## Volume 1

The Research of Acquiring BOC Signal in Navigation System .......................................................... 3

_Bo Qian, Yong-xin Feng, Cheng-sheng Pan, and Shuang Sun_

Detecting New Decentralized Botnet Based on Kalman Filter and Multi-chart

_CUSUM Amplification_ ......................................................................................................................... 7

_Jian Kang and Yuan-Zhang Song_

Improved Noncoherent Demodulation Based on MSDD for Block Differential

_UWB Communications_ ..................................................................................................................... 11

_Dazhong Mu, Zhengding Qiu, and Xiong Zhang_

GTP Security in 3G Core Network ........................................................................................................ 15

_Xuena Peng, Wen Yingyou, Zhao Dazhe, and Zhao Hong_

Bounds of Channel Assignment Problem for Cellular Networks Modelled as Triangular Grids .... 20

_Zi-ming Duan, Ping-li Lv, Lian-ying Miao, and Zheng-ke Miao_

Attacks against Two Identity-Based Signcryption Schemes ............................................................... 24

_Xing Wang and Hai-feng Qian_
A Transmission Range Adaptive Broadcast Algorithm for Vehicular Ad Hoc Networks .............................................................. 28
  Wu Xue-wen, Yan Wei, Song Shi-ming, and Wang Hui-bin

An Energy Efficient MAC Protocol for Wireless Sensor Surveillance Networks .......................................................... 33
  Guoqiang Zheng, Shengyu Tang, Fuchun Zhao, and Weihua Huang

Signal Strength Based Reliability: A Novel Routing Metric in MANETs .......................................................... 37
  Yaser Taj and Karim Faez

A Comprehensive Routing Protocol in Wireless Sensor Network Based on Ant Colony Algorithm .......................................................... 41
  Wenjing Guo, Wei Zhang, and Gang Lu

MIMO Capacity with Different Antenna Layout .......................................................... 45
  Wang Qian-ya, Yang Hong-wen, and Dai Li-yun

A Novel Limited Feedback Approach Based on Prediction for MIMO Beamforming System .......................................................... 49
  Min Wu, Zhengding Qiu, and Feiyuan Yang

Resource Search in Peer-to-Peer Network Based on Power Law Distribution .......................................................... 53
  Wei Song, Xi Zeng, Wenbin Hu, Yiting Chen, Chuanjian Wang, and Fangquan Cheng

Distributed Fault Detection for Wireless Sensor Based on Weighted Average .......................................................... 57
  Sai Ji, Shen-fang Yuan, Ting-huai Ma, and Chang Tan

A Generic Model for Software Monitoring Techniques and Tools .......................................................... 61
  Chang-Guo Guo, Xiao-Ling Li, and Jun Zhu

An Improved Fuzzy Clustering Method for Text Mining .......................................................... 65
  Jiabin Deng, JuanLi Hu, Hehua Chi, and Juebo Wu

Hopfield-Association: Establishing a Shared Key in the Wireless Sensor Networks .......................................................... 70
  Ang Gao, Wei Wei, and Zhixiao Wang

An Immune Danger Theory Inspired Model for Network Security Evaluation .......................................................... 74
  Feixian Sun, Mengrong Kong, and Shuyuan Deng

Interference Analysis of TD-LTE and TD-SCDMA System Coexistence .......................................................... 77
  Pei Chang, Yongyu Chang, Jing Zhou, and Dacheng Yang

A Hypervisor-Based Secure Storage Scheme .......................................................... 81
  Dan Wang and Dengguo Feng

Performance Analysis of Selection Combining in Decode-and-Forward Cooperative Diversity Networks over Weibull Fading Channel .......................................................... 87
  Yuejun Lei, Zhimin Zeng, and Weijun Cheng

An Incentive Congestion Control Strategy for DTNs with Mal-behaving Nodes .......................................................... 91
  Lei Yin, Hui-mei Lu, Yuan-da Cao, and Jian-min Gao
An Efficient Elliptic Curve Scalar Multiplication Algorithm Suitable for Wireless Network ................................................................. 95

Min Tian, Jizhi Wang, Yinglong Wang, and Shujiang Xu

A Robust On-Line Blind Separation Algorithm with Dynamic Source Number Based on Neural Network .................................................. 99

