2009 20th IEEE International Symposium on Software Reliability Engineering

(ISSRE 2009)

Bengaluru-Mysuru, India
16 – 19 November 2009
20th International Symposium on Software Reliability Engineering

ISSRE 2009

Table of Contents

Preface
Organizing Committees
Program Committee
Industry, Steering, and Advisory Committees
Reviewers

Session 1.1: Reliability Modeling
A Complexity Reliability Model .................................................................1
Norm Schneidewind and Mike Hinchey
Wavelet-Based Approach for Estimating Software Reliability .......................11
Xiao Xiao and Tadashi Dohi
Estimating the Probability of Failure When Software Runs Are Dependent: An
Empirical Study ............................................................................................21
Katerina Goseva-Popstojanova and Margaret Hamill

Session 1.2: Runtime Monitoring, Verification, and Profiling
Applying the Composition Filter Model for Runtime Verification
of Multiple-Language Software ........................................................................31
Somayeh Malakuti, Christoph Bockisch, and Mehmet Aksit
Efficiently Extracting Operational Profiles from Execution Logs Using Suffix
Arrays ............................................................................................................41
Meiyappan Nagappan, Kesheng Wu, and Mladen A. Vouk
Optimal Adaptive System Health Monitoring and Diagnosis for Resource
Constrained Cyber-Physical Systems .................................................................51
Y. Zhang, I.-L. Yen, F. B. Bastani, A. T. Tai, and S. Chau
Session 1.3: Testing

Reducing Field Failures in System Configurable Software: Cost-Based Prioritization

Hema Srikanth, Myra B. Cohen, and Xiao Qu

Harnessing Web-Based Application Similarities to Aid in Regression Testing

Kinga Dobolyi and Westley Weimer

On the Effectiveness of Unit Test Automation at Microsoft

Laurie Williams, Gunnar Kudrjavets, and Nachiappan Nagappan

Session 2.1: Predicting Defects and Failures

Approximating Deployment Metrics to Predict Field Defects and Plan Corrective Maintenance Activities

Will Snipes, Brian Robinson, and Penelope Brooks

Variance Analysis in Software Fault Prediction Models

Yue Jiang, Jie Lin, Bojan Cukic, and Tim Menzies

Putting It All Together: Using Socio-technical Networks to Predict Failures

Christian Bird, Nachiappan Nagappan, Harald Gall, Brendan Murphy, and Premkumar Devanbu

Session 2.2: Security

Optimal Security Patch Release Timing under Non-homogeneous Vulnerability-Discovery Processes

Hiroyuki Okamura, Masataka Tokuzane, and Tadashi Dohi

Looking at Web Security Vulnerabilities from the Programming Language Perspective: A Field Study

Nuno Seixas, José Fonseca, Marco Vieira, and Henrique Madeira

Towards a Unifying Approach in Understanding Security Problems

Prasanth Anbalagan and Mladen Vouk

Session 2.3: Safety

Fault Tree Analysis of Software-Controlled Component Systems Based on Second-Order Probabilities

Marc Förster and Mario Trapp

Issues on the Design of Efficient Fail-Safe Fault Tolerance

Arshad Jhumka and Matt Leeke

Session 3.1: Fault Localization and Behavioral Compliance Checking

Insights on Fault Interference for Programs with Multiple Bugs

Vidroha Debroy and W. Eric Wong

Towards Behavioral Reflexion Models

Christopher Ackermann, Mikael Lindvall, and Rance Cleaveland
Session 3.2: Specifications and Patterns

Automated Identification of LTL Patterns in Natural Language Requirements ........................................185
  Allen P. Nikora and Galen Balcom
Event-Based Input Validation Using Design-by-Contract Patterns .................................................................195
  T. Tuglular, C. A. Muftuoglu, F. Belli, and M. Linschulte

Author Index
