TABLE OF CONTENTS

VOLUME 1

Hullform Surface Models: Guidelines and Tolerances ................................................................. 1
Michael A. Polini

Prediction of Ship Powering Performance of Large Container Ships Based on the Method of Artificial Neural Network ................................................................. 46
Y T Liu, N Ma, C J Yang

Semi Automatic Failure Analysis Based on Simulation Models .................................................. 78
Andreas Uhlig

Feature Modeling and Simulation-driven Design for Faster Processes and Greener Products ................................................................. 117
Claus Abt, Mattia Brenner, Stefan Harries

Reducing Time and Effort for Structural Design and Assessment ........................................... 126
R Doig, M Bohm, J Stammer, P Hernandez, S Griesch, Wadan Yards, D Kohn

Automatic Generation of Fatigue Analysis Model Reflected the Feature Geometry of the Typical Structural Parts ................................................................. 130
Seong-Jin Yoo, Won-Jun Lee, Heung-Won Suh

Utilization of 3D-CAD System at Early Design Stage and Powerful Interface Between 3D-CAD and FE-Analysis ................................................................. 163
Kohta Shibasaki, Yutaka Nishimura

Data Modelling - Its Use and Contribution to Ship Design, Manufacture, Build and Operation ........................................................................................................ 169
John Martin

The Benefits of Applying Architectural Modelling to the Ship Design and Build Process ................................................................. 179
Simon Jones, Ralph Hudson

How to Make 3D Accessible to the Customer ............................................................................. 187
Niclas Kling

Structural Drawings with SmartMarine® 3D ............................................................................. 215
Tom Szoka, Jinsup Cheong

Application of Knowledge-Based Engineering Methods for Hull Structural Member Design ........................................................................................................ 249
Jinfeng Chen, Hezhen Yang, Deyu Wang

Enterprise Data-Reuse and Experienced Ship Design for Shipbuilding, Marine and Offshore Industries ..................................................................................... 289
Yann Limon-Duparcmeur, Cécile M. Turnbull, Mike Polini

Using CAD/CAM Technology More Efficiently in Chinese Shipyards ........................................ 324
Guangwu Liu, Xinhua Zhang

Study of Three Dimensional Coordinate Measuring Methods for Production of Ship Hull Blocks ........................................................................................................ 333
Dianzhen Zhang

Development of Accuracy Measurement Method for Shipbuilding Block Using Laser Scanners ........................................................................................................ 352
Kazuo Hiekata

Researches on Load-out Technological Equipment in Super Block Construction Method ........................................................................................................ 384
Yanbin Wu

Computation and Simulation of the Launching for Land Shipbuilding ........................................ 404
Mingxia Zhang, Yan Lin, Kun Lei, Chengmeng Sun, Pingle Qin, Zhuoshang Ji

Study on the Process Optimization for Hull Block Assembly Based on Quantitative Analysis ........................................................................................................ 429
Ji Wang, Yujun Liu, Yanping Deng, Youle Wang

Max-Plus-Algebra Based Scheduling of a Ship Building Line .................................................................. 461
Hiroyuki Kajiwara, Yasuhiro Hitoi, Youichi Nakao

A Study on Evaluation and Improvement of Organizational Performance in Fabrication Shops ........................................................................................................ 500
Taiga Mitsuyuki

Productivity Extension Module for Ship Hull Construction Work-preparation Software based in AutoCAD platform ............................................................................. 540
Zhou Chi

Integrated Management of Ship Compartments .............................................................................. 545
Fernando Zurdo

Space Management as an Enabling Technique for the Development of Ships’ Arrangements Based on a Common Reference Model .............................................................................. 552
Ulf Eriksson, Mats Westenius, Leif Radj
g

Software Tools Enabling Design Optimisation of Mustering and Evacuation for Passenger Ships ........................................................................................................ 556
Pierre Berseneff, Jacques Huberty, Owe Langbeckerm, Jean-Jacques Maisonneuve, Sirehna Antti Metsä
3D Life Cycle Product Modelling from the First Feasibility Stage to Lifetime Information Management .................................................................................................................................................................................. 566
Rami Hirsimaki