Li Hui, Shen Yue-hong, and Chen Shi-zhou

A Simplified Soft Decision Demapping Algorithm of 16-APSK Signals in AWGN Channels ............................................................................. 103

Enxin Yao, Shuai Yang, and Wei Jiang

Pointer-Type Meter Reading Method Research Based on Image Processing Technology .................................................................................. 107

Guan Yudong, Zou Yang, Huang Bowen, Zhang Hong, and Sang Dayu

Formal Analysis of Trust Chain .............................................................................................................................................. 111

Chen Li, Ruihua Li, Lu Zhuang, and Xing Zhang

A Novel AOS Virtual Channels Scheduling Algorithm Based on Frame Urgency .................................................................................. 117

Tian Ye, Zhang Wen-bo, Zhang Yan-qin, and Liu Qing-li

Impact of Pursuer Speed on the Performance of Distributed Surveillance Sensor Network .................................................................................. 121

Chaoliang Li, Md. Zakirul Alam Bhuiyan, and Yuehua Liu

A Modified Approach of Underdetermined Blind Source Separation in Time-Frequency Domain .......................................................... 125

Xishun Ren, Yuehong Shen, and Luoming Jian

Towards a Unified Framework for Network Survivability Measurement .................................................................................................. 129

Wang Chunlei, Wang Dongxia, and Dai Yiqi

A Method for Network Vulnerability Analysis Using Colored Petri Net .......................................................................................... 135

Dapeng Man, Qian Zhang, Wu Yang, and Wei Wang

Performance Evaluation of Relay-Aided Multi-cell OFDMA System ........................................................................................................... 139

Jing Yang, Jianping An, Lei Yuan, and Xiangming Li

Tasks Security Scheduling Based on DPSO in Heterogeneous Grid Environment .................................................................................. 143

Dongfeng Zhang, Hai Zhu, Yuping Wang, and Zihui Miao

A Reliable Routing Technology Based on Direction Judgment for Vehicular Network .................................................................................. 149

Hao Kun, Jin Zhigang, and Wang Beihe

An Efficient Control Method of Multi-copy Routing in DTN .............................................................................................................. 153

Hong Bian and Haizheng Yu

A Cross-Layer Resource Allocation Algorithm with Finite Queue for OFDMA System .................................................................................. 157

Gang Chen, Wenqiang Zhang, Xiang Zheng, and Xinrong Wu

Energy Efficient RF Front-Ends Architecture Design for Wireless Sensor Networks ...................................................................................................................................................................236

Ji-qiang Zhai, Hui-sheng Zhang, Ye Li, and Yu-wei Zhang

Alleviating the Impact of DNS DDoS Attacks ..................................................................................................................................................................................................................240

Li Wei-min, Chen Lu-ying, and Lei Zhen-ming

Optimal Positioning Algorithm in the Presence of Non-line-of-Sight Error ..................................................................................................................................................................................................................244

Xue Lin, Huamei Xin, Liu Ju, and Jingliang He

Group Iterative Linear ZF Reciever for MIMO-OFDM Systems ..................................................................................................................................................................................................................248

Zhongpeng Wang and Shaozhong Zhang

An Improvement to TF: Term Distribution Based Term Weight Algorithm ..................................................................................................................................................................................................................252

Xia Tian and Wang Tong

A Protocol for Bilinear Parings-Based Attestation ..................................................................................................................................................................................................................256

Ting Chen, Huiqun Yu, and Wei Chen

Adaptive Power Control for Wireless Communication Systems with Nonlinear Disturbances ..................................................................................................................................................................................................................261

Cunwu Han, Dehui Sun, and Yinghong Li

Loop-Based Dynamic Channel Assignment for Multi-radio Multi-channel Wireless Mesh Networks ..................................................................................................................................................................................................................265

Yan Xia, Yingzhi Zeng, Bin Fu, and Zhenghu Gong

Power Spectral Density Comparison for the Clipped OFDM-Type Signals ..................................................................................................................................................................................................................269

