# TABLE OF CONTENTS

## KEYNOTE PAPERS

<table>
<thead>
<tr>
<th>Title</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vibration and Stress Analysis in the Presence of Structural Uncertainty</td>
<td>1</td>
</tr>
<tr>
<td>R S Langley</td>
<td></td>
</tr>
<tr>
<td>Experimental Studies on the Performance of Novel Layered Materials Under Highly Dynamic Loads</td>
<td>12</td>
</tr>
<tr>
<td>A Shukla</td>
<td></td>
</tr>
<tr>
<td>Analysis Methods for the Practical Application of Fracture Mechanics</td>
<td>25</td>
</tr>
<tr>
<td>R A Ainsworth</td>
<td></td>
</tr>
</tbody>
</table>

## SYSTEM IDENTIFICATION

<table>
<thead>
<tr>
<th>Title</th>
<th>Page</th>
</tr>

</table>
ROTOR DYNAMICS

Smart Machines with Flexible Rotors ........................................................................................................... 159
A W Lees

Finite Element Analysis of a Soft Mounted 2-pole Asynchronous Machine Concerning Vibration Stability ............................................................................................................................... 167
U Werner

Controlling Flexible Rotor Vibrations Using Parametric Excitation ............................................................. 175
L Atepor

Controlling Rotordynamic Response Without Squeeze-film Dampers (SFDs) ................................................... 183
S Jiffri, S Garvey

Untwisting the Campbell Diagrams of Weakly Anisotropic Rotor Systems ................................................... 192
O N Kirillov

MANUFACTURING PROCESSES 1

Modal Testing and Finite Element Model Updating of Laser Spot Welds ....................................................... 203
N Abu Husain, H Haddad Khodaparast, A Snaylam, S James, M Sharp, G Dearden, H Ouyang

Dynamic Characterization of the Cutting Conditions in Dry Turning ............................................................. 211
R Serra, H Chibane, R Leroy

Optimisation of Variable Helix End Millings Tools by Minimising Self Excited Vibration ................................. 219
A R Yasoff, N D Sims

A Finite Element Model of Ultrasonic Extrusion ............................................................................................. 227
M Lucas, Y Daud

STRUCTURAL INTEGRITY ASSESSMENT 1

High Temperature Life Prediction of a Welded IN718 Component ................................................................. 234
D W J Tanner, A A Becker, T H Hyde

A Review of Residual Stress Analysis Using Thermoelastic Techniques ......................................................... 242
A F Robinson, J M Dulieu-Barton, S Quinn, R Burguete

Collapse of Geometrically Imperfect Stainless Steel Tubes Under External Hydrostatic Pressure .................. 250
C T F Ross, T Bowler, A P F Little

The Influence of Post-local Buckling Mechanics on the Stress Variations, Axial Stiffness and Ultimate Failure Strength of Uniformly Compressed Thin-walled I-Section Struts .............................................................................. 260
J Loughlan, N Yidris, P R Cunningham

MANUFACTURING PROCESSES 2

Vibration of Workpieces During Aggressive Turning Operations ....................................................................... 268
X Han, M Wang, H Ouyang

Modeling and Optimization of Tensile Shear Strength of Titanium/Aluminum Dissimilar Welded Component ......................................................................................................................... 276
E M Anawa, A G Olabi, F A Elshukri

Modeling the Effect of Multiple Pulse Treatment on Deformation Processing .............................................. 286
G A Tskhondiya

Application of Spectroscopic Ellipsometry for Investigations of Compaction and Decompaction State in Si-SiO2 Systems ............................................................................................................. 294
W Rzodkiewicz, A Panas

Vibration Analysis of Atomising Discs .............................................................................................................. 301
H Deng, H Ouyang

STRUCTURAL INTEGRITY ASSESSMENT 2

A Methodology to Predict Residual Life in LCF Regime ................................................................................... 309
C Delprete, A Vercelli

Fatigue Crack Initiation Life Prediction of Railroad ......................................................................................... 317
P Hosseini Tehrani, M Saket
Characterisation of the Fatigue Properties of Cast Irons Used in the Water Industry and the Effect on Pipe Strength and Performance ............................................................................................................................... 325
H Mohebbi, D A Jesson, M J Mulheron, P A Smith

Numerical Analysis of the Effect of Torispherical Head on the Buckling of Pressure Vessels .......................................................... 333
M R Khoshravan, A Rahmani

COMPOSITE STRUCTURES AND MATERIALS

Experimental Study of Thermal Stresses in a Bonded Joint ............................................................................................................................... 341
A Deheeger, C Badalescu, J D Mathias, M Grédiac

A Novel Tetrahedral Element for Static and Dynamic Analysis of Laminated Composites ................................................................. 347
I A Jones, W Ruijter, A C Long

Collapse of Composite Tubes Under Uniform External Hydrostatic Pressure .................................................................................................................. 355
P T Smith, C T F Ross, A P F Little

