2010 Third IEEE International Conference on Digital Game and Intelligent Toy Enhanced Learning

(DIGITEL 2010)

Kaohsiung, Taiwan
12 - 16 April 2010
# Table of Contents

**Preface** .......................................................................................................................................................................ix

**Committee Chairs** ................................................................................................................................................x

**Program Committee** ..........................................................................................................................................xi

**Secretariat** ..............................................................................................................................................................xv

**Keynote Abstracts** ............................................................................................................................................xvi

---

## Full Papers

**Virtual Parabola Festival: The Platform Design and Learning Strategies for Virtual Learning Community of Practice** ................................................................. 3  
  *Ming-Shiou Kuo and Chi-Syan Lin*

**Social Praxis Within and Around Online Gaming: The Case of World of Warcraft** ................................................................. 10  
  *Christothea Herodotou*

**Extending Google Android’s Application as an Educational Tool** .................................................................................. 23  
  *Bian Wu, Alf Inge Wang, Anders Hartvoll Ruud, and Wan Zhen Zhang*

**TeMPS: A Conceptual Framework for Pervasive and Social Games** .................................................................................. 31  
  *Hong Guo, Hallvard Trætteberg, Alf Inge Wang, and Meng Zhu*

**Creating User Interface for Interactive Simulations** ................................................................................................. 38  
  *Jeetinder Singh and Jayanthi Sivaswamy*

**Multi-objective Evolution of Neural Go Players** ........................................................................................................... 46  
  *Kar Bin Tan, Jason Teo, and Patricia Anthony*

**Designing a Role-Play Game for Learning Taiwan History and Geography** ................................................................. 54  
  *Ju-Ling Shih, Chien-Wen Chuang, Jia-Jian Tseng, and Bai-Jian Shih*

**Developing Ubiquitous Learning System with Robots for Children’s Learning** ............................................................. 61  
  *Nian-Shing Chen, I-Chun Hung, and Chun-Wang Wei*
Toward a Framework for the Analysis and Design of Educational Games ..................................................69
    Vincent Aleven, Eben Myers, Matthew Easterday, and Amy Ogan

A Case Study of a Non-gamer Student’s Learning Process in VISOLE ..........................................................77
    Morris S.Y. Jang, Fong-lok Lee, Jimmy H.M. Lee, and Junjie Shang

Design-Based Action Research in the World of Robot Technology .................................................................85
    Gunver Majgaard

Quest Island: Developing Quest-Driven Learning Model by Blending Learning Tasks with Game Quests in a Virtual World ..........................................................93
    Zhi-Hong Chen, Calvin C.Y. Liao, and Tak-Wai Chan

Short Papers

Web-Based Multiplayer Online Role Playing Game (MORPG) for Assessing Students’ Java Programming Knowledge and Skills ...............................................................103
    Maiga Chang and Kinshuk

The Design of Circuit-Measuring Collaborative Learning System with Embedded Broker ..................................108
    Fu-Chien Kao and Siang-Ru Wang

Recreating Ancient Egyptian Culture in Second Life ..................................................................................114
    Morgan Leigh, Mark G. Elwell, and Steve Cook

An Interactive Caricature Creating System Based on Modified Snake Algorithm and Weighted Synthesizing Coloration ..............................................................119
    Mei-Yi Wu, Yu-Chen Chuang, Yi-Chian Huang, and Greg Gliemi

Adapting Learning Theories in Mobile Game-Based Learning Development ...............................................124
    Syamsul Bahrain Zaibon and Norshuhada Shiratuddin

Application of Educational Emotion Inference via Speech and Agent Interaction ........................................129
    I-Hen Tsai, Koong H.-C. Lin, Rui-Ting Sun, Ren-Ying Fang, Jhing-Fa Wang, Yan-You Chen, Chu-Chuan Huang, and Jhing-Sheng Li

Examining the Potentials of Computer Games for English Learning .........................................................134
    Howard Hao-Jan Chen and Wendy Yu-Chen Huang

Real Time Online Motion Capture for Entertainment Applications ..............................................................139
    Muhammad Zeeshan Patoli, Michael Gkion, Paul Newbury, and Martin White

“Serious” Programming Made Cuddly: A Fully End-User-Programmable Stuffed Toy ..................................146
    Nwanua Elumeze, Yingdan Huang, Jane Meyers, and Michael Eisenberg

Building Your Own Tangible Virtual World: A Design of an RFID-Based Tabletop Game Platform ................151
    Jingyu Tan and P.L. Patrick Rau