Teng Li, Su Hu, Gang Wu, Liang Yan, and Yun Luo

Chain of Trust Testing Based on Model Checking ..................................................................................................................................................................................................................273

Fan He, Huanguo Zhang, Hong Wang, Mingdi Xu, and Fei Yan

Fast and Accurate WSN Positioning in Emergency Logistics ..................................................................................................................................................................................................................277

Lai Xin, Li Jun, Zhong Wei, and Cao Yuan

Trust Service Discovery by Opinions Classification on Virtual Communities ..................................................................................................................................................................................................................281

Qing Zhu

Analysis of Web Security Comprehensive Evaluation Tools ..................................................................................................................................................................................................................285

Hui-zhong Shi, Bo Chen, and Ling Yu

Available Separation-of-Duty Policies in Access Control ..................................................................................................................................................................................................................290

Baoping Wang, Guang Zhao, Jun Liu, and Xingang Zhang

Research of Trust Chain Improvement Technology ..................................................................................................................................................................................................................294

Jiang Yi, Lv WeiKe, and Liu Xiangbin

A WiMax QoS Oriented Bandwidth Allocation Scheduling Algorithm ..................................................................................................................................................................................................................298

Xiaowei Mei, Zhiyi Fang, Yunchun Zhang, Jianfei Zhang, and Hao Xie

Cryptanalysis of Several Linkable Ring Signature Schemes ..................................................................................................................................................................................................................302

Huaqun Wang and Shuping Zhao

Cryptanalysis and Improvement of Several Digital Signature Schemes ..................................................................................................................................................................................................................306

Huaqun Wang and Shuping Zhao

A Direction Constrained Eigenspace-Based Beamforming Algorithm ..................................................................................................................................................................................................................310

Naiping Cheng, Shuyan Ni, and Zhengzhong Ni
Iterative LDPC-Hadamard Code-Aided Carrier Frequency Synchronization at Extremely Low SNR ..................................................................................................................314

Fajian Tang and Zhiping Shi

MODE-SUMWE Algorithm for Estimating DOA of Coherent Signals on Uniform Circular Array ........................................................................................................318

Hui Zhao and Hongjin Wang

Programmable Digital Front-End Design for Software Defined Radio .........................................................................................................................321

Lin Fei-yu, Qiao Wei-ming, Zhang Jian-chuan, Nan Gang-yang, Li Wei-bin, and Mao Wei-yu

Proxy Signature Scheme Secure against Chosen Key and Chosen Warrant Attacks ........................................................................................................325

Guozheng Hu and Lansheng Han

Image Steganalysis Based on Spatial Domain and DWT Domain Features .............................................................................................................................329

Changxin Liu, Chunjuan Ouyang, Ming Guo, and Huijuan Chen

The Analysis of Global Illumination Rendering Based on BRDF ...........................................................................................................................332

Wei Wang and Hong-yan Zhang

A Data Fusing Random Detection Method in Ad Hoc Networks .................................................................................................................................336

Liu Zhiyuan and Feng Shan

A Distributed Algorithm for Building Energy-Efficient Group-Shared Multicast Tree in Ad Hoc Networks ........................................................................................................341

Yuhong Luo, Jianxin Wang, and Weihua Gui

An On-Demand Scheduling Algorithm for Time-Sensitive Transactions in Bluetooth Wireless Personal Area Networks ........................................................................................................345

Tang Zhangjie, Pei Tingrui, Wang Xin, and He Yunhua

Chaos-Based Estimation Method for Software Reliability ...........................................................................................................................................350

Chenxi Shao and Chao Huang

Design of Complex Event Processing System for Wireless Sensor Networks ........................................................................................................354

Peng Li and Wang Bingwen

Luqun Li

Haiying Shang, Jianping An, and Wenfei Gong

Secure Short Hierarchical Identity-Based Signature in the Standard Model ..............................................................................................................366

Leyou Zhang, Yupu Hu, Qing Wu, and Xu'an Tian

A Network on Chip Architecture and Performance Evaluation ..........................................................................................................................370

Wang Zhang, Ligang Hou, Lei Zuo, Zhenyu Peng, and Wuchen Wu

A Summarization of Multimedia Resource Digital Rights Expression Language .............................................................................................................374

