2009 Second International Symposium on Information Science and Engineering

(ISISE 2009)

Shanghai, China
26-28 December 2009

Editors:

W. Chen  B. Hu
F. Yu     J. Shu
Second International Symposium on Information Science and Engineering

ISISE 2009

Table of Contents

Message from the ISISE 2009 General Chairs ................................................................. xv
ISISE 2009 Organizing Committee .................................................................................. xvi
ISISE 2009 Committee Members ................................................................................... xvii

Computer Applications

The Comprehensive Application Study of GRA and ISM in System Structure
Analysis ........................................................................................................................................ 3
Rui-Jun Guo, Bo-Liang Lin, Xin-Bo Ai, and Wan-Xiang Wang

RFID Network Planning Based on MCPSO Algorithm ....................................................... 8
Ben Niu, Edward C. Wong, Yujuan Chai, and Li Li

Research on Dynamic Determination Scheme for Subject’s Integrity Level of OpenID ............................................................................................................................... 13
Junyin Wei, Mingxi Zhang, and Hui Liu

Design of an Application Cooperation Fair Congestion Control Mechanism .................. 18
He Hongying, Zeng Yunbing, and Chen Youjun

Comparison of Several Cloud Computing Platforms ......................................................... 23
Junjie Peng, Xuejun Zhang, Zhou Lei, Bofeng Zhang, Wu Zhang, and Qing Li

Application on Seepage Monitoring by Multi-point Optical Fiber Grating
Temperature Measurement System ....................................................................................... 28
Jun Tao, Lei Mu, and Ping Du

Noise Reduction Technology of Random Vibration Signal Based on Singular Entropy Theory ......................................................................................................................... 32
Zhang Jianwei and Li Huokun

A Three Dimensional Mesh Improvement Algorithm Based on Curvature Flow .............. 36
Zhenhong Lv and Xin Chen
The Research of New Model of Agricultural E-commerce Based on Practical Teaching Requirement .................................................................41
Lei Lei

Quality of College Teaching-Aided Website Service: Case Study ...............................................................45
Bai Yan, Li Jimei, and Xu Yan

Emergency Response Organization Ontology Model and its Application ...................................................50
Wenjun Wang, Xiankun Zhang, Cunxian Dong, Shan Gao, Lei Du, and Xingrong Lai

Database Systems

High-Speed Railway Fundamental Information Database System and its GIS ..........................................................57
Xiaoning Zhai and Ziyu Liu

Reducing PAPR with Novel Precoding Method in OFDM System .................................................................61
Xiaocui Lou

Study of a Layout Optimization Problem of Web Advertising .................................................................65
Lihua Zhang and Lei Liu

The Knowledge Collaboration Effects of R&D Project Team ......................................................................70
Junpeng Li and Jun Wang

Application and Research of GIS in Tianshan Highway Geo-hazard Appraisal and Decision Sustain ..................75
Bin Yang, Qing Wang, Zheng-wei He, De-zheng Gao, and Xiang-jun Pei

Risk Decision-Making for Purchasing Electricity in Multi-market on the Basis of Variance ..............................79
Xiao-jiang Huo and Zhong-jing Liu

An Empirical Research on the Development Strategy Efficiency of Small and Medium-Sized Commercial Bank Based on DEA .....................................................................................83
Man-xin Chai, Lin Xu, Guang-hui Song, and Wen-wei Guo

Study on Reverse Logistics in Enterprises .......................................................................................87
Weidong Guo

The Effect of Knowledge Transfer Intention of Customer on Knowledge Transfer Behavior: A Social Exchange Perspective ........................................................................................................91
Tao Wang, Chuanxin Peng, and Nan Cui

Two Styles of Game Analysis between Environmental Protection Department and Manufacturer ..................95
Ziwen Han and Shanshan Jiang

Data Mining in Individuality Long-Distance Education System Applied Research .............................................99
Lan Wang