Development of Design Process Simulator for the Ship Initial Design Stage .......................................................... 594
Kunihiro Hamada

VOLUME 2

Development of 3D Model Based Application for Creating Stability Documents Supporting Statutory Rules .............................................................. 657
Mitsuhiko Kidogawa, Taise Takamoto, Naoki Mizutani

Virtual Display of Ship Movements in Marine Environments ......................................................................................... 719
Peng Liu, Rongwu Yang, Jinsong Xu

Advanced Simulations for Ship Design and Redesign .............................................................................................. 724
Karsten Fach, Volker Bertram, Holger Jefferies

The Feasibility of Developing a Quiescent Period Prediction System in a Simulation Environment .............. 751
Paul Crossland

Study on the Dynamic Interference Detection and its Application to Ship Design and Building Simulation .......... 763
Naikun Wei, Rundang Yang, Dong Xu, Ziming Xie

A Procedure Model to Tap the Full Potential of Virtual Reality in the Maritime Industry ........................................................................................................ 767
Christian Nedess, Axel Friedewald, Christoph Schäfer

Astute Class Nuclear Submarine - The IT Solution .............................................................................................. 777
Dwane Wilson

Value Chain Integration - The Future for LNG? ................................................................................................... 787
Steve Gibbons

Exchange of Outfitting Data between Tribon and PDMS based on Neutral Formats ...................................... 791
Jinggao Li

Application of Rules for Quality Control of Product Model Data ................................................................................. 832
R. Bronsart, A. Geitmann

Geometric Constructions: The Next Level of Rule-based Design Automation .......................................................... 842
Kristin Cochran, Patrice Blanchard

Automatic Design for Pipe Arrangement Considering Valve Operationality .......................................................... 868
Hajime Kimura

A Best-of-Breed Approach to Marine Design Tools .......................................................................................... 918
Darren Larkins

Digital Convergence is Driving Interoperability Across Engineering Domains In the Marine Industries .......... 923
Neil McPhater

Production Design & Applications in Shipbuilding .............................................................................................. 931
Ioannis A. Mavrakis

Design and Implement of an Equilibrium-parameter Based Anti-sinking Assistant Decision System (EPBS) ........................................................................................................ 981
Qinqi Wei, Fenghui Wu, Pengan Xiao, Hongt ao Ma, Xi Chen

The Important Factors for the Implementation of Green Shipbuilding ................................................................. 999
Dapeng Lu

Early Stage Planning Support .............................................................................................................................. 1023
Kees Meijer, Jeroen Prayn, John Klooster

An Optimization Framework for the Design of Planing Craft ...................................................................................... 1028
A. F. Mohamad Ayob, T. Ray, W. F. Smith

New CAE Package For Propulsion Train Calculations .......................................................................................... 1058
Yuriy Batrak

Towards a Simulation Standard for the Virtual Ship .................................................................................................. 1114
Gary Henry

Virtual Reality System for Multilateral Cooperation in Shipbuilding ........................................................................ 1124
Hua Zhang, Zhenhai Liu, Jinsong Xu

A Fuzzy Metric for Assessing the Producibility of Straightening in Early Design ..................................................... 1132
Caprace Jean-David

The Use of Advanced Structural Analysis and Simulation Tools to Validate a New Independent LNG Tank Containment System ........................................................................................................ 1160
Regu Ramoo, Mohan Pathasarathy, Julien Santini, Thomas Lamb
Efficiency Analysis of Ship Design Projects Using Data Envelopment Analysis: A Benchmarking Exercise................................................................. 1213
S Navaneetha Krishnan, Seema Sharma, Kc Iyer

Integrating Simulation and Computer Aided Ship Design Software and Processes ................................................................. 1225
D. Andrews, L. Casarosa, R. Pawling

