5th Annual International Conference on Lithium Mobile Power 2009

Advances in Lithium Battery Technologies for Mobile Applications

Documentation

Boston, Massachusetts, USA
12-13 November 2009
Some format issues inherent in the e-media version may also appear in this print version.
# TABLE OF CONTENTS

Materials and Design Strategies for High Power Li-Ion Batteries for HEV and PHEV .......................... 1

K. M. Abraham

PHEV Battery Performance in a Vehicle to Grid (V2G) Utilization Scenario: A Technological and Economic Analysis ................................................................. 52

Jay Whitacre

Transforming Lithium Ion Superpolymer Battery Technology from the Lab to Commercial Electric Vehicles ............................................................ 77

Sankar Das Gupta

Changing the Way the World Views Portable Power ........................................................................... 94

Per Onnerud

Beyond Li-Ion, A Strategy for Step-Change Improvement in High-Power Lithium-Ion Batteries .................. 115

Steven J. Visco

A123’s Nanophosphate Technology for Next Generation High-Power Lithium-Ion Batteries .................. 159

Leslie Pinnell

Lithium-Ion Batteries Using Ni-Based Cathode Material for High Capacity and Reliability .................. 194

Yasuhiko Hina

CAM-7: A Unique Cathode Material Providing Both High Energy Density and High Power for Li-Ion ........ 204

Brian M. Barnett

High Energy Density Lithium Cells ........................................................................................................ 222

Sébastien Patoux

Nano-Li$_4$Ti$_5$O$_12$ Based Lithium Ion Battery for HEV and PHEV Application ................................. 260

Veselin Manev

Development of Materials for Advanced Lithium-ion Batteries for NASA’s Upcoming Lunar Missions .... 290

Ratnakumar V. Bugga

Large Format Li-Ion Batteries Development at Leclanché ............................................................... 330

Karl-Heinz Pettinger

Ambient Operation of Li-Ion Batteries ........................................................................................................ 356

Jason Zhang

High Energy Density Li/CFx Battery for Soldier Portable Power .................................................... 383

Sheng S. Zhang

Electrolyte Solution for Li Ion Batteries ............................................................................................... 410

Doron Aurbach

Role of Electrolyte on the Formation of Electrode Surface Films in Lithium Ion Batteries .................... 444

Brett L. Lucht

Rechargeable MnO$_2$ in Aqueous Lithium Electrolyte: Good News and Bad News from a Battery Perspective .................................................................................. 474

Manickam Minakshi

Lithium Battery Platform Hazard Evaluation and Criteria ...................................................................... 503

Clinton Winchester

IEEE 1725 and Cellular Products ........................................................................................................ 542

Snehal Dalal

Lithium Battery Safety and Performance; Applications of Calorimetry .............................................. 556

Martyn Ottaway

High Performance Li-Ion Battery Separator Made of Nanofiber Overlaid Nonwoven ....................... 604

Yoshinori Kishimoto

Internal Short Circuit in Li-Ion Cells ........................................................................................................ 636

Hossein Maleki

Modeling of Battery Systems and Installations for Automotive Applications ........................................ 655

Richard Johns

Designing the Battery Management System (BMS) ............................................................................. 679

Ken Chisholm

Li-Ion Battery Life Extension - Charging and Discharging Strategies .................................................. 698

Kathryn Miles
POSTERS

IEEE 1725 and Cellular Products ................................................................. 722
   Snehal Dalal

High Performance Li-Ion Battery Separator Made of Nanofiber Overlaid Nonwoven ............................................... 723
   Yoshinori Kishimoto, Koji Ichihara, Shoji Okada, Takuya Kadota, Hiroki Nanko

The Use of Thermal Analysis Techniques in the Study of Li-ion Cells ............................................................. 724
   Peter Ralbovsky

Syntheses of Lithium Ion Battery Chemicals ............................................. 725
   Pekka Antero Tanskanen, Siru Annika Tuomaala, Ulla Marianne Lassi