The Design and Implementation of System Monitoring Component of Workload Adaptation Framework in Autonomic DBMSs .................................................................104
Yan Qiang, Jun-jie Chen, and Xiao-gang Wang
Electronic Commerce

High Credible Model of E-commerce Website ................................................................. 109
Yu Song and Ling Wang

A Reversed Stackelberg Approach to Electronic Commerce Logistics Based on Supernet
work Theory .................................................................................................................. 114
Di Suo and Fuan Wen

Analysis on Channel Information and Control Structure Performance in Food
Supply Chain under E-commerce Environment ............................................................ 119
Qin Li

The Formative Mechanism of Marketing Capability: The View of Organizational Learning
and Knowledge Management ..................................................................................... 122
Quanhong Liu and Tao Wang

Ontology-Based Coordination and Implementation for Garment Supply Chain
Management ................................................................................................................ 126
Xin Jin

Procedure for Traditional Enterprises Developing E-commerce Strategies:
Efficient Guideline for Doing E-commerce ................................................................. 131
Baozhong Zhang and Ying Han

Information Processing Methods

Ant Colony Algorithm Used for Bankruptcy Prediction ................................................. 137
Shuihua Wang, Lenan Wu, Yudong Zhang, and Zhengyu Zhou

Application and Research of Data Mining Based on Improved PCA Method ............. 140
Wen-Yu Wang and Chuan-Xing Qu

Convergence Analysis and Parameter Select on PSO .................................................. 144
Zhang Qingqing, He Xingshi, and Sun Na

The Fuzzy Comprehensive Evaluation on Credit Risk of Power Customers
Based on AHP ............................................................................................................... 148
Lu Jianchang and Wu Jipeng

Estimating Upper Bound of Duration for Instances of Generalized
Well-Formed Workflow .............................................................................................. 152
Zuoxian Nie

Interval Estimation of Data Series with Poor Information Using Fuzzy Norm
Method ....................................................................................................................... 158
Xintao Xia and Qing Zhou

On the Complexity of Shor’s Algorithm for Factorization ........................................ 164
Zhengjun Cao and Lihua Liu
Information Security

A New Steganography Algorithm Based on Spatial Domain ................................................................. 171
   Wang Yan and Ling-di Ping
Mobile Conference Scheme Based on Verifiable Random Number ...................................................... 177
   Yining Liu, Jianyu Cao, and Min Zeng
An Improved Anonymous Remote Authentication Protocol ................................................................. 181
   Yining Liu and Jianyu Cao
Propagation Model for Botnet Based on Conficker Monitoring ............................................................ 185
   Runheng Li, Liang Gan, and Yan Jia
An Efficient Feature Redundancy Removal Approach towards Intrusion Detection in Ad Hoc Network .................................................................................................................... 191
   Huilin Yin, Pingping Xu, and Tingting Zhu
Design and Implementation of an Initiative and Passive Network Intrusion Detection System .......... 196
   Tian Li and Xueming Zhai
An Adaptive Method to Identify the Web Sensitive Information ........................................................... 199
   FengYao Zeng, Hui Gao, and Yan Fu
Towards a Theory of Cyber Security Assessment in the Universal Composable Framework ................. 203
   Huafei Zhu
The Application Research of Information Hiding Technology in Network Security ................................ 208
   Jing Zhang and Xin-Guang Li
Study on Action and Attribute-Based Access Control Model for Web Services .................................. 213
   Jian Shu, Lianghong Shi, Bing Xia, and Linlan Liu
A Design of Secure Access Gateway Moving the Control Terminal Down to the Layer 2 Switches .... 217
   Wei Zhong and Xu Lili

Multimedia Technology

Design and Research on Free Lossless Audio Decoding Systems under the Embedded Development Platform of ARM9 .......................................................... 223
   Zhu Fang, Cai Weiming, and Zhou Yukun
Low Complexity Mode Decision for H.264 Based on Macroblock Motion Classification .............................................. 227
   Wei Geng and Wu Lenan
An Amended Rate Model on the Intra-rate and Quantization Parameter for Video Coding under the Complexity Constrains .............................................. 231
   Wei Geng and Wu Lenan
On the Digital Development of Mountain-Based World Cultural Heritage Sites in China