Di Wu and Yan Bao
Survivability Evaluation for MANET Based on Path Reliability ................................................................. 378
   Tong Wang, ChuanHe Huang, Kai Xiang, and KunXiao Zhou
An Effect Evaluation Model for Vulnerability Testing of Web Application .............................................. 382
   Du Jing-Nong and Lu Yan-Sheng
A New Constellation Mapping Scheme of MPSK in BICM-ID ................................................................. 386
   Changyou Guo
Research on Adaptive Modulation of MIMO MPSK Systems ................................................................. 390
   Changyou Guo
The Application Study of Learner's Face Detection and Location in the Teaching Network System Based on Emotion Recognition ................................................................. 394
   Shuai Liu and Wansen Wang
Intrusion Detection Based on Variable Prefix of System Call ............................................................... 398
   Qi Zheng and Shengyi Jiang
Design of Quasi-elliptic Filter for Optimizing the Band-Edge Selectivity ............................................ 402
   Ke Guan and Yong-Zhong Zhu
Security Properties Analysis of Routing Protocol for MANET .............................................................. 405
   Xu Donghong, Jiang Shujuan, and Qi Yong
A 19-ppm/°C Bandgap Voltage Reference Source ........................................................................... 409
   Shi-bin Lu and Ying Meng
A Puncturing Method for Ring Convolutional Coded Continuous Phase Modulation ................................................. 412
   Lei Zhang, Jinnan Nie, and Honghui Zeng
Design of Wireless Gateway Based on Hybrid Net Control System ................................................ 415
   Yao XiaoFeng, Wang ChangYou, and Chen XiaoXia
Performance of a Novel Relay-STBC-HARQ for Cooperative MIMO System ..................................... 419
   Chen Yonghui and Zhou Jinsong
The Study of Learners' Emotional Features in the E-learning System ....................................................... 423
   Yin Liu, Wansen Wang, Dian Liu, and Shuai Liu
Intelligent Psychological Counseling System Having Emotion Interaction Function ................................................. 427
   Zhiguo Tong and Wansen Wang
Study of Joint Turbo Codes and SC-FDE in Wideband Wireless Communication ....................................................... 430
   Xu Dinggen, Cheng Naiping, and Zhou Hui
Research on Coupling GIS and Multi-agent of Spatial Information ....................................................... 433
   Peng Yi, Meng Lingkui, and Lin Chengda
Research on Modeling of Multiparty Trust Negotiation Based on Coloured Petri-net in P2P Network ....................................................... 437
   Li Yonghao and Liu Yun
Research on Security of Mobile Payment Model Based on Trusted Third Party ................................................. 442
   Wei Feifei
Improving Lookup Performance Based on Kademlia ..........................................................446
   Chunzhi Wang, Nan Yang, and Hongwei Chen

Research the Access Control Strategy on P2P Based on Interest Classify, Trust and Security Grade ..........................................................450
   Chen Yanhua and Liu Yihe

Research on Trust-Authorization-Based Access Control Model for Web Services ..........................................................454
   Zhang Yong-sheng and Wang Ying

An Improved Coverage Scheme Based on Cellular Automata in WSN ..........................................................458
   Sheng Wang and Hao Wu

The Statistical-Sakagami Model for the 4G Mobile Communication Systems ..........................................................462
   Yihuai Yang, Yonggang Xie, and Wei Wang

A Dual Channel-Based Energy Efficient and Low Latency MAC Protocol for WSNs ..........................................................466
   Guoqiang Zheng, JiAntao Fu, Shengyu Tang, Yingbo Li, and Zhongwei Dong

Research and Implement of DRM Baseband Encoder and Modulator Based on Embedded System ..........................................................470
   Nanhao Zhu, Zhengxiang Li, and Qinbin Lu

Research of the Improved Traditional MDA ..........................................................475
   Zhang Jing Jun and Wei Fei

A Research of Trusted Information System Based on Cooperative Sub-optimum Principles ..........................................................479
   Ping He and Jia Mi

A Single Sign-On Scheme for Cross Domain Web Applications Using Identity-Based Cryptography ..........................................................483
   Yanjian Wang, Qiaoyan Wen, and Hua Zhang

