concrete Processing in Central Mixed Concrete Plants ......................................................... 80
Bogdan Cazacliu, Nicolas Roquet, and Eric Brunquet

Evaluations of Self-Consolidating Concrete Using West Virginia Aggregates .......................................................... 85
Arka Bhattacharya, Indrajit Ray, and Julio F. Davalos

Use of Self-Consolidating Concrete for Bridge Repairs .......................................................... 91
Melissa Titherington and Hannah Schell

The Application of SCC in Taiwan .................................................................................................................. 98

Industrialized Construction: Benefits Using SCC and Innovative Production Methods ..................................... 103
Peter Simonsson and Mats Emborg

Damming the Dam ................................................................................................................................. 109
Campbell Robertson

SCC as Mass Concrete with Blast Furnace Slag Cement .................................................................................. 115
Ariel Goldman and Jeshayahu Sokal

Behavior of Self-Consolidating Concrete at Cryogenic Temperatures ......................................................... 120
Caroline Talbot

In Situ Quality Control of Self-Compacting Concrete .................................................................................. 125
Sara Cattaneo, Francesca Giussani, and Franco Mola

Experiences with SCC Mixes Used for Precast Elements and Field Applications in Slovenia ................................. 132
Zvonko Cotič, Karmen Koglot, Roko Žarnić, and Violeta Bokan Bosiljkov

Testing the Theory .......................................................................................................................................... 137
Campbell Robertson

Specification and Compliance Criteria for SCC – The Norwegian Procedure .................................................. 143
Tor Arne Hammer

Section 3: Chemical Admixtures

Development of New Superplasticizer and Its Application in Self-Consolidating Concrete ................................. 151
Daisuke Hamada, Toshimasa Hamai, Masaaki Shimoda, and Hiromichi Takahashi

Polycarboxylate Admixture Technology for Precast Self-Consolidating Concrete .............................................. 157
Viswanath Mahadevan
A New Slump-Loss-Controlling Agent without Affecting Early Strength Properties .............................. 163
Frank Göller, Stefan Dikty, and Tatsuo Izumi

The Next Generation of High-Range Water-Reducers for Self-Consolidating Concrete Applications .................. 169
Joseph A. Daczko

Development of Advanced Superplasticizer for Self-Consolidating 100-150MPA High Strength Concrete and Application to High Rise Buildings .................. 175
Kenro Mitsui, Masaro Kojima, and Mitsuo Kinoshita

Effect of Comb-Type Copolymer with Different Side Chain Lengths on the Rheological Performance of Cement-Active Mineral Admixture .................................................... 183
Wang Dongmin, Xiong Weifeng, Wu Zengli, ZuoYanfeng, and Wang Zhenghua

Re-Use of GRP Industrial By-Product as Filler for SCC .......................................................... 190
Francesca Tittarelli and Giacomo Moriconi

Study of Fresh Properties of High Strength SCC Using Chemical Admixture with Different Molecule Structures ................................................................. 196
Kaname Saitoh, Hiromi Fujiwara, Masanori Maruoka, and Yasuto Yamanash

Effect of the Cement Admixture Interaction on the Workability Retention from the Aqueous and Solid Phase Study ............................................................ 203
M. Sánchez, M.C. Alonso, B. Manzanedo, and A. Pacios

Section 4: Durability

A Rapid Method for Determination of Chloride Migration Coefficient of Concrete Using Electrical Field .......................................................... 211
C.C. Yang and S.C. Chiang

Applicability of Durability Requirements of the European Standard EN 206-1 to Self-Compacting Concrete ................................................................. 217
Katrien Audenaert and Geert De Schutter

Influence of Wet Curing Period on Salt Frost Scaling Resistance of SCC with Limestone Filler ................................................................. 223
Violeta Bokan Bosiljkov, David Duh, and Roko Žarnić

Durability of Self-Consolidating Concrete Exposed To Aggressive Natural Atmospheres ................................................................. 228
M. Sánchez, M.C. Alonso, and B. Barragán

Influence of Alkali Sulfate on Superplasticizer Performance in Cement Paste ................................................................. 234
Saksit Plang-ngern and Wanjana Wannaphahoun
Section 5: Emerging Technologies

Influence of Cement Composition and Admixture Dosage on Properties of Rapid-Setting SCC for Repair Applications – Lessons Learned ........................................... 243
Prashant V. Ram and Jan Olek

Curling of Self-Leveling Screeds ................................................................. 250
Jean Ambroise, Tina Le Bihan, Jean-François Georgin, and Jean Péra

SCC for Concrete Pavement Repair ............................................................ 257
Sherif Yehia, Osama Abudayyeh, Ammar Zalt, and Joseph Barbera