Xiaoyan Zhang and Xianglin Fang

An Ontology-Based General Multi-scale Conceptual Model and its 3D GIS Application

Yaoming Yang, Zhe Gan, Hong Chen, and Xiaoan Tang

Communications Systems

A Common Information Infrastructure for Multi Command Center System

Xiao Zhang, Zhan-huai Li, and Jian-quan Chen

Online Network Resource Allocation Mechanism with the Continuous High Satisfaction

Bei Jin, Jinkui Xie, Tingting Wang, and Zongyuan Yang

A Methodology for the Exploration of Web Browsers

Xin Haitao

The Research on Feature Reduction of Multi-source Heterogeneous Sensor Network

Jiang Yanji, Jiang Ze, and Huang Fenggang

A High Performance Transport Protocol for JTangMQ

Yong Su, Jianwei Yin, Yue Chen, and Zhilin Feng

Classified Real Time Scheduling Mechanism in WDM Network

Zhou Li and Xiong Huagang

Study on the Information Service System for Rural Off-Farm Employee Based on Wireless Network

Guoqiang Ren and Yuhui Luo

Optimal Assignment of Delivery Capacity for Network with Constraint

Ming Luo

Design and Realization of Embedded Ethernet Communication System Based on ARM

Mei Wang, Ruimei Zhao, and Huiting Duan

Theoretic Thought on the Constraints of Information Quality under Network Information-Sharing Environment

Song Liyong

The VoIP Model Research Based on Finite Birth-Death Processes in Multi-channel Wireless Mesh Networks

Bin Shen, Rui Wang, Huiqiong Luo, Shouhong Yang, and Fei Peng
Artificial Intelligence

Failure Importance Analysis and Adjustment Based on Bayesian Networks ................................................. 303
   Shubin Si, Wei Hu, and Zhiqiang Cai
A HRD Evaluation Method Based on BP Neural Network .................................................................................. 309
   Dezhen Feng and Ying Gao
The Research of System Survivability Architecture Based on Immunity Principle ................................................. 313
   Jiang Yanji and Huang Fenggang
Research on Drought Forecast Based on Rough Set Theory .............................................................................. 318
   Zhao Liu and Chang-lu Qiao
An Automatic Dead Chicken Detection Algorithm Based on SVM in Modern Chicken Farm .................................. 323
   Weixing Zhu, Yansong Peng, and Bin Ji
Analysis on the Competitive Intelligence in Business Management ................................................................. 327
   Linghua Ding
Reducing FPs in Nodule Detection Using Neural Networks Ensemble ............................................................... 331
   Zhenghao Shi, Kenji Suzuki, and Lifeng He
GAKC: A New GA-Based k Clustering Algorithm ............................................................................................... 334
   Li Xiaohong and Luo Min
Fast Ball Detection Method for Ping-Pong Playing Robots .............................................................................. 339
   Jing Sun, Jiandong Tian, Yingkui Du, and Yandong Tang
On Methods of Transfer as a Learning Based on Artificial Neural Networks .................................................... 344
   Lan Wang
Least Square Support Vector Machines in Combination with Principal Component Analysis for Electronic Nose Data Classification ........................................................................................................ 348
   Xiaodong Wang, Jianli Chang, Ke Wang, and Meiying Ye

Applied Cryptography

Constructions of Quantum Blind Signature Based on Two-Particle-Entangled System ........................................... 355
   Lixin Lin and Ying Guo
Verifiably Randomized Quick-Sort Protocols in the Presence of Malicious Adversaries ................................... 359
   Huafei Zhu
Trusted Evolutionary Algorithm for Global Optimization .................................................................................... 363
   Xuefeng Wang
Using LDA and Ant Colony Algorithm for Spam Mail Filtering ........................................................................ 368
   Hui Yin, Fengjuan Cheng, and Dexian Zhang
Improvement of One Password-Based Authenticated Key Exchange Protocol .................................................... 372
   Lihua Liu and Zhengjun Cao
A Secure Mobile Agent Protocol for M-commerce Using Self-Certified Proxy Signcryption .................................................................................................................................................................................. 376
Chao Wang, Yunpeng Han, and Fagen Li

