International Symposium on Recent Developments in Advanced High Strength Steels Processing 2008

Held at the 47th Conference of Metallurgists (COM) 2008

Winnipeg, Manitoba, Canada 24-27 August 2008

Editors:
P. Wanjara  A. M. Elwazri

ISBN: 978-1-61738-611-4
# Table of Contents

**Recent Developments in Advanced High Strength Steels Processing**

- Foreword ....................................................................................................................... iii
- Editors’ Biographies........................................................................................................... v
- Symposium Session Chairs....................................................................................................... vii

## PROCESS CONTROL, PHYSICAL METALLURGY AND MECHANICAL PROPERTIES

Neutron Scattering Methods Provide Insights into the Effects of Thermomechanical Processing on the Properties and Structure of Steels ................................................................. 3  
  *M.A. Gharghouri*

Hot Workability of Duplex Stainless Steels ..................................................................................... 15  
  *H.J. McQueen*

Processing to Obtain Grain Refinement and Improved Mechanical Properties.................................... 33  
  *A.M. Elwazri, P. Wanjara, R. Varano, G.R. Stewart, S. Yue and J.J. Jonas*

Microstructural Design of Multiphase Advanced High Strength Steels ................................................. 45  
  *A. Mark, D. Boyd, J. McDermid and D. Embury*

## MULTIPHASE MICROSTRUCTURAL PROCESS DEVELOPMENT

Deformation Behaviour of Ultrafine Grained Steel Produced by Cold Rolling of Martensite ............... 59  
  *S. Malekjani, I. Sabirov and P.D. Hodgson*

Effect of Grain Size on Deformation Twinning Behaviour of High Mn Steel............................................ 71  
  *A. Ghaderi, I. Sabirov and M.R. Barnett*

Effect of Grain Size and Martensite Fraction on the Dynamic Factor of Dual Phase Steel Microstructures .................................................................................................................. 83  
  *J. Qu, W. Dabbousi, J. Nemes and S. Yue*

Multistage Rolling Simulation of Fe-2.7Si Steel .................................................................................. 93  
  *A. Shen, M. Abdel-Rahman and H.J. McQueen*

Design of Rolling Schedules using OPTILAM .................................................................................. 103  
  *B. Peña, M. Arribas, A.R. Carrillo, J.I. Barbero, J. Calvo and S. Yue*

## HIGH STRENGTH STEEL DEVELOPMENT FOR INDUSTRIAL APPLICATIONS

Development of High Strength Line Pipe for Arctic Applications ......................................................... 117  
  *L.E. Collins, R. Klein and D. Bai*

Low Temperature Creep Behaviour of the Pipeline Steels ..................................................................... 131  
  *W. Chen, H. Zhu and S-H. Wang*
Use of the Holloman-Jaffe Tempering Parameter in the Development of High-Strength Steel Plate .................................................................147
J. Jordan, R. Bodnar and J. Dorriscott

Effect of Surface Processing Variables on Hydrogen Embrittlement of Steel Fasteners Part 1: Hot Dip Galvanising ..........................................................................................................................159
S. Brahimi, S. Rajagopalan, S. Yue and J.A. Szpunar

Effect of Surface Processing Variables on Hydrogen Embrittlement of Steel Fasteners Part 2: Electroplating and Non-Electrolytic Processes ..............................................................................................................171
S. Brahimi and S. Yue

The Influence of the Chemical Composition on the Hot Deformation Characteristics of Pipeline Steels ..................................................................................183
X. Lou, J. Calvo, A.M. Elwazri, D.Q. Bai and S. Yue

CHARACTERIZATION OF THE MECHANICAL BEHAVIOR OF MATERIALS AND JOINTS

Assessing Mechanical Property Gradients Associated with Microstructural Changes in Stainless Steel Weldments by Shear Punch Testing ........................................................................................................195
P. Wanjara and M. Jahazi

Load versus Displacement Characteristics from Hemispherical Punch Stretching Tests for Sheets and Fe Based Forming Limit Prediction ........................................................207
Q. Situ and M.K. Jain

The Influence of Heat Input on the Fracture and Metallurgical Properties of HSLA-65 Steel Welds .......................................................................................................................219
C.J. Bayley and A. Mantei

Resistance Spot Welding Characteristics and Mechanical Properties of Galvannealed HSLA 350 Steel ......................................................................................................................229
M.S. Khan, S.D. Bhole, D.L. Chen, G. Boudreau, E. Biro and J.V. Deventer

CONTINUOUS CASTING RESEARCH AND DEVELOPMENT

High Temperature Adventures in the Near Net Shape Casting of Sheet Metal Products, and their Potential Implications for the Future of Steel Sheet Production .....................................................................243
R.I.L. Guthrie

Measuring the Steel Temperature and Slag Thickness in a Tundish on a Continuous Basis ................................................................................257
F. Mucciardi, Z. Yuan and N. Madani

A CFD Study of Argon Gas Injection and Entrapment in Continuous Steel Slab Casting Processes ......................................................................................................................271
M. Hasan and S.H. Seyedein

Effect of Nozzle Configuration on Cooling of Hot Moving Steel Plates .........................................................................................................287
G.A. Franco, M.A. Wells and M. Militzer

Rapid Carburizing of Low-alloyed Steels by LINTERPROCESS™ (Liquid Internal Thermo-Chemical Processing) .................................................................................................299
S.M. Gugel and G. Ostrovsky
