# Table of Contents

1. Roman cement - key historic material to cover the exteriors of buildings  
   pp. 2 - 11

2. The influence of craftsmanship on the inner structures of lime plaster  
   K. Balksten, K. Klasén  
   pp. 12 - 19

3. A classification of structures and masonry for the adequate choice of repair  
   L. Binda, G. Cardani, A. Saisi  
   pp. 20 - 34

4. The role of mortar joints in the mechanical behaviour of masonry structures  
   L. Binda, C. Tedeschi, G. Cardani  
   pp. 35 - 46

5. A comparative study of mechanical and physical properties of mortars prepared using lime putties, sands and metakaolin from different sources  
   V. Bokan Bosiljkov, J. Valek  
   pp. 47 - 62

6. Compatibility of repair mortars at the archaeological site of Villa Domizia on Giannutri Island, Italy  
   A. Bonazza, C. Sabbioni, A. Sardella, O. Favoni, P. Rendini, R. Sabelli  
   pp. 63 - 72

7. Approach for compatible mortars for restoration purposes; stone reparations of the Roman amphitheatre of Arles (France)  
   P. Bromblet, G. Martinet, F. Martin  
   pp. 73 - 81

8. Microstructure and weathering mechanisms of natural cements used in the 19th century in the French Rhône-Alpes region  
   E. Cailleux, E. Marie-Victoire, D. Sommain, E. Brouard  
   pp. 82 - 93

9. Conservation of ancient mortars from Sagalassos - Turkey  
   J. Elsen, G. Mertens, P. Degryse, M. Waelkens  
   pp. 94 - 98
10. Resistance to salts of lime and pozzolan mortars
   P. Faria Rodrigues
   pp. 99 - 110

11. Compatibility of rendering systems with salt loaded ordinary
    masonry walls
   T. Diaz Gonçalves, J. Delgado Rodrigues
   pp. 111 - 122

12. Bridging theory and practice
   R. Hayen, K. Van Balen
   pp. 123 - 131

13. Historic trass - lime mortars with expansive reactions:
    characterization and repair strategies
   R.P.J. Van Hees, T.G. Nijland, J.A. Larbi, T.J. Wijffels, H. Brocken
   pp. 132 - 142

14. Challenges and perspectives of replacement mortars in architectural
    conservation
   F.M.A. Henriques
   pp. 143 - 161

15. Compressive and flexural strength testing of brick masonry panels
    constructed with two contrasting traditionally produced lime mortars
   J.J. Hughes, A.K. Taylor
   pp. 162 - 177

16. Lime mortar for renders: is there a relationship between finishing
    technique and properties? Preliminary results
   A. Jornet, M. Somaini, A. Romer
   pp. 178 - 186

17. A new freeze-thaw test method for mortars used in Nordic climates
   P. Kokko, M. Pentti
   pp. 187 - 195

18. Theory transformed in practice and the results from practice
    distorting theories. Experiences from masonry restoration at the fortress
    of Suomenlinna in Finland
   T. von Konow
   pp. 196 - 206

19. Investigations of soluble salt contents in modern hydraulic lime
    mortars - Test method and first results
   K. Kraus, K. Droll
   pp. 207 - 213

20. Condition investigations of rendered facades
   J. Lahdensivu
   pp. 214 - 223

21. Sub-hydraulic binders in historic mortars
   J.E. Lindqvist, S. Johansson
   pp. 224 - 230

22. The performance of a restoration plaster in the field: investigation
    and monitoring of two case studies
   B. Lubelli, R.P.J. van Hees, C.J.W.P. Groot
   pp. 231 - 241

23. Repair mortars for the conservation of cultural heritage: a multilayer
    render system with mass water-repelling to be applied in facings with
    high moisture and salts
   M.P. Luxán, F. Dorrego, J. Dorrego
   pp. 242 - 265
24. Preliminary evaluation of the freeze-thaw resistance of hydraulic lime mortars
   pp. 266 - 277

25. Reverse engineering: a proper methodology for compatible restoration of mortars
   A. Moropoulou, A. Bakolas, P. Moundoulas, E. Aggelakopoulou
   pp. 278 - 291

26. Design and manufacture of repair mortars for interventions on monuments and historical buildings
   I. Papayianni
   pp. 292 - 304

27. Characteristics of repair mortars for historic buildings concerning quantified hygroic requirements
   M. Rosário Veiga
   pp. 305 - 315

28. Monitoring of the moisture and salt load in restoration plasters in St.-Babara’s church in Culemborg
   M.M. Sanders, R.P.J. Van Hees
   pp. 316 - 327

29. Historic mortars revived; developing local materials and crafts for restoration
   E. Sandström Malinowski
   pp. 328 - 338

30. The role of compaction in the quality of repair mortars
   M. Stefanidou
   pp. 339 - 344

31. Optimised microstructure of calcium sulphate-based mortars for the restoration of historic masonry
   V. Tesch, B. Middendorf
   pp. 345 - 353

32. Key considerations in the development of ASTM standard specification for mortar for historic structures: materials, test procedures and properties
   M.L. Thomson, J.M. Wathne
   pp. 354 - 361

33. Development of lime-pozzolan-cement compositions for the repair and strengthening of historic structures
   E.E.E. Toumbakari, C.B. Malami, C.E. Adami, E.N. Vintzileou
   pp. 362 - 373

34. Tests on lime and metakaolinite mortars intended for application on historic buildings
   J. Válek, Z. Slízková
   pp. 374 - 381

35. Requirements for the choice of mortar and grouts for consolidation of three-leaf stone masonry walls
   pp. 382 - 397