Security Bootstrap Based on Trusted Computing ..........................................................486
   Yu Chao and Yuan Meng-ting

Security Evaluation for Wireless Network Based on Fuzzy-AHP with Variable Weight ..........................................................490
   Runfu Zhang, Lianfen Huang, and Mingbo Xiao

The Analysis of Security Weakness in BitLocker Technology ..........................................................494
   Jiang Yi-ming and Liu Sheng-li

Reputation-Based Trust Model and Anti-attack Mechanism in P2P Networks ..........................................................498
   Xiaoning Jiang and Lingxiao Ye

Novel UWB Communication Pulse Design Method ..........................................................502
   Bin Xia and Nan Xie

A Novel Similarity Measure Framework on Financial Data Mining ..........................................................505
   Zhai Fangwen, Yang Zehong, Song Yixu, and Liu Yi
Discussion on Roller Procedures Fast Drawing System Based on AutoCAD
Second Development ..............................................................................................................509
  Wei-bei Zheng, Xiao-ying Gu, and Cai Liu
Software Trusted Comprehensive Evaluation Model Based on Fuzzy Grey
Method ........................................................................................................................................513
  Yu Song and Ling Wang
Study on the Optional Route Algorithm of the ArcGIS Network-Based
Improved Road Traffic ...........................................................................................................517
  Huang Da-bing and Liu Jian-chuan
Research on Knowledge Exchange Duopoly Game Model of Supply Chain
Enterprise Based on the Cournot Model ................................................................................521
  Ma Jun, Yu Hong-guo, Yang De-li, and Wu Yan
Analytical Hierarchy Process and Fuzzy Theory Applied to Urban Rail Transit
Operation Opinion ................................................................................................................525
  Teng Hongan
Architecture and Application Framework for Digital Hospital ............................................528
  Xin-Ping Hu, Zhi-Mei Zhang, Kui Jiang, and Jian-Cheng Dong
Design of SHA-1 Algorithm Based on FPGA .......................................................................532
  Cheng Xiao-hui and Deng Jian-zhi
A Remote Home Security System Based on Wireless Sensor Network
and GSM Technology ..............................................................................................................535
  Huiping Huang, Shide Xiao, Xiangyin Meng, and Ying Xiong
Research on Profile Generation and Manufacturing of Meshing Pairs
for Single Screw Compressor ...............................................................................................539
  J.J. Mao, K. Wang, X.W. Sun, and Y. Shen
Proxy Ring Signature Based on Bilinear Scheme .................................................................542
  Jianyong Wang, Fang Zheng, Junxia Li, and Yu Huang
The Hardware Design of Dual-Mode Wireless Video Surveillance System
Based on DM6437 ................................................................................................................546
  Kang Liping, Zhao Zhefeng, and Xie Gang
Design of the Urban Public Logistics Information Platform ................................................550
  Zhu Yanru, Mao Lina, and Zhou Guiliang
Design of XML Web Services Based E-government Heterogeneous Platform ..................554
  Zhang Rong-xi and Zhang Yan-mei

### Volume 2

1. **Geometrically Invariant Color Image Watermarking Using Mean-Based 2D Color Histogram**
   - Shengli Yang, Jun Gao, and Rui Sun
   - Page 3

2. **Direction Finding via Beam Scanning and Sparse Reconstruction**
   - Ruiming Yang, Yipeng Liu, Qun Wan, and Wanlin Yang
   - Page 7

3. **Communication Scheme in Trusted Sensor Network**
   - Jun Peng, Yanfen Fan, Fu Jiang, Xiaoyong Zhang, and Kuo-Chi Lin
   - Page 10

4. **Trust and Reputation Based Model Selection Mechanism for Decision-Making**
   - Bo Zhang, Yang Xiang, and Qiang Xu
   - Page 14

5. **An Energy Efficient Clustering Algorithm in Large-Scale Mobile Sensor Networks**
   - Jianbo Li and Shan Jiang
   - Page 18