Deriving Parametric Models for Goal-based Design of Ship Concepts .................................................................................. 1289
Romanas Puisa, Dracos Vassalos

VOLUME 3

A Knowledge Retention System for Managing Risk Based Design Approval ................................................................. 1333
Clive Bright, Mark Wharton

CCS New Buckling Analysis System Based on CSR for Double Hull Oil Tankers ................................................................. 1360
Wei Zhou, Ying Hong, Feng Qian, Yexin Gu

Computer Aided Rule-Based Scantling Calculations of Ship Using Programming Tools ................................................................. 1366
P. Ramanaidu, P Shankar, P Patil, R Bhat, R Namdev, A Samanta

QSHIP: Advanced Use of Hydromechanics in Early Design Stage .................................................................................. 1373
Arno Bons

Parametric Design Rules Approach to Mass Customization .................................................................................. 1403
Richard Lee Storch, Sashi Komendur

Advancing Innovation in the Inland Shipping Sector by Means of a Rapid Conceptual Ship Design Model ................................................................. 1411
R. G. Hekkenberg

Modes of Integrated Collaborative Ship Design .................................................................................. 1436
Ian Whitfield, Alex Duffy

Virtual Integration Platform for Computational Fluid Dynamics .................................................................................. 1483
Wenjuan Wang, Alex Duffy, Ian Whitfield

The Technology of Manufacturing BOM Based on PDM in Shipbuilding .................................................................................. 1548
Xie Jing, Li Shiyun

Development of Production Materials Quantity System Using the Tribon M3 Model Data ................................................................. 1555
Yong-Tae Jeon, Young-Ho Kim, Heung-Won Suh

Research on the Production Planning and Control in Shipbuilding Engineering Based on the Supply Chain Management .................................................................................. 1587

Study on Location Management System of Steel-plate and Hull Parts in the Outside Area .................................................................................. 1612
Y. Sasaki, K. Murakwa, Y. Okshita

Simulation Model for Analysis of Flow of Steel in Shipbuilding Shipyards .................................................................................. 1637
Marta C. T. Reyes, Silvio E. G. Melo, Clarice T. S. Pinheiro

Based on the Dedicated Ship Design Software Systems of the Digital Shipbuilding Management .................................................................................. 1641
Jia Xu, Hai Wang

Reinhard Ahlers, Markus Lehne

Supporting Ship Life Cycle Management with Simplified CAD Data .................................................................................. 1670
Christian Cabos, Wiegand Grafe

State of the Art Inventory Life Cycle Support .................................................................................. 1678
Elena Morelo, Robert Hekkenberg

Integration of Application System Based on PDM in Shipbuilding .................................................................................. 1717
Chenggang Gong, Shiyun Li

A Neutral Framework for the Integration Of CAD In Product Model Lifecycle Systems .................................................................................. 1769
Augusto Gómez, Robert Penas, Luis Sánchez, Luis Pastor

Research on Meta-Synthesis Driving Engine Technology of Shipbuilding .................................................................................. 1777
Yu Wang, Jun Yan, Yu You, Shenghua Yao

Information Access and Reuse as a Business Benefit for Shipyards .................................................................................. 1780
David Thomson

Development of a Logic Based Product Lifecycle Management (PLM) Model for Shipbuilding Industry .................................................................................. 1819
Tae-Wan Kim

An Automatic Schedule Generation System of Outfitting Process in Shipbuilding .................................................................................. 1833
Yan Wei, Ubald Nienhuis
Managing a Single Source of Product Data Over a Ship’s Life: An Achievable Imperative for Modern Shipbuilding ......................................................................................................................................... 1842
Marc Donoghue

Research and Development of Shipbuilding Cost Accounting System based on Project Life Cycle ......................... 1890
Qinghe Cheng, Haijun Li, Qi Zhang

Development of Scheduling System for Piping Factory by the use of TOC and Production Model ......................... 1896
Kunihiro Hamada

Automation of Oil Rig Fabrication ................................................................................................................................... 1970
Oskar Lee, Kwok Lam