Identification of the Mechanical Behaviour of Low Density Hyperelastic Polymeric Foams from Full-field Measurements .............................................................................................................. 364
F Pierron, B Guo

Significance of Low Energy Impact Damage on Modal Parameters of Composite Beams by Design of Experiments .................................................................................................................................................. 372
A Shahdin, J Morlier, Y Gourinat

Nonlocal Conditions for the Transition from Damage to a Localized Failure in Granular Composites Under Quasistatic Loading ................................................................................................................................. 380
A V Zaitsev

CIVIL ENGINEERING APPLICATIONS 1

The Dynamic Behaviour of a Non-stationary Elevator Compensating Rope System Under Harmonic and Stochastic Excitations ............................................................................................................................... 388
S Kaczmarczyk, R Iwankiewicz, Y Terumichi

An Ultrasonic Corer for Planetary Rock Sample Retrieval ................................................................................................................................. 396
A Harkness, A Cardoni, M Lucas

Analysis of Flexible Fabric Structures for Large-scale Subsea Compressed Air Energy Storage ........................................................................................................................................................................................................... 404
A Pimm, S Garvey

The Effect of Inclined Soil Layers on Surface Vibration from Underground Railways Using a Semi-analytical Approach ................................................................................................................................................................. 413
S Jones, H Hunt

Finite-element Analysis of Thermal-induced Stresses Around a Cased Injection Well ................................................................................................................................. 421
A Ferla, A Lavrov, E Fjær

Wavelet Analysis of Beam-soil Structure Response for Fast Moving Train ................................................................................................................................. 429
P Kozioł, Z Hryniewicz, C Mares

ADVANCED MODELLING TECHNIQUES 1

Solving Time-dependent Problems by an RBF-PS Method with an Optimal Shape Parameter .................................................................................................................................................................................. 437
A M A Neves, C M C Roque, A J M Ferreira, C M M Soares, R M N Jorge

Volterra Methods for Constructing Structural Dynamic Observables for Nonlinear Systems: An Extended Calculation ................................................................................................................................................................. 444
G Manson, K Worden

The New Numerically-analytic Method for Integrating the Multiscale Thermo Elastoviscoplasticity Equations with Internal Variables ........................................................................................................................................................................................................... 454
V Kukudzhanov

CIVIL ENGINEERING APPLICATIONS 2

Low Dimensional Models for Stick-slip Vibration of Drill-strings ................................................................................................................................. 462
M Silveira, M Wiercigroch

A Computationally Efficient Software Application for Calculating Vibration from Underground Railways ........................................................................................................................................................................................................... 470
M F M Hussein, H Hunt
Raising of a Heavy Semi-circular Vault on a Rigid Centering ....................................................................................... 476
D A Parshin

FRACTURE AND DAMAGE 1

Deformation and Fracture of Plates of Finite Thickness ........................................................................................... 485
A Kotousov, S Harding, J Codrington
Modelling of Crack Deflection at Core Junctions in Sandwich Structures ................................................................. 493
J Jakobsen, J H Andreasen, O T Thomsen
Numerical and Experimental Analysis of the Directional Stability on Crack Propagation Under Biaxial Stresses ............................................................................................................................... 501
R Rodríguez-Martínez, G Urriolagoitia-Calderón, G Urriolagoitia-Sosa, L H Hernández-Gómez, E A Merchán-Cruz, R G Rodríguez-Calderón, J M Sandoval-Pineda
Curve Fitting of Mixed-mode Isopachics ......................................................................................................................... 511
R I Hebb, J M Dulieu-Barton, K Worden, P Tatum

IMPACT, DYNAMIC LOADING AND DAMPING 1

Identification of Material Stiffness and Damping in Vibrating Plates Using Full-field Measurements .................. 519
A Giraudeau, F Pierron
High Speed Image Correlation for Vibration Analysis ................................................................................................. 526
T Siebert, R Wood, K Splitthof
Characterization of the Deformation Behaviour of PCBs Under Dynamic Loading Conditions ........................................ 534
P F Fuchs, Z Major, R W Lang
Effect of Impact Damper on SDOF System Vibrations Under Harmonic and Impulsive Excitations .................. 540
S M Zahrai, A F Rod