Superlightweight Self Compacting Concrete ........................................... 263
Rudolf Hela and Michala Hubertova

Comparison of Workability and Mechanical Properties of Normal and Lightweight SCCs with and without Steel Fibers ........................................... 269
M.A. Tasdemir, H.N. Atahan, I. Gokalp, and M. Yerlikaya

Aggregate Collision and Particle-Fluid Model for Highly Flowable Mortar ................................................................. 275
Gang Lu and Kejin Wang

Self-Consolidating Pervious Concrete ....................................................... 282
John T. Kevern, Kejin Wang, and Vernon R. Schaefer

FHWA's Perspective on the Progress of SCC Applications ....................... 288
M. Myint Lwin

Section 6: Formwork Pressure

Modeling Formwork Pressure of SCC ......................................................... 295
David A. Lange, Benjamin Birch, Jacob Henschen, Yi-Shi Liu,
Fernando Tejeda-Dominguez, and Leslie J. Struble

The Influence of Workability Loss and Thixotropy on Formwork Pressure in Self-Compacting Concrete Containing Stabilizers ................................. 301
Sonja Oesterheld, Florian V. Mueller, and Olafur H. Wallevik

Test Methods to Evaluate Form Pressure of SCC ...................................... 308
K.H. Khayat, A. Omran, S. Neji, T.P. Billberg, and A. Yahia

Prediction Model for SCC Formwork Pressure ......................................... 315
Seung Hee Kwon and Surendra P. Shah

Fresh Concrete Pressure of Self-Compacting Concrete on a Vertical Formwork ................................................................. 324
Marc Beitzel, Harald Beitzel, and Harald S. Müller

Residential Construction Based on Integral Formworks .......................... 330
Pere Borralleras Mas

The Use of Methylcellulose-Based Viscosity Modifying Agents for Self-Compacting Concrete ................................................................. 335
Andreas Leemann, Cathleen Hoffmann, Frank Winnefeld, Marc Schmitz, and Roland Bayer
Section 7: Fiber-Reinforced SCC

Effect of Fine to Coarse Aggregate Ratio on Workability and Fracture Properties of Steel Fiber Reinforced Self-Consolidating Concrete .................................................. 343
  Mert Yucel Yardimcia, Bulent Baradan, and Mehmet Ali Tasdemir

Fiber Reinforced Self-Compacting Concrete with High Wear Resistance ........................................ 349
  Guido Krage and Olafur H. Wallevik

Fiber Reinforced Self-Compacting Concrete for Structural Applications .......................................... 354
  A. Gregori, R. Marino, C. Pistolesi, M. Bovassi, and A. Lolli

Effect of Fiber Type on Workability and Mechanical Properties of SCC .......................................... 361
  K.H. Khayat, P. Ghoddousi, and F. Kassimi

Effect of Polypropylene and Steel Fibers on Properties of Self-Compacting Concrete .................... 367
  H. Yildirim, B. Sertbas, V. Berbergil, and A. Naaman

Shrinkage Cracking of Steel Fibre Reinforced SCC Overlays ...................................................... 373
  Jonas Carlswärd and Mats Emborg

Section 8: Hydration

Hydration, Microstructure, Transport Properties and Durability of Self-Compacting Concrete ............. 381
  Geert De Schutter

Impact of Aluminate Ions on the Properties of Saltstone Grout Mixes ........................................... 387
  J.R. Harbour, T.B. Edwards, E.K. Hansen, and V.J. Williams

Effect of Nano Particles in New Generation of Concretes, SCC .................................................... 392
  Ali Akbar Maghsoudi, Mohammad Jalal Soheil, and Abbas Darbhenzi

DR-FTIR Method for the Study of Early Hydration of Cement ....................................................... 399
  Rikard Ylmén, Kristian Larsson, Ulf Jäglid, Itai Panas, and Britt-Marie Steenari

Nano Scale Characterization of Self-Consolidating Concrete ....................................................... 406
  A.K. Reinhardt, M. Tehrani, M. Al-Haik, and M.M. Reda Taha

Impact of Calcium Carbonate Morphology on Self-Compacting Concrete Performance .................... 412
  A.H. Asbridge and C. Paynter
## Section 9: Mechanical Properties — Modeling

Use of Different Prediction Models to Compare the Mechanical Properties of Self Compacting Concrete and Conventional Concrete ........................................ 421
  Ana Carolina Marques, Luciana Tiemi Kataoka, Marcelo Augusto da Silva Machado, André Luiz Nonato Ferraz, Mônica Pinto Barbosa, and Túlio Nogueira Bittencourt

