19th Analysis and Computation Specialty Conference 2010

Orlando, Florida, USA
12-15 May 2010

Editors:

Sivaji Senapathi
Kevin Casey

Marc Hoit

ISBN: 978-1-61738-619-0
TABLE OF CONTENTS

NONLINEAR ANALYSIS METHODS FOR EARTHQUAKE ENGINEERING

Sensitivity of Dynamic Response of Bridges under Multiple Hazards to Aging Parameters ........................................... 1  
  J. E. Padgett, J. Ghosh, N. Anaei

Probabilistic Estimates of Acceleration Demands for Nonstructural Components Attached to Shear Wall Structures ............................................................................................................................... 13  
  R. A. Medina, J. S. Clayton

New Concepts in Modeling Damping in Structures ............................................................................................................................... 25  
  Adam Bowland, Finley Charney

Probabilistic Seismic Demand Analysis of RC Shear Walls Considering Soil-Structure Interaction Effects .................................................................................................................................... 37  
  Y. Tang, J. Zhang

Nonlinear Modeling of the Post Peak Degradation of Nonstructural Components in Light Frame Structural Systems ............................................................................................................................... 48  
  H. Heredia, C. B. Chadwell

METHODS AND TOOLS FOR PERFORMANCE-BASED EARTHQUAKE ENGINEERING

A Practical Approach for Assessing Structural Resistance to Earthquake-Induced Collapse ........................................... 58  
  Abbie Liel, Hesham Tuwair

Drift Demand Model for Bridge Columns Considering Shear-Flexure Interaction ............................................................................................................................................................... 70  
  J. Zhang, S.-Y. Xu, Y. Tang

Seismic Analysis of Beams on Two-Parameter Foundations ............................................................................................................................... 83  
  T. Ravi S. Mullapudi, Ashraf Ayoub

n-Spectra, A New IM for Improved Structural Response Assessment ....................................................................................................................................... 94  
  W. P. Graf, Y. Lee, C. A. Goulet

Effects of Foundation Configuration Variation on Seismic Response of Moment-Frame Buildings ........................................... 105  
  ZhiQiang Chen, Tara C. Hutchinson, Prishati Raychowdhury

MULTI-FUNCTIONAL SENSING FOR STRUCTURAL HEALTH MONITORING

Piezoelectric and Mechanical Performance Characterization of ZnO-Based Nanocomposites ........................................... 117  
  Yingjun Zhao, Kenneth J. Loh, Donghee Chang

Integration of Biosensors for More Efficient Structural Health Monitoring ....................................................................................................................................... 128  
  Salam Rahmatalla

Smart Aggregate-Based Damage Detection of Circular RC Columns under Cyclic Combined Loading ....................................................................................................................................... 140  
  Yashar Mosleh, Haichang Gu, Abdeljalil Belarbi, Y. L. Mo, Gangbing Song

Mobile Sensor Networks: A New Approach for Structural Health Monitoring ....................................................................................................................................... 159  
  Dapeng Zhu, Xiaohua Yi, Yang Wang, Jiujie Guo, Kok-Meng Lee

MWCNT Based Thin Film Strain Sensor ....................................................................................................................................... 169  
  Srivishnu M. Vemuru, S. Nagarajaiah, Pulickel M. Ajayan

A New Signal Processing Method Based on Intrinsic Frequency ....................................................................................................................................... 179  
  Ping Gu

SYSTEM RELIABILITY, STABILITY, AND BEHAVIOR OF BRIDGES

Sensitivities in Repair Cost and Repair Time Metrics for Seismic Bridge Response ........................................... 201  
  K. R. Mackie

Augmented System Level Failure Events for Bridges under Earthquake Hazards ........................................... 213  
  Leonardo Dueñas-Osorio, J. E. Padgett

Sensitivity Analysis of Seismic Fragility Curves for Skewed Multi-Span Simply Supported Steel Girder Bridges ....................................................................................................................................... 226  
  I. Sullivan, B. G. Nielson
Modal Analysis of Isolated Bridges with Transverse Restraints at the End Abutments
Nicos Makris, Georgios Kampas, Dimitra Angelopoulou

