Reviewers
Keynotes

Session 1A: Metrics and Measurement I

Improving the Accuracy of Software Effort Estimation Based on Multiple Least Square Regression Models by Estimation Error-Based Data Partitioning .........................................................3
  Yeong-Seok Seo, Kyung-A Yoon, and Doo-Hwan Bae
Hierarchical Understandability Assessment Model for Large-Scale OO System ........................................11
  Jimin Hwa, Sukhee Lee, and Yong Rae Kwon
On the Relationship between Different Size Measures in the Software Life Cycle .........................................................19
  Cigdem Gencel, Rogardt Heldal, and Kenneth Lind

Session 1B: Software Design I

Investigating the Effect of Refactoring on Software Testing Effort ........................................................................29
  Karim O. Elish and Mohammad Alshayeb
Extracting High-Level Functional Design from Software Requirements ........................................35
  Vibhu Saujanya Sharma, Santonu Sarkar, Kunal Verma, Arun Panayappan, and Alex Kass
Identifying Fragments to be Extracted from Long Methods .........................................................................43
  Limei Yang, Hui Liu, and Zhendong Niu
Session 1C: Verification and Validation I

A Graph Based Approach to Detecting Causes of Implied Scenarios under the Asynchronous and Synchronous Communication Styles ..........................................................53

In-Gwon Song, Sang-Uk Jeon, and Doo-Hwan Bae

Extracting Environmental Constraints to Make Reactive System Specifications Realizable ........................................................................................................61

Shigeki Hagihara, Yusuke Kitamura, Masaya Shimakawa, and Naoki Yonezaki

Monitoring Composite Services with Universal Modal Sequence Diagrams ...........................................69

Wenrui Li and Zhijian Wang

Session 2A: Requirements Engineering I

Critical Barriers for Offshore Software Development Outsourcing Vendors: A Systematic Literature Review ..................................................................................................79

Siffat Ullah Khan, Mahmood Niazi, and Rashid Ahmad

Re-defining the Requirements Engineering Process Improvement Model ..................................................87

Badariah Solemon, Shamsul Shahibuddin, and Abdul Azim Abd Ghani

Insights into Domain Knowledge Sharing in Software Development Practice in SMEs ..........................................................................................................................93

Jim Buchan, Christian Harsana Ekadhamwan, and Stephen G. MacDonell

Ziyad Alshaikh and Clive Boughton

Session 2B: Software Architecture

An Empirical Study of Software Architects' Concerns ..................................................................................111

Henrik Baerbak Christensen, Klaus Marius Hansen, and Kari Rye Schougaard

Attribute-Based Architecture Patterns for Lightweight Service-Oriented Architectures .............................................................................................................................119

Mikio Aoyama, Takashi Ikezaki, and Noboru Nakamichi

Tool Support for Component-Based Software Architectures ........................................................................127

Georg Buchgeher and Rainer Weinreich

Web Services Composition by I/O Data Structure Correspondences ................................................................135

Qiushi Wang and Osamu Shigo

Session 2C: Software Testing I

Search-Based Testing Guidance Using Dominances vs. Control Dependencies ...........................................145

Ahmed S. Ghiduk

Analysis of the OLSR Protocol by Using Formal Passive Testing ................................................................152

César Andrés, Stéphane Maag, Ana Cavalli, Mercedes G. Merayo, and Manuel Núñez

Variable Strength Interaction Testing with an Ant Colony System Approach ...........................................160

Xiang Chen, Qing Gu, Ang Li, and Daoxu Chen
Spectral Debugging with Weights and Incremental Ranking .................................................................168

Lee Naish, Hua Jie Lee, and Kotagiri Ramamohanarao

Session 3A: Metrics and Measurement II

Improve Analogy-Based Software Effort Estimation Using Principal Components Analysis and Correlation Weighting ..................................................................................................................179

Jianfeng Wen, Shixian Li, and Linyan Tang

Investigating the Effect of Pair Programming and Software Size on Software Quality and Programmer Productivity ...............................................................................................................187

Raymund Sison

Session 3B: Software Design II

Describing Pattern Languages for Checking Design Models ........................................................................197

Bahman Zamani and Greg Butler

An Efficient Context-Based User Interface by Exploiting Temporality of Attributes .................................................................................................................205

Mittapally Kumara Swamy and Polepalli Krishna Reddy

Session 3C: Aspect Oriented Programming

Aspect Oriented Programming Made Easy: An Embedded Pointcut Language ........................................215

Antonio Cisternino and Sebastien Vaucouleur

Composition Analysis of Multiple Aspects in Aspect-Oriented Programs ..................................................223

Naifees Qamar

Session 4A: Requirements Engineering II

Elicit the Requirements on Software Dependability: A Knowledge-Based Approach ................................233

Chun Liu, Yue Wang, and Zhi Jin

Modeling Access Control Requirements in Feature Model ........................................................................241

Lianshan Sun and Gang Huang

Performing Projection in Problem Frames Using Scenarios ........................................................................249

Zhi Jin, Xiaohong Chen, and Didar Zowghi

A Light-Weight Formal Approach for Modeling, Verifying and Integrating Role-Based Access Control Requirements ........................................................................................................257