Post-Peak Response of Confined SCC ................................................................. 427
  Bernardino Chiaia, Alessandro P. Fantilli, and Paolo Vallini

Bond Strength of Reinforcing Bars in Self-Compacting Concrete:
Experimental Determination .............................................................................. 433
  Pieter Desnerck, Geert De Schutter, and Luc Tuerwe

Aligning Fibers Along the Flow Direction for High Mechanical Performance
of Self Consolidating SFRC .................................................................................. 439
  Liberato Ferrara, Marco di Prisco, and Rabinder S. Khurana

Mechanical Properties of Self-Compacting Concrete at High Temperature and After Cooling ...... 445
  Patrick Bamonte, Roberto Felicetti, and Pietro G. Gambarova

Bond Strength of Self Consolidating Concrete .................................................... 451
  Sherif Yehia, Osama Abudayyeh, Mike Maurovich, and Ammar Zalt

Influence of Elevated Temperatures on the Mechanical Properties
of Self-Consolidating Concrete (SCC) Containing Pozzolanic Materials .................. 457
  Ali Akbar Ramezanianpour and Reza Esmaili

## Section 10: Mix Design

Rheology of Fiber Reinforced Cementitious Materials: Classification and Prediction .............. 465
  Laetitia Martinie, Pierre Rossi, and Nicolas Roussel

Mix-Design Optimization of Steel Fiber Reinforced SCC ........................................ 470
  Liberato Ferrara and Nilufer Ozyurt

Evaluation of SCC Mix Design for Moderately- and Heavily-Reinforced Members Using West Virginia Aggregates .............................................................. 476
  Joseph G. Sweet and Roger H.L. Chen

Effect of Aggregate Type on Modulus of Elasticity of High Strength Self Consolidating Concretes .......................................................... 482
  H. Yildirim, A. Karadag, and H.N. Atahan

Influence of Silt Content of Fine Aggregate on the Properties of Concrete .......................... 488
  S.W. Cho and W.C. Liu
Wet Particle Packing Analysed with the Krieger-Dougherty Equation ................................. 494
*Klaartje De Weerdt*

Mix Design of Self-Compacting Concrete – From the Laboratory to the Concrete Plant .......... 500
*Andreas Leemann*

Performance of SCC Obtained with Different Mortar Contents ....................................... 505
*Paulo Jorge M. Manuel, Angela Masuero, and Denise Dal Molin*

**Section 11: Rheology**

Self-Compactability of Fresh Concrete in Terms of Dispersion and
Coagulation of Particles of Cement Subject to Pumping .................................................. 513
*Masahiro Ouchi and Jiro Sakue*

Impact of Fine Aggregate Volume on Rheology of Mortar for
Self Compacting Concrete (SCC) ....................................................................................... 518
*Subrato Chowdhury*

Production Related Aspects of Self-Compacting Concrete ............................................. 523
*B. Barragán, R. Zerbino, T. Garcia, L. Agulló, and R. Gettu*

Influence of Hauling Time on Fresh Performance of Self Consolidating Concretes .......... 529
*Nader Ghafoori and Hamidou Diawara*

A Novel Field Instrument to Measure Rheological Properties of Self-Compacting Concrete .... 534
*Olafur H. Wallevik and Bjorn Hjartarson*

Sensitivity of SCC Mortar Mixtures to Cement Variations ............................................. 540
*Sandra Nunes, Paula Milheiro Oliveira, Joana Sousa Coutinho, and Joaquim Figueiras*

Effect of the Temperature and Waiting Conditions on the
Rheological Parameters of Self-Compacting Concrete .................................................. 546
*Joana Roncero, Bryan Barragán, and Raúl Zerbino*

**Section 12: Rheology and Workability**

Determination of Rheological Parameters of Self-Consolidating Concrete
Using Computational Fluid Dynamics ............................................................................. 555
*Stephan Uebachs and Wolfgang Brameshuber*

Particulate Reference Materials for Rheometers .............................................................. 561
*Chiara F. Ferraris, Min-Hong Zhang, Huaning Zhu, and Nicos Martys*

Use of Viscosity-Modifying Admixtures to Enhance Robustness of SCC ....................... 566
*Peter Billberg and Kamal H. Khayat*

How to Obtain a Self Compacting Concrete with No Filler Addition
by Studying Paste Rheology ......................................................................................... 572
*Faber Fabbris*
Particle Dependency of Self-Compacting Concrete Rheological Properties on the Aggregate Volume Fraction: A Change of Scale Approach .............................................. 578
  X. Chateau and K.L. Trung

Influence of Cement Composition on Concrete Rheology ................................................. 584
  Hedda Vikan and Knut O. Kjellsen