Image Processing
Applying Image Warping Technique to Implement Real-Time Virtual Try-On Based on Person’s 2D Image ......................................................................................................................................................... 383
Xianhui Zeng, Yongsheng Ding, and Shihuang Shao
Face Orientation Estimation by Particle Swarm Optimization ................................................................................................................................. 388
Yudong Zhang, Lenan Wu, Zhengchao Dong, Shuihua Wang, and Zhengyu Zhou
On-Machine 3D Reconstruction Using Monocular Stereo Vision System .............................................................................................................................. 392
Zhongren Wang, Fan Zhang, and Yanming Quan
Digital Measuring Method Based on Computer Vision .............................................................................................................................................. 396
Ping Zhao, Yong-kui Li, and Jing-yang Li
Individual Encryption and Watermarking for Protecting Video on the Networks ........................................................................................................................................ 400
Xiaofeng Li, Xuedong Li, Wei Cui, and Yonghui Liu
A Method of an Efficient Embedding Algorithm of Digital Image Based on Difference Expansion ........................................................................................................ 403
Zhigang Li and Chuang Gao
Face Detection Based on AdaBoost and Skin Color ......................................................................................................................................................... 407
Yan Hou and Qingsong Peng
A Detection Algorithm for Yellow Traffic Signs in Natural Scenes ........................................................................................................................................ 411
Guangyu Yu, Guangmin Sun, Weiwei Zou, Zhiyue Wu, and Jing Wang
Line Detection in Image Based on Edge Enhancement .................................................................................................................................................. 415
Bin Chen and Hua Zhong
Review and Comparison: Building Extraction Methods Using High-Resolution Images .................................................................................................................. 419
Tiantian Feng and Junqiao Zhao
Automatic Extraction of the Anterior Chamber Contour in OCT images .................................................................................................................................... 423
Lifan Lin and Ying Ju

Pattern Recognition
Pattern Recognition and Analysis of the Blocked Traffic Queuing in Traffic Coordinated Control ................................................................................................................................. 429
Bohang Liu, Qingbing Li, Xiaoping Zhou, and Shaofang Wen
Low Cost Hand Gesture Learning and Recognition System Based on Hidden Markov Model ......................................................................................................................... 433
Jinjun Rao, Tongyue Gao, Zhenbang Gong, and Zhen Jiang
A Study of Fuzzy Emotion Semantic Ontology ......................................................................................................................................................... 439
Juan-juan Zhao, Jun-jie Chen, and Hui-hui Guo
A Hierarchical System Design for Language Identification .......................................................... 443
Haipeng Wang, Xiang Xiao, Xiang Zhang, Jianping Zhang, and Yonghong Yan
Combining MAP and MLLR Approaches for SVM Based Speaker Recognition with a Multi-class MLLR Technique .......................................................... 447
Haipeng Wang, Xiang Zhang, Xiang Xiao, Jianping Zhang, and Yonghong Yan
Harmonic Structure Features for Robust Speaker Recognition against Channel Effect .......................................................... 451
Chuan Cao, Xiang Xiao, Ming Li, Jian Liu, and Yonghong Yan
A Novel Object Tracking Algorithm Based on Point Pattern Matching .......................................................... 455
Fan Mo, Haodong Pei, Shuying Li, Dan Li, Baorong Xie, and Wei Zhou

**Software Engineering**

A Software Quality Comprehensive Assessment Algorithm with the Fuzzy Reference Pattern .......................................................... 463
Yu Song and Jing Yan
A Decoupling Approach to Business Component Identification .......................................................... 467
Xinwei Yuan and Zheng Qin
Software Usability Improvement: Modeling, Training and Relativity Analysis .......................................................... 472
Xiangwei Lai, Yanhui Zhou, and Weiqun Zhang