Simplified Guidelines for Checking Single Steel I-Girder Stability under Erection through AASHTO LRFD and FEA
Qiuhong Zhao, Baolin Yu, Edwin G. Burdette, John S. Hastings

KEY FINDINGS FROM THE STRUCTURAL CONTROL BENCHMARK PROBLEMS

A Review of Benchmark Study on Response Control of Seismically-Excited Highway Bridges
Y.-J. Cha, S. Narasimhan, A. K. Agrawal, S. Nagarajaiah

Key Findings from the Nonlinear Benchmark for Seismically Excited Buildings
Richard Christenson, Zhaoshuo Jiang

A Review of Benchmark Study on Response Control of Wind-Excited Tall Buildings
Y.-J. Cha, A. K. Agrawal

Key Findings from the Nonlinear Base-Isolated Benchmark
S. Narasimhan, S. Nagarajaiah

Development of the Test Bed Structures for Structural Control Research
Pei-Yang Lin, Chin-Hsiung Loh

STATE OF THE ART RESEARCH IN STRUCTURAL CONTROL

Experimental Studies on an Adaptive Tuned Mass Damper with Real-Time Tuning Capability
A. J. Roffel, R. Lourenco, S. Narasimhan

NEESR-Adapt-Struct: Semi-Active Control of ASD Device - Adaptive Length Pendulum Dampers
S. Nagarajaiah, D. T. R. Pasala

Evaluation of Structural Control Strategies for Improving Seismic Performance of Buildings with MR Dampers Using Real-Time Large-Scale Hybrid Simulation
Yunbyeong Chae, James M. Ricles, Richard Sause

Experimental Verification of an MR Damper Controlled Highway Bridge
Zhaoshuo Jiang, Richard Christenson

EMERGING TRENDS IN STRUCTURAL ENGINEERING EDUCATION AND PRACTICE

China Megastructures: A Different Capstone Experience
Richard Balling

A Radical Rethink in Educating Engineering Students
Yaqub Rafiq

Visualization and Assessment of the Aging Infrastructure Using Self-Organizing Map
Sungmoon Jung, John O. Sobanjo, Gustavo J. Munoz

Design-Oriented Structural Engineering Education
Kyoung Sun Moon

Combining Hybrid Assembly to Order Business Strategies with Structural Design & Lean Engineering Process Automation
V. Letchchouk, C. J. Martin

Management Information Systems in Structural Engineering
J. E. Krajewski

STATE OF THE ART AND FUTURE CHALLENGES IN STRUCTURAL OPTIMIZATION PART I

Hybrid Cellular Automaton: A Novel Framework for Non-Linear Topology Optimization
Kapil Khandelwal, Andrés Tovar

Optimal Wind Resistant Performance-Based Design of Tall Buildings
C. M. Chan, M. F. Huang

Reinforced Concrete Design with Topology Optimization
James K. Guest, Christopher D. Moen
STATE OF THE ART AND FUTURE CHALLENGES IN STRUCTURAL OPTIMIZATION PART II

Benchmark Problems in Structural Design and Performance Optimization: Past, Present, and Future
- Part I............................................................................................................................................. 455
  Arzhang Alimoradi, Christopher M. Foley, Shahram Pezeshk
Consideration of Practical Design Issues in Formulating Structural Optimization for Design
  Automation ........................................................................................................................................ 467
  Michael Gustafson
Challenges and Advances in System Reliability-Based Optimization of Structural Topology .......... 480
  T. H. Nguyen, J. Song, G. H. Paulino

ADVANCED STRUCTURAL ANALYSIS METHODOLOGIES

An Integrated Thermomechanical Method for Modeling Fiber Reinforced Polymer Composite
  Structures in Fire ............................................................................................................................ 492
  Ziqing Yu, Aixi Zhou
Development of Analysis Tools for RC Members Subjected to Three-Dimensional Combined Loads ..... 504
  T. Ravi S. Mullapudi, Ashraf Ayoob
Mixed Formulation for Composite and RC Frame Element with Bond-Slip ..................................... 516
  C.-L. Lee, F. C. Filippou
Multi-Hazard Evaluation of Steel Frame Subsystem Stability Considering Damage Mapping from
  Extreme Lateral Loading ................................................................................................................ 528
  Charlie Burchfield, Tezeswi Tadepalli, Chris Mullen