6. **Combined Fountain Code with Network Coding in Cooperative Communication**
   - Jing Yang, Jianping An, Xiangming Li, and Lei Yuan
   - Page 24
Bit Level Adaptive Interleaving for WiMAX .................................................................101
  Hao Wang, Hongwen Yang, and Mingyue Ma
Performance Analysis of Discrete-Rate Adaptive Modulation with Space-Time
Coding in Multiple Antennas System ...........................................................................105
  Xiangbin Yu, YanFeng Li, TingTing Zhou, and Dazhuan Xu
Analysis and Improvements over DoS Attacks against IEEE 802.11i Standard ..........109
  Li Wang and Balasubramaniam Srinivasan
On an IBA Topology Model for Internet Topology Structure .....................................114
  Ye Xu and Zhuo Wang
Routing Space Internet Based on Dijkstra's Algorithm ..............................................118
  Xiang-ying Li, Guo-shun Li, and Sheng-tian Zhang
A Link Importance Evaluation Method Based on the Characteristic of Network
Communication .............................................................................................................122
  Yu Jiang and Aiqun Hu
PAPR Analysis for Single-Carrier FDMA MIMO Systems with Space-Time/Frequency Block Codes .................................................................................................126
  Ge Quan, Jin Yan-liang, Shi Zhi-dong, and Miao Hui-jun
Networks .......................................................................................................................130
  Linfeng Liu
The Novel Contention Window Control Scheme for IEEE 802.11 Mac Protocol ........134
  Ali Balador and Ali Movaghar
Spatial Correlation Clustering Algorithm for Data Gathering in Wireless
Sensor Networks ..........................................................................................................138
  Hao Jutao and Zhao Jingjing
Intrusion Detection System Based on Principal Component Analysis and Grey
Neural Networks ...........................................................................................................142
  Dong-Xue Xia, Shu-Hong Yang, and Chun-Gui Li
Designing of Fountain Codes in Cooperative Relay Systems .....................................146
  Lin Xuehong, Xie Fei, and Lin Jiaru
Improving Content Authentication Efficiency of Online Multimedia Service ..........150
  Liangbin Li, Jinlin Wang, Erli Niu, and Xue Liu
CL-PKC-Based Secure Multicast Communication for P2P Network .........................154
  Huaiqing Lin, Qian Zhang, and Yonghong Zhou
A Fuzzy Trust Model with Punishment Mechanism ....................................................158
  Huaiqing Lin, Zhengbin Hu, and Yonghong Zhou
Improving the Accuracy of GPS Positioning with an Exponential Stochastic
Model .......................................................................................................................162
  Jizhong Li
Relation-Oriented Mobility Management ................................................................. 241
Yu Liu, Qiang Shen, Zhijun Zhao, and Hui Tang

A Usage-Based Authorization Architecture for Multidomain Environments ............. 245
Guang Zhao, Junli Lu, Fan Yang, and Jiajun Li

A Fuzzy Set Based Dynamic Trust Model for Heterogeneous Wireless Networks ................................................................. 249
Xiaojun He, Kaizhi Huang, Peng Zhang, and Xingguo Luo

Simplex Optimization Localization Algorithm for Wireless Sensor Networks .............. 254
Shaoping Zhang and Guohui Li

Modeling of Learning Inference and Decision-Making Engine in Cognitive Radio ................................................................. 258
Yuqing Huang, Jiao Wang, and Hong Jiang

A DNS Based Anti-phishing Approach .................................................................. 262
Sun Bin, Wen Qiaoyan, and Liang Xiaoying

A Quick Distributed Soft Handoff Method in CDMA System Based on Mobile Agent ........................................................................ 266
Zhou He, Fei Ye, Chuanbiao Wang, Junyao Mei, Wei Li, Zhiyong Tao, and Dexiu Huang

Finding Coding Opportunities in the Air ............................................................. 270
Gao Wei, Liu Shengli, Gao Peng, and Zheng Fuzhong

Blind Channel Estimation Algorithm with Simplified Implementation for OFDM System ...................................................................... 274
Zhu Wensheng, Li Youming, Zhou Xinxing, and Yu Jianding

Protection of Program Integrity Based on Trusted Computing ................................ 278
Xiang Ling, Li Wan, and Guoqing Wu