**System Simulation**

Simulation of Precoding Algorithms Based on Channel Decomposition .......................................................... 479
Meng Zhang and Zhen Gong
Computer Simulation and Parameters Estimation for Slope Based on Finite Element Method and Difference Evolution Arithmetic .......................................................... 483
Jiang Annan and Su Guoshao
A Novel Algorithm for DOA Estimation .......................................................... 488
Liu Fugang and Diao Ming
Modifying Simulation Model under Mixed Traffic Condition .......................................................... 493
Bohang Liu, Xikui Lv, Qingbing Li, and Jinglong Wu
Flight Simulation Testbed of Unmanned Helicopter .......................................................... 497
Jian de Wu, Ting Feng, and Yugang Fan
Tiling for Performance Tuning on Different Models of GPUs .......................................................... 500
Chang Xu, Steven R. Kirk, and Samantha Jenkins
Study on the Traffic Impact Analysis of the Second Ring Road in Beijing .......................................................... 505
Ge Zhiyuan and Zhao Fucheng
The Vehicle Routing Problem Based on the Immune Algorithm .......................................................... 509
Jiangang Xu and Jianhua Fan
A Topology Partition Algorithm Based on Link Coarsening in Parallel Network Simulation .......................................................... 514
Xianqing Yang, Hui He, Hongli Zhang, Kexin Zheng, and Xing Wang
Simulation Research of Nonbinary LDPC Code Based on Finite Fields ..........................................................519
Yuxiang Li, Guolong Liang, and Guangpu Zhang

Self-Organized Algorithm Simulation for Wireless Sensor Networks ..........................................................523
Yun Bai, Song-bo Ji, and Li Xin

Design and Realization of Task-Oriented Service Platform for Battlefield Environment Information ..........................................................527
Zhe Gan, Yaoming Yang, Xiaoan Tang, and Haiyan Yang

The Development of Verisimilar Information Security Training Platform Based on Virtual Host ..........................................................533
Wei Zhong and Liu Dong

A Rapid Decision-Making Model in Supply Chain Finance Emergency Based on GDSS ..........................................................539
Duan Weichang

Other Papers

An Improved RBF Network On-Line Learning Algorithm ..........................................................547
Zhang Xiao Ming and Ning Guang Liang

Analysis of Mode Mixing Phenomenon in the Empirical Mode Decomposition Method ..........................................................553
Yanli Yang, Jiahao Deng, and Caipeng Wu

Research on an Environment-Friendly Automated Equipment Applied to Hot-Phosphating for Drill Collar Coupling Screw Thread ..........................................................557
Zhang Limin, Duan Zhengyong, and Peng Yong

Research on Anti-Fading Performance of EBPSK System ..........................................................561
Feng Man and Wu Lenan

Double Close Loop Electrode Regulator System Based on Active Disturbance Rejection Control Technology ..........................................................565
Wang Yuhua, Lu Xiuhe, and Wang Shirong

The Iterative Calculation of Full Capacity of Roundabouts ..........................................................570
Rui-Jun Guo, Bo-Liang Lin, and Wan-Xiang Wang

A Segment-Based Dense Stereo Matching Algorithm ..........................................................574
Lixin Zhang, Dong Yang, and Zhengguang Xu

The Weak Signal Detection Based on Chaos and Genetic Algorithms ..........................................................579
Changjian Deng and Shaoquan Zhang

Application of Probability Rough Set to Product Model Selection ..........................................................583
Shouhua Yu, Tesheng Lin, and Jingying Ou

Uncertainty and its Evolvement of Rolling Element Bearing Friction Torque ..........................................................587
Xintao Xia and Yaping Zhang

An Improved Algorithm for Fast Bit Synchronization Based on Pi/4-DQPSK in Underwater Acoustic Communication ..........................................................592
Lizhi Li, Fengyu Sun, Renghui Shi, and Xiaoqun Zhao