Method of Retrieving the Herschel-Bulkley Parameters When Using the (Wide-Gap) Coaxial Cylinders Viscometer .............................................................. 590
  Jon E. Wallevik

Tuning Properties of Paste Layers ...................................................................................... 596
  Mario R. de Rooij and Alex L.A. Fraaij

Smart Dynamic Concrete: New Approach for the Ready-Mixed Industry ................................ 602
  Joana Roncero, Mario Corradi, Rabinder S. Khurana, Roberta Magarotto, and Sandro Moro

Rheological Evaluation of Soy Methyl-Ester Polystyrene (SME-PS) Blends in Cement Pastes ............................................................................................................. 608
  Kevin C. Coates, Marika C. Santagata, Samia Mohtar, Bernard Y. Tao, and Jason Weiss

Effects of Solids Packing Density on Rheology of SCC-Equivalent Mortar .......................... 614
  Wilson W. S. Fung, Ivan Y. T. Ng, Henry H. C. Wong, and Albert K. H. Kwan

Effect of Coarse Particle Volume Fraction on the Yield Stress and Thixotropy of SCC ............ 620
  F. Mahaut, S. Mokéddem, X. Chateau, N. Roussel, and G. Ovarlez

Self-Consolidating Concrete for Floor Slab and Screed Applications .................................... 626
  Stephan Uebachs and Wolfgang Brameshuber

Full Scale Pumping Tests on SCC: Test Description and Results ........................................ 631
  Dimitri Feys, Ronny Verhoeven, and Geert De Schutter

Full Scale Pumping Tests on SCC: Application of the Modified Hattori-Izumi Theory ........ 637
  Dimitri Feys, Ronny Verhoeven, and Geert De Schutter

Cement-Admixture Interaction – The Effect of Different Cement Deliveries on Rheology, Workability and Hydration of Mortar and SCC ............................................. 642
  Stefan Kubens and Olafur H. Wallevik

Evaluation of the Pressure-Loss-Causing Mechanism of Self-Compacting Concrete ............ 648
  Masanori Maruoka, Hiromi Fujiwara, Erika Ogura, and Yasuto Yamanashi

The Thixometer: A Simple Test Allowing for the Measurement of the Thixotropic Behavior of SCC ................................................................. 653
  Jean Lett, Guillaume Ovarlez, and Nicolas Roussel

Effects of Coarse Aggregate Grading on Performance of Self-Consolidating Concrete ............ 658
  Ivan Y. T. Ng, Wilson W. S. Fung, and Albert K. H. Kwan
Section 12: Rheology and Workability (continued)

Rheological Description of Optimized Paste for SCC ................................. 664
*Steffen Grünewald and Joost C. Walraven*

Influence of Demoulding Oil on the Rheological Properties of Fresh SCC .................. 670
*Dimitri Feys, Ronny Verhoeven, and Geert De Schutter*

Research on Flocculation of Cement Particles in Water ................................. 675
*Yanfeng Zuo and Dongmin Wang*

Section 13: Segregation

Modeling Segregation of SCC ........................................................................ 685
*Lin Shen, Leslie Struble, and David Lange*

Development of Test Method to Evaluate Dynamic Segregation Resistance of Self-Compacting Concrete ................................................................. 691
*Zhuguo Li and Minoru Iidaka*

Static and Dynamic Yield Stress Measurements of SCC .................................... 698
*Eric P. Koehler and David W. Fowler*

A Rapid Evaluation of Stability of Self-Consolidating Concrete ................................ 704
*Van Bui and Emmanuel Attiogbe*

Measuring Dynamic Segregation of SCC .......................................................... 710
*Lin Shen, Leslie Struble, and David Lange*

Predictive Analysis of Components to Obtain an Oriented Robustness ..................... 714
*Marco Francini*

Section 14: Structural Behavior

The Transfer of Shear Forces on the Surface of Self-Compacting Concrete .................. 723
*Steffen Grünewald and Wim Bennenk*

Experimental and F.E Modelling of Prestressed SCC-T-Beams ............................ 729
*A. A. Maghsoudi and M. Farahbakhsh*

Bond Strength in Limestone Self-Compacting Concrete .......................................... 736
*Sara Cattaneo, Giovanni Muciaccia, and Gianpaolo Rosati*

Behavior of Self-Compacting R.C. Beams ......................................................... 742
*Luigi Biolzi, Sara Cattaneo, and Franco Mola*

Structural Behavior of SCC Prestressed Girders .................................................. 749
*Young Hoon Kim, Mary Beth D. Hueste, and David Trejo*

Research into Properties of Self-Compacting Concrete Beams under Combined Actions .... 755
*Yu Zhiwu, Liu Xiaojie, and Chen Xuewen*