NLSBT: A Localization Scheme for Underwater 3D Acoustic Sensor Network .............. 282
Liao Jun'guo, Zhu Bin, and He Yong

An Improved Routing Protocol in WSN with Hybrid Genetic Algorithm ...................... 289
Lejiang Guo and Qiang Tang

Research on Reputation Evaluation Model for WSN Nodes Based on Vertical and Horizontal Analysis ................................................................. 293
Wu Yang, Xingguo Ma, Wei Wang, Dapeng Man, and Guangzhao Gao

Approaches of Spectra in Evaluations of Internet Topology Graph ................................ 297
Bin Zhu and Ye Xu

An Admission Control Scheme for Sensor Networks .............................................. 301
Wang Xiaoming, Yao Guoxiang, and Zhang Zhen

A Modulation Scheme for Ultraviolet Communication by Switching the Frequency of Light Power Envelope .................................................... 305
Tian Pei-gen, Wang Ping, Guan Jian-xin, and Pan Chen

Multi-source Distributed Video Coding in Wireless Video Sensor Networks for Water Conservancy Engineering ..................................................... 309
Zhang Mei-Yan and Cai Wen-Yu
Stationary Properties of Random Direction Models ................................................................. 313

Yan-tao Liu

A New Authentication and Signature Scheme Based on the Conjugacy Search Problem ................................................................. 317

Guangguo Han and Chuangui Ma

A Control Method of System Self-Management for Distributed Systems .................................................. 321

Zhiping Zheng

Study on the Communication Performance of GNSS Baseband Signals and Its Software Development ................................................................. 327

He Chengyan, Lu Xiaochun, and Wang Xue

Cross Layer Distance Availability between the Nodes in 802.11 Mobile Ad Hoc Networks ................................................................. 332

Anbao Wang and Cuihong Wu

Weighting Adjustment Acquisition Method for the DSSS Signal ................................................................. 336

Da Teng, Zheng Yao, Xiaowei Cui, Mingquan Lu, and Zhenming Feng

S-AODV: Sink Routing Table over AODV Routing Protocol for 6LoWPAN .................................................. 340

Zhongyu Cao and Gang Lu

The Analysis of the MAC Protocol of Two-Class Priority Station Polling System under Mixed Services Policy of Exhaustive and Two-Times Gated Services ................................................................. 344

Bao Li-yong, Zhao Dong-feng, and Ding Hong-wei

Research of Dynamic Spectrum Allocation Based on Service Demand ................................................................. 348

Shi-biao He, Xin-chun Zhang, Li-jia Ge, and Pan He

Authenticated Key-Exchange Scheme Based on SGC-PKE for P2PSIP ................................................................. 352

Hua Jiang, Rui Zhang, and Yongxing Jia

A Complete Anonymous Group Key Agreement Protocol ................................................................. 357

Gang Yao and Dengguo Feng

Resisting RST Watermarking Algorithm for Image Content Authentication ................................................................. 361

Lintao Lv, Liang Hao, and Hui Lv

The Implementation and Optimization of Data Conversion between UART and WLAN ................................................................. 365

Ji Li and Jianhua Shen

Protocol for Dynamic Component-Property Attestation in Trusted Computing ................................................................. 369

Yan Jianhong and Peng Xinguang

Quantum Cryptographic Network Using Entanglement Swapping ................................................................. 373

Dexi Zhang, Qiuyu Zhao, and Xiaoyu Li

The Research of Sync-search Scheme in DVB-S Receiver ................................................................. 377

Yi Zhigiang and Li Yun

Solving Six-Hump Camel Back Function Optimization Problem by Using Thermodynamics Evolutionary Algorithm ................................................................. 381

Wang Xuan, Lin Yan-e, and Huang Dan

Design of Passive RFID Reader Based on Mobile Phone ................................................................. 446
   Zhang Ping-chuan and Ma Guo-feng

Studies on Assessment Methods of Dynamic Protection Capability In Security Systems ................................................................. 450
   Peng Yongjun, Chen Jinming, Guo Xi, Wan Zi, and Wu Lihua

The Model of Trusted Network Connect Based on Credibility of the Hierarchy ................................................................. 454
   Juan Fang and Hongli Zeng