FRACTURE AND DAMAGE 2

Experimental Verification and Comparison of Mode Shape-based Damage Detection Methods .................. 548
M Radzienski, M Krawczuk
A Strain-damage Coupled Model and Its Application to Near Crack Tip Localization Analysis .......................... 556
V A Kovalev, Y N Radayev
Numerical and Experimental Evaluation of the Residual Stress Relaxation and the Influence Zone Due to Application of the Crack Compliance Method ............................................................................................................................... 565
J M Sandoval-Pineda, G Urriolagoitia-Sosa, G Urriolagoitia-Calderón, L H Hernández-Gómez, J García-Lira, J A Beltrán-Fernández, R Rodríguez-Martínez
Dynamic Response Analysis of a Heavy Commercial Vehicle Subjected to Extreme Road Operating Conditions ................................................................. 573
K Chinnaraj, S P Mangalaratnam, C Lakshmana Rao
Strain Limit Dependence on Stress Triaxiality for Pressure Vessel Steel ............................................................ 581
Y-C Deng, G Chen, X-F Yang, T Xu
Finite Element Prediction of the Ultimate Axial Load Capacity of V-section Band Clamps .......................... 589
S M Barrans, M Muller

NOVEL SENSOR TECHNOLOGY 1

Magnetic Shape Memory (MSM) Actuators in Practical Use ...................................................................................... 597
K Majewska, A Zak, W Ostachowicz
Load Estimation from Photoelastic Fringe Patterns Under Combined Normal and Shear Forces .................. 605
V N Dubey, G S Grewal
Thermoelastic Stress Analysis of a 2D Stress Field Using a Single Detector Infrared Scanner and Lock-in Filtering ............................................................................................................................... 613
G Pitarresi, A Normanno, L D’Acquisto
Combining Digital Image Correlation and Projected Fringe Techniques on a Multi-camera Multi-projector Platform ............................................................................................................................... 621
T N Nguyen, J M Huntley, R Burguete, C R Coggrave
Measurement of the Shear Wave Speed in a Submerged Plate ................................................................................. 629
A J Hull, B A Cray
NOVEL SENSOR TECHNOLOGY 2

Residual Stress Relaxation Measurements Across Interfaces at Macro- and Micro-scales Using Slitting and DIC ................................................................. 637
A Blair, N Daynes, D Hamilton, G Horne, P J Heard, D Z L Hodgson, T B Scott, A Shiferenlikht

Capturing Higher Modes of Vibration of Micromachined Resonators ........................................ 645
K P Venkatesh, R Pratap

A Study on the Precision of a Confocal Probe from Its Fork Frequency and Amplitude ............... 653
Z Qiu, K N Yao, B X Chen, X H Li, Y Zhong

IMPACT, DYNAMIC LOADING AND DAMPING 2

The Assessment of Vibration Absorption Capacity of Elevator’s Passengers .................................. 661
I Herrera, S Kaczmarczyk

Analytical Modelling of the Transient Dynamics of Pipes with Flowing Medium .......................... 669
A Kotousov, R Mohammad

Numerical Analysis of the Effect of Isotropic and Kinematic Hardening of Anisotropic Targets in Impact Loading ............................................................... 676
M N Krivosheina, S V Kobenko, M A Kozlova

Vibration of a Continuous Beam Excited by a Moving Mass and Experimental Validation ............. 684
D Stancioiu, S James, H Ouyang, J E Mottershead

STRUCTURAL HEALTH MONITORING

Approximation of the Duffing Oscillator Frequency Response Function Using the FPK Equation .................. 693
E J Cross, K Worden

Damage Detection in Turbine Wind Blades by Vibration Based Methods ...................................... 702
Ł Dolinska, M Krawczuk

Investigation of the Nonlinear Dynamics of a Partially Cracked Plate .............................................. 710
A Israr, L Atepor

Damage Localization from Vibration Data Using Hierarchical a Priori Assumptions ....................... 718
A Huhtala, S Bossuyt

Gearbox Diagnostics Using Wavelet-based Windowing Technique ............................................. 726
F K Omar, A M Gaouda

Methods for Detecting Fatigue Cracks in Gears ......................................................................... 734
A Belšak, J Flasik

ADVANCED MODELLING TECHNIQUES 2

3D Time-domain Spectral Elements for Stress Waves Modelling .................................................. 740
P Kudela, W Ostachowicz

Quadratic Partial Eigenvalue Assignment Problem with Time Delay for Active Vibration Control .......................................................... 748
J M Pratt, K V Singh, B N Datta

Hybrid Fuzzy and Sliding-mode Control for Motorised Space Tether Spin-up When Coupled with Axial Oscillation .......................................................... 756
Y Chen, M P Cartmell

Nonlinear Vibrations of an Inclined Beam Subjected to a Moving Load ........................................ 764
A Mamandi, M H Kargarmovin, D Younesian

Thermo-mechanical Analysis Using a Multiphysics Approach .................................................... 773
C Delprete, F Freschi, M Repetto, C Rosso

Differential Operators Associated with the Equations of Motion and Nondissipative Heat Conduction in the Green-Naghdi Theory of Thermoelasticity ............................................. 781
S A Lychev, A V Manzhurov

Innovative Unmanned Airship Structural Analysis: Dual-hull and Exoskeletal Configurations ........ 789
A Cappadona, R Lecca, M Vazzola, P Gilli, P Farina, C Surace

Author Index