Learning Chinese History through Digital Game ........................................................................................156
    Clara Hui Chung Yan and Frankie Tam
Reactoon: Storytelling in a Tangible Environment ................................................................. 161
   Alexandra Alves, Roseli Lopes, PatrÃ­k Matos, Luiz Velho, and Djalma Silva

Multilayered Games for Science Education ........................................................................ 166
   Stephan Samuelson, Henry M. Halff, Lawrence Halff, and Christopher Brown

Preparation-before-Competition: Designing a Game-Based Environment to Facilitate Making Effort before Pet-Competitive Stage ......................................................... 171

Posters

Applying Speech Techniques to Practice Listening and Speaking Skills for EFL Learners: An Exploratory Study ......................................................................................... 179
   Ming-Kuan Tsai and Shelley Shwu-Ching Young

Teach Them All ..................................................................................................................... 182
   Fanny Lignon

Document Clustering Method Using Weighted Semantic Features and Cluster Similarity ................................................................................................................................. 185
   Sun Park, Dong Un An, and Choi Im Cheon

Creating Simultaneous Story Arcs Using Constraint Based Narrative Structure ............... 188
   Sung Hyun Moon, Seok-Kyoo Kim, and Sang-Yong Han

Managing the Development of Digital Educational Games ................................................. 191
   Paula Hodgson, Donald Man, and Josa Leung

Chitetris: A Chinese Proverb Learning Game Utilizing Tetris Game Plot ............................ 194
   Tsung Teng Chen

High Interactive Web-Annotation Based E-learning Platform ............................................ 198
   Ping-Lin Fan, Su-ju Lu, Han-Jang Wu, Wei-Hsien Wu, and Chih-Ming Chen

A Pac-Man Game on Campus Using GPS Location Information and Shortest Path Algorithm ...................................................................................................................................... 202
   Mei-Yi Wu, Shang-Rong Tsai, Jing-Chun Wang, and Yu-Chen Chuang

Adaptive Video Learning by the Interactive E-partner ......................................................... 207
   Chia-Hu Chang, Yu-Tzu Lin, and Ja-Ling Wu

On Design Methodology and Practice of Bionics .............................................................. 210
   Wan-Ting Chiu and Shang-Chia Chiu

Applying Lag Sequential Calculation and Social Network Analysis to Detect Learners’ Behavioral Patterns and Generate Automatic Learning Feedback-Scenarios for Educational MMORPG Games ................................................................. 213
   Huei-Tse Hou

Instructional Simulations for Teaching High School Computer Science Concepts: A Technology Acceptance Perspective ................................................................. 216
   Ming-Puu Chen, Chiung-Hui Chiu, and Cheng-Chih Wu

Learning Programming Concepts through Game Design: A PCT Perspective .................... 219
   Li-Chun Wang and Ming-Puu Chen
A Mobile and Web System with Contextual Familiarity and its Effect on Campus English Learning .................................................................222
  Shu-Chen Cheng, Wu-Yuin Hwang, Dun-Wei Wen, Sheng-Yi Wu, Ching-Hua Hsiehe, and Chia-Yu Chen
Modding Commercial Game for Physics Learning: A Preliminary Study .................................................................225
  Hang-Zheng Sun Lin and Guey-Fa Chiou
A Preliminary Outcome-Oriented Review of Game-Based Learning Research .................................................228
  Ju-Ling Shih, Eric Zhi-Feng Liu, and Chien-Wen Chuang
Analysis of Seven Important Studies in Research of Joyful Learning and Society .........................................................231
  Chun-Hung Lin, Eric Zhi-Feng Liu, and Ju-Ling Shih
Designing a Competitive Game for Promoting Students’ Effort-Making Behavior by Virtual Pets .................................................................234
  Maureen Wu, Calvin C.Y. Liao, Zhi-Hong Chen, and Tak-Wai Chan
Enhancing Feedbacks on Learning Word Problems with a Small Game .................................................................237
  Willson Lin, Peggy Li, Tak-Wai Chan, Oskar Ku, and Hercy N.H. Cheng
Effects of Digital Game-Based Extensive Mental Calculation Practice .................................................................240
  Oskar Y.M. Ku, Jesse C.Y. Wu, Blake C.J. Yang, Tak-Wai Chan, and Denise H. Wu
Designing a Simulation Game to Help Children Learn the Concept of Financial Management .................................................................243
  Hui-Wen Wu, Yana C.Y. Huang, Zhi-Hong Chen, Calvin C.Y. Liao, and Tak-Wai Chan

Author Index ........................................................................................................................................................................246