A Formal Proof of Pasting Lemma in Isabelle/HOL .............................................................................. 458
   Jianlin Wang, Liangyu Chen, and Zhenbing Zeng

Deception Methodology in Virtual Honeypots .................................................................................. 462
   Mahmoud T. Qassrawi and Zhang Hongli

A Distributed Spatial Cloaking Protocol for Location Privacy ....................................................................... 468
   Huang Zhangwei and Xin Mingjun

Distributed High-Frequency RFID Antennas for Smart Storage Racks ......................................................... 472
   Xiafei Wang, Hongjin Wang, and Gang Wang

Towards Remote Attestation of Security Policies .................................................................................. 475
   Qian Zhang, Yeping He, and Ce Meng

Design of Monitoring and Control Plant Disease System Based on DSP&FPGA ......................................................... 479
   Chunxia Zhang, Xiuqing Wang, and Xudong Li

Research on Network Security Situation Prediction-Oriented Adaptive Learning Neuron ................................................................ 483
   Jing Li and Chunbo Dong

A Fully Integrated 5GHz Balanced SiGe HBT Power Amplifier Design ......................................................... 486
   Chen Lei, Ruan Ying, and Lai Zong-sheng

Flexible Service Architecture for Maritime Business Promotion Based on Mobile Technology .................. 490
   Bin Yang, Yang-Yang Hao, Jie Wang, and Zhi-Hua Hu

Application and Analysis of ZigBee Security Services Specification ......................................................... 494
   Hongwei Li, Zhongning Jia, and Xiaofeng Xue

Research and Application on Application-Oriented Event-Based Middleware of WSNs .................... 498
   Qingfeng Li, Chen Li, and Jifang Shi

A Unified Metric Method of Information Loss in Privacy Preserving Data Publishing .............................................. 502
   Lv Pin, Yu Wen-bing, and Chen Nian-sheng

Identity Based Proxy Re-encryption Based on a Variant of BB1 Identity Based Encryption ........................................................................... 506
   Yi Ding and Xu An Wang
CCA-secure Identity Based Proxy Re-encryption Based on a Variant of BB1
IBE .............................................................................................................................................................................510

   Xu An Wang, Xiaoyuan Yang, and Junru Hu
Study on Customer Retention under Dynamic Markets .................................................................514
   Zeling Wang and Xinghui Lei
Research on a Software Trustworthy Measure Model ........................................................................518
   Benhai Yu, Qing Wang, and Ye Yang
Research of Heterogeneous Information Resources Automatic integration Based on Intelligent Agents and Grid .................................................................522
   Qu Jubao, Li Lingrui, Pan Junhong, and Liu Jing
Improving the QoS in IEEE 802.11e Based on the Method of Virtual Heap Tree ....................................................526
   Anbao Wang and HaiLan Pan
The Research of an "Expert Information" Data Fusion Technology in Real Estate Valuation .................................................................529
   Huabg Da-bing and Yang Zhi-qiang
Research on the Identity in Heterogeneous Wireless Integrated Networks ........................................533
   Yang Xin, Li Chong, Ji Xin-sheng, and Huang Kai-zhi
A Hybrid Group Key Management Architecture for Heterogeneous MANET ........................................537
   Wei Chu-yuan
An Intrusion-Tolerant Model Based on Dynamic Threshold Mechanism ........................................541
   Fang Zhou, Hua Sun, and Xuefeng Zheng
An Ontology-Based Proposal to Formalize Secure Sessions in Web Services ........................................545
   Ye Xiaolie and Liao Lejian
Research of Handover Mechanism between GSM and TD-SCDMA ................................................549
   Jiang Hua and Xiong Can
Based on 2.4G Wireless Communications System Design ....................................................553
   Jiang Xiaolin, Gu Xuemai, and Li Hailun
Design of Data Acquisition and Control System Based on FPGA and DSP in Ultrasonic Inspection of Pipelines .................................................................557
   Xi-Peng Yin, Yang-Yu Fan, Zhe-Min Duan, Wei Cheng, and You Li
A Modified ID-based Anonymous Proxy Signature from Bilinear Pairings ........................................560
   Aimei Yang and Yan Zhou