Saad Zafar

Session 4B: Program Analysis

Contribution-Based Call Stack Abstraction and Its Application in Pointer Analysis of AspectJ Programs .........................................................267

Ju Qian, Zifeng Cui, Baowen Xu, and Xiaofang Zhang
Program Sifting: Select Property-Related Functions for Language-Based Static Analysis

Kai Yu, Cong Wang, Yin-li Chen, and Meng-xiang Lin

Avoiding Some Common Preprocessing Pitfalls with Feature Queries

Stan Jarzabek, Yinxing Xue, Hongyu Zhang, and Youpeng Lee

Sequence Diagram Slicing

Kunihiro Noda, Takashi Kobayashi, Kiyoshi Agusa, and Shinichiro Yamamoto

Session 4C: Software Testing II

Test Coverage Metric for Two-Staged Language with Abstract Interpretation

Taeksu Kim, Chunwoo Lee, Kiljoo Lee, Soohyun Baik, Chisu Wu, and Kwangkeun Yi

Analysis of Problems in Testing Practices

Jussi Kasurinen, Ossi Taipale, and Kari Smolander

Unit Testing Approaches for BPEL: A Systematic Review

Zulfa Zakaria, Rodziah Atan, Abdul Azim Abdul Ghani, and Nor Fazlida Mohd. Sani

Scheduling Test Execution of WBEM Applications

Lian Yu, Yu Su, and Qianxing Wang

Session 5A: Requirement Engineering III

Incomplete Software Requirements and Assumptions Made by Software Engineers

Özlem Albayrak, Hülya Kurtoglu, and Mert Bıçakçı

Requirements Identification and Representation in Software Product Line

Shahliza Abd Halim, Dayang Norhayati A. Jawawi, and Safaai Deris

Propagating Requirement Change into Software High Level Designs towards Resilient Software Evolution

Noraini Ibrahim, Wan M.N. Wan Kadir, and Safaai Deris

Model-Driven Automatic Generation of Verified BPEL Code for Web Service Composition

Bixin Li, Yu Zhou, and Jun Pang

Session 5B: Software Maintenance

Problematic Code Clones Identification Using Multiple Detection Results

Yoshiki Higo, Ken-ichi Sawa, and Shinji Kusumoto

Code Clone Graph Metrics for Detecting Diffused Code Clones

Yoshihiko Fukushima, Raula Kula, Shinji Kawaguchi, Kyohei Fushida, Masataka Nagura, and Hajimu Iida

Assessing and Estimating Corrective, Enhancive, and Reductive Maintenance Tasks: A Controlled Experiment

Vu Nguyen, Barry Boehm, and Phongphan Danphitsanuphan
Identifying Stagnation Periods in Software Evolution by Replaying Editing Operations

Takayuki Omori and Katsuhisa Maruyama

Session 5C: Software Testing III

Fault Localization Based on Multi-level Similarity of Execution Traces

Xinping Wang, Qing Gu, Xin Zhang, Xiang Chen, and Daoxu Chen

Directed Test Suite Augmentation

Zhihong Xu and Gregg Rothermel

Checking Model Consistency Using Data-Flow Testing

Chen-Wei Wang and Alessandra Cavarra

An Effective Path Selection Strategy for Mutation Testing

Mike Papadakis and Nicos Malevris

Session 6A: Project Management

Investigating the State of User Involvement in Practice

Juho Heiskari and Laura Lehtola

Extracting Development Organization from Open Source Software

Jongdae Han, Chisu Wu, and Byungjeong Lee

Project Management Using Risk Identification Architecture Pattern (RIAP) Model: A Case Study on a Web-Based Application

Thamer Al-Rousan, Shahida Sulaiman, and Rosalina Abdul Salam

Emam Hossain, Muhammad Ali Babar, Hye-young Paik, and June Verner

Session 6B: Software Process

An Automatic Compliance Checking Approach for Software Processes

Xiaoyang He, Jingang Guo, Yasha Wang, and Ying Guo

A Push for Software Process Improvement in Thailand

Pornchai Mongkolnam, Udorn Silparcha, Narongrit Waraporn, and Vajirasak Vanijja

Applying a Systematic Approach to Link Requirements and Testing: A Case Study

Johanna Kukkanen, Kyösti Väkeväinen, Marjo Kauppinen, and Eero Uusitalo

A Formal Framework to Integrate Timed Security Rules within a TEFSM-Based System Specification

Wissam Mallouli, Amel Mammar, and Ana Cavalli
Session 6C: Verification and Validation II

Towards Automated Verification of Distributed Consensus Protocols ...........................................................499

Takahiro Minamikawa, Tatsuhiro Tsuchiya, and Tohru Kikuno

A Method for Modeling and Analyzing Fault-Tolerant Service Composition ...............................................507

Guisheng Fan, Huiqun Yu, Liqiong Chen, and Dongmei Liu

Modular Checking of C Programs Using SAT-Based Bounded Model Checker .............................................515

Yuusuke Hashimoto and Shin Nakajima

Selecting Usability Evaluation Methods for Software Process Descriptions ...............................................523

Mohd Naz'ri Mahrin, Paul Strooper, and David Carrington

Author Index
